## Basic Survey (Radiation Dose Estimates) Reported on 7 February 2014

1. Simplified questionnaire

From the end of November through mid-December in 2013, we sent simplified questionnaires to those eligible for Thyroid Ultrasound Examination (around 250,000 excluding residents of nationally designated zones) who had not yet responded to the original questionnaire.
In addition, surveys were distributed at municipal offices and by mail on request.
As of 31 December 2013, 28,455 have responded to the simplified questionnaire, which increased the response rates to $25.0 \%, 1.4 \%$ up from the previous one.

| Response rates to the simplified questionnaire of the Basic Survey |  |  |  |
|  |  |  |  |
| As of 31 December 2013 |  |  |  |
| Target population |  | 2,056,994 |  |
| Response | Original questionnaire | 486,757 | 23.7\% |
|  | Simplified questionnaire* | 28,455 | 1.4 |
|  | Total | 515,212 | 25.0\% |

*Preliminary figures
Fractions have been rounded.
2. Response Rates and Radiation Dose Estimates (Original and Simplified Questionnaires Combined)

### 2.1 Response Rates of Residents

The overall effective response rate to the Basic Survey (radiation dose estimates), which targeted the entire population of Fukushima Prefecture, was $25.0 \%(515,212 / 2,056,994)$ as of 31 December 2013. Regional variations in the response rates were observed, with $44 \%$ in the Soso area. In Aizu and Minami-aizu, response rates went up from $13 \%-15 \%$ to $16-17 \%$. (Table 2)

### 2.2 Radiation Dose Estimates

Recorded movements of respondents are converted to digital data, and effective external cumulative doses are calculated using the dose calculation system developed by the National Institute of Radiological Sciences. Doses have been estimated for 470,234 of 515,212 respondents ( $91.3 \%$ ) as of 31 December 2013, and the results have been returned to 460,733 respondents. (Table 2)

| Table 2 |  | sponse rat | to the B | asic Surve |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| Iwaki | 343,831 | 79,949 | 23.3\% | 73,602 | 92.1\% | 71,052 | 88.9\% |
| Total | 2,056,994 | 515,212 | 25.0\% | 470,234 | 91.3\% | 460,733 | 89.4\% |
| Including Yamakiya of Kawamata, Namie and litate. |  |  |  |  |  |  |  |

### 2.3 Response Rates (Visitors)

The survey questionnaire was distributed upon request to non-residents who were visiting or staying in Fukushima Prefecture at the time of the accident. Of 2,073 responses, doses have been estimated for 1,859 respondents ( $89.7 \%$ ), and the results shall be returned accordingly. (Table 3)

Table 3 Response rates to the Basic Survey

|  | (Visitors) |  |  |  | As of 31 December 2013 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Number of request | Response | Response rates $\mathrm{c}=\mathrm{b} / \mathrm{a}$ | Completed dose estimation | Proportion $\mathrm{e}=\mathrm{d} / \mathrm{b}$ | Returned results | Proportion $g=f / b$ |
| 3,804 | 2,073 | 54.5\% | 1,859 | 89.7\% | 1,782 | 86.0\% |

## 3. Results of Radiation Dose Estimates

Radiation doses for a total of 470,234 residents have been estimated to date. The results for 460,408 respondents (excluding radiation workers) suggested that the doses for more than $90 \%$ of the respondents were $<2 \mathrm{mSv}$ in Kempoku and Kenchu areas. The doses for approximately $91 \%$ of the respondents in Kennan area and more than $99 \%$ of those in Aizu and Minami-aizu were $<1 \mathrm{mSv}$. Doses for about $78 \%$ of respondents in the Soso area and more than $99 \%$ of respondents in Iwaki were also $<1 \mathrm{mSv}$. (Table 4)

| Estimated external radiation doses in the first four months (preceding and full-scale survey) As of 31 December 2013 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

## 4. Evaluation of the results

The latest effective radiation dose estimates showed similar trends to those observed so far.
Since previous epidemiological studies ${ }^{1}$ indicate no significant health effects at doses $\leq 100 \mathrm{mSv}$, we concluded that radiation doses estimated so far are unlikely to cause adverse effects on health, although this conclusion is based on external radiation doses estimated only for the first four months following the accident.

## Thyroid Ultrasound Examination, Fukushima Health Management Survey

Reported on 7 February 2014

## 1. Summary

### 1.1 Thyroid Ultrasound Examination (TUE) Program

The TUE Program for the fiscal year 2013 started on 22 April 2013, and roughly 158,000 children from 34 municipalities have participated in the program so far. With an increase in the number of participants including those from past target municipalities, the program has covered $80.8 \%$ of the target population to date (Appendix 1).
Starting on 1 November 2012, the TUE Program has been carried out at institutions outside Fukushima Prefecture (Appendix 2). The results have been returned to $94.4 \%$ of the 269,354 participants (Appendices 3 and 4 ).

Screening test coverage as of 31 December 2013 (last screening on 15 November 2013)

|  | Target Population <br> a | Participants |  | Proportion (\%)$\mathrm{c}(\mathrm{c} / \mathrm{b})$ | Test results |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

[^0]
### 1.2 Confirmatory Examination

The number of children who required further testing is 1,796 , of whom $83.0 \%$ underwent the confirmatory testing. Among them, $90.1 \%$ have completed the tests (Appendix 5). In addition to Fukushima Medical University Hospital, two institutes, in Koriyama and Iwaki respectively, have provided confirmatory testing since late July 2013. Confirmatory testing outside Fukushima Prefecture has started in November 2013.

Confirmatory testing coverage and results as of 31 December 2013

|  | Number of children requiring confirmatory test <br> a | Participants <br> Proportion (\%) <br> b (b/a) | Confirmatory test coverage (\%) <br> c (c/b) | Confirmed test results |  |  |  |

|  |  |  |  | Next screening advised |  | Follow-up advised |  |
|  |  |  |  | $\begin{gathered} \text { A1 } \\ \mathbf{d}(\mathrm{d} / \mathrm{c}) \\ \hline \end{gathered}$ | $\begin{gathered} \text { A2 } \\ \text { e (e/c) } \end{gathered}$ | f (f/c) | $\begin{aligned} & \text { Cytology } \\ & \mathrm{g}(\mathrm{~g} / \mathrm{f}) \end{aligned}$ |
| FY 2011 | 218 | 192 (88.1) | 187 ( 97.4) | 12 (6.4) | 41 (21.9) | 134 (71.7) | 89 ( 66.4) |
| FY 2012 | 987 | 872 (88.3) | 826 ( 94.7) | 50 (6.1) | 217 (26.3) | 559 (67.7) | 243 (43.5) |
| FY 2013 | 591 | 426 (72.1) | 329 (77.2) | 21 (6.4) | 130 (39.5) | 178 (54.1) | 37 ( 20.8) |
| Total | 1,796 | 1,490 (83.0) | 1,342 (90.1) | 83 ( 6.2) | 388 (28.9) | 871 (64.9) | 369 ( 42.4) |

Priority was given to those in urgent clinical need.
Those confirmed within the range of A1 and A2 (including those with other thyroid conditions) were advised to take the next examination.

Those who require 6- or 12 -month follow-up provided by health insurance and those beyond the specified level of A2 were categorized as "Follow-up advised".

## 2. Fine Needle Aspiration Biopsy and Cytology (FNAC)

2.1 Aspiration biopsy cytology results as of 31 December 2013
2.1.1 Target municipalities in FY 2011

| Suspicious or malignant | $15(11$ surgical cases: 1 of benign nodules; 9 of papillary adenocarcinoma; <br> 1 suspicious for poorly differentiated carcinoma) |
| :--- | :--- |
| Male to female ratio | $5: 10$ |
| Mean age (SD, min-max) | $17.3(2.0,13-20)$ <br> $15.7(1.9,11-18)$ at the time of the disaster |
| Mean tumor size | $14.1 \mathrm{~mm}(6.6 \mathrm{~mm}, 6.0-33.0 \mathrm{~mm})$ |

2.1.2 Target municipalities in FY 2012

| Suspicious or malignant | $50(22$ surgical cases: 22 of papillary adenocarcinoma) |
| :--- | :--- |
| Male to female ratio | $20: 30$ |
| Mean age (SD, min-max) | $17.0(2.8,8-21)$ |
|  | $14.8(2.6,6-18)$ at the time of the disaster |
| Mean tumor size | $14.6 \mathrm{~mm}(8.2 \mathrm{~mm}, 5.2-40.5 \mathrm{~mm})$ |

2.1.3 Target municipalities in FY 2013

| Suspicious or malignant | $10(1$ surgical case: 1 of papillary adenocarcinoma $)$ |
| :--- | :--- |
| Male to female ratio | $3: 7$ |
| Mean age (SD, min-max) | $15.5(2.5,11-19)$ |
|  | $12.9(2.5,8-16$ at the time of the disaster $)$ |
| Mean tumor size | $13.5 \mathrm{~mm}(6.7 \mathrm{~mm}, 7.3-30.3 \mathrm{~mm})$ |

Total for cases FY 2011 - FY 2013

| Suspicious or malignant | $75(34$ surgical cases: 1 of benign nodules; 32 of papillary adenocarcinoma; <br> 1 suspicious for poorly differentiated carcinoma ) |
| :--- | :--- |
| Male to female ratio | $28: 47$ |
| Mean age(SD, min-max) | $16.9(2.6,8-21)$ |
| Mean tumor size | $14.7(2.6,6-18)$ at the time of the disaster $(7.6 \mathrm{~mm}, 5.2-40.5 \mathrm{~mm})$ |

2.2 Suspicious or malignant cases on FNAC by age and sex (including one confirmed case of benign nodules as of 31 December 2013)
2.2.1 Suspicious or malignant cases by age as of 11 March 2011

2.2.2 Suspicious or malignant cases by age as of the date of confirmatory examination

### 2.3 Suspicious or malignant cases on FNAC by estimated radiation dose

Thirty-one of the 75 cases ( $41.3 \%$ ) participated in the Basic Survey (radiation dose estimates) and 24 of them have received the results. Among those, $15(62.5 \%$ ) had estimated radiation exposure dose below 1 mSv .

Number of suspicious or malignant cases by age and dose

| Effective <br> dose <br> $(\mathrm{mSv})$ | Sex |  |  |  |  |  |  |
| :---: | :---: | ---: | ---: | ---: | ---: | ---: | :---: |
|  |  | $0-5$ | $6-10$ | $11-15$ | $16-18$ | Total |  |
| $<0.5$ |  | 0 | 0 | 0 | 1 | 1 |  |
|  |  | 0 | 1 | 1 | 3 | 5 |  |
| $<1.0$ |  | 0 | 0 | 3 | 1 | 4 |  |
|  |  | 0 | 1 | 0 | 4 | 5 |  |
| $<1.5$ | Male | 0 | 0 | 2 | 1 | 3 |  |
|  | Female | 0 | 0 | 3 | 1 | 4 |  |
| $<2.0$ | Male | 0 | 0 | 1 | 0 | 1 |  |
|  | Female | 0 | 0 | 1 | 0 | 1 |  |
| Total | Male | 0 | 0 | 6 | 3 | 9 |  |
|  | Female | 0 | 2 | 5 | 8 | 15 |  |

2.4 Blood and urinary iodine test results as of 31 December 2013
2.4.1 Blood test results Mean $\pm$ SD (Abnormality ratio)

|  | FT4 1) <br> $(\mathrm{ng} / \mathrm{dL})$ | FT3 2) <br> $(\mathrm{pg} / \mathrm{mL})$ | $\mathrm{TSH} 3)$ <br> $(\mu \mathrm{IU} / \mathrm{mL})$ | $\mathrm{Tg} 4)$ <br> $(\mathrm{ng} / \mathrm{mL})$ | $\mathrm{TgAb} 5)$ <br> $(\mathrm{IU} / \mathrm{mL})$ | $\mathrm{TPOAb} 6)$ <br> $(\mathrm{IU} / \mathrm{mL})$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Reference Range | $0.8-1.9$ | $7)$ | $0.4-4.0$ | $\leq 32.7$ | $<28.0$ | $<16.0$ |
| 75 suspicious or malignant cases | $1.2 \pm 0.2(0.0 \%)$ | $3.4 \pm 0.5(0.0 \%)$ | $1.3 \pm 0.7(2.7 \%)$ | $42.4 \pm 92.6(34.7 \%)$ | $-(24.0 \%)$ | $-(12.0 \%)$ |
| Other 1,413 cases | $1.3 \pm 0.3(1.4 \%)$ | $3.7 \pm 1.0(1.6 \%)$ | $1.9 \pm 14.2(5.9 \%)$ | $32.0 \pm 178.2(16.9 \%)$ | $-(12.7 \%)$ | $-(9.8 \%)$ |

2.4.2 Urinary iodine ( $\mu \mathrm{g} /$ day $)$

|  | Minimum | 25 th percentile | Median | 75th percentile | Maximum |
| :---: | ---: | ---: | ---: | ---: | ---: |
| 75 suspicious or malignant cases | 42 | 142 | 238 | 366 | 6,020 |
| Other 1,411 cases | 24 | 120 | 195 | 360 | 35,700 |

1) FT4: Free Thyroxine; higher among patients with Graves' disease and lower with Hashimoto's disease.
2) FT3: Free Triiodothyronine; higher among patients with Graves' disease and lower with Hashimoto's disease.
3) TSH: Thyroid Stimulating Hormone; higher among patients with Hashimoto's disease and lower with Graves' disease.
4) Tg : Thyroglobulin; higher when thyroid tissue is destroyed or when thyroid cancer produces thyroglobulin.
5) $\operatorname{TgAb}$ : Anti-Thyroglobulin Antibody; higher among patients with Hashimoto's disease and Graves' disease
6) TPOAb: Anti-Thyroid Peroxidase Antibody; higher among patients with Hashimoto's disease or Graves' disease
7) Reference range differs according to age.
2.5 Confirmatory test results by municipality as of 31 December 2013

Confirmatory test results in FY 2011 (13 municipalities in the nationally designated evacuation zones)

|  | Number of children <br> screened | Number who <br> required <br> confirmatory test | Proportion who <br> required <br> confirmatory test (\%) | Number who <br> underwent <br> confirmatory test | Suspicious or <br> malignant cases 1$)$ | Proportion of <br> suspicious or <br> malignant cases (\%) |

## Appendix 2

Thyroid Ultrasound Examination (TUE) coverage by prefecture

| Prefecture | Number of test venues | Participants | Prefecture | Number of test venues | Participants | Prefecture | Number of test venues | Participants |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Hokkaido | 2 | 208 | Fukui | 1 | 15 | Hiroshima | 1 | 15 |
| Aomori | 1 | 131 | Yamanashi | 1 | 45 | Yamaguchi | 1 | 18 |
| Iwate | 1 | 138 | Nagano | 2 | 87 | Tokushima | 1 | 6 |
| Miyagi | 2 | 884 | Gifu | 1 | 30 | Kagawa | 1 | 25 |
| Akita | 1 | 176 | Shizuoka | 2 | 78 | Ehime | 1 | 14 |
| Yamagata | 2 | 405 | Aichi | 2 | 128 | Kōchi | 1 | 9 |
| Ibaraki | 2 | 218 | Mie | 1 | 21 | Fukuoka | 2 | 59 |
| Tochigi | 5 | 294 | Shiga | 1 | 14 | Saga | 1 | 5 |
| Gunma | 1 | 126 | Kyōto | 2 | 71 | Nagasaki | 2 | 22 |
| Saitama | 1 | 180 | Ōsaka | 5 | 145 | Kumamoto | 1 | 19 |
| Chiba | 3 | 122 | Hyōgo | 2 | 107 | Ōita | 1 | 29 |
| Tōkyō | 9 | 1,134 | Nara | 1 | 16 | Miyazaki | 1 | 28 |
| Kanagawa | 3 | 452 | Wakayama | 1 | 10 | Kagoshima | 1 | 24 |
| Niigata | 1 | 429 | Tottori | 1 | 13 | Okinawa | 1 | 79 |
| Toyama | 1 | 17 | Shimane | 1 | 11 |  |  |  |
| Ishikawa | 1 | 37 | Okayama | 3 | 53 | Total | 79 | 6,147 |

Participants underwent testing at venues outside Fukushima carried out either by Fukushima Medical University staff (twice in Niigata and Yamagata respectively, and once in Kanagawa) or by local specialists.

## Appendix 3

Thyroid Ultrasound Examination (TUE) results by municipality
Confirmatory test results in FY 2011 ( 13 municipalities in the nationally designated zones) As of 31 December 2013

|  | Participants |  | Number by test results |  |  |  | Nodules |  | Cysts |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

[^1]
## 【Results】

Comparing boys’ height in FY 2012 with FY 2011，there was little difference for children aged 0－1 years． However，the average heights increased among boys aged 2－5 years．

Comparing boys’ weight in FY 2012 with FY 2011，among children aged 0－5 years there was a downward trend．

Comparing girls’ height in FY 2012 with FY 2011，there was little difference for children aged 0－1 years． However，the average heights increased among children aged 2－5 years．

Comparing girls’ weight in FY 2012 with FY 2011，among children aged 0－5 years there was a downward trend．

Comparing boys’ height in FY 2012 with FY 2011，children aged 6－14 were taller on average．
Comparing boys＇weight in FY 2012 with FY 2011，most children aged 6－14 years weigh less on average．
Comparing boys＇height and weight in FY 2012 with national averages in FY 2012，local averages are higher．

Comparing girls’ height in FY 2012 with FY 2011，children aged 6－14 were taller on average．
Comparing girls’ weight in FY 2012 with FY 2011，most children aged 6－14 years weigh less on average．
Comparing girls’ height and weight in FY 2012 with the national averages in FY 2012，local averages are similar for height but higher for weight．

## 【Conclusion】

The survey for FY 2012 shows boys and girls aged 0－15 years tend to be taller and weigh less compared to FY 2011 possibly due to more exercise and better diet．Compared with the national median，however，girls＇ height was similar and they weigh a little more．Further lifestyle improvement is advisable．

# Outline of Mental Health and Lifestyle Survey Reported on 7 February 2014 

## 1. Mental Health and Lifestyle Survey for FY 2013

### 1.1 Purpose

The Great East Japan Earthquake on 11 March 2011 and the following accident at the Fukushima Daiichi Nuclear Power Plant brought the residents of Fukushima Prefecture psychological distress or Post-traumatic Stress Disorder (PTSD) caused by anxiety, evacuation, loss of property, and fearful experiences. The survey started in FY 2011 to assess the residents' mental health and lifestyle, and provide them with appropriate care.

As mental health services should involve medium- and long-term support, we will continue to conduct the survey to convey a strong message of ongoing care and support to the participants. Additionally, further support is needed based on understanding the changes in their situation that have occurred as well as the causes of these changes.
For the survey respondents requiring support, we will provide effective and efficient support by offering over-the-phone or other support services, as well as by promptly sharing participants' information with municipal governments and the Fukushima Center for Disaster Mental Health.

### 1.2 Target population

Residents of Evacuation Zones (when the 2011 survey was sent) as of 15 January 2014 (212,618 people)

[Evacuation Zones]<br>Hirono, Naraha, Tomioka, Kawauchi, Okuma, Futaba, Namie, Katsurao, Iitate<br>Minamisoma, Tamura, Kawamata, part of Date (the area with a specific spot recommended for evacuation)

### 1.3 Implementation Plan

Survey forms (to be filled out by self or parent/guardian) are sent to the target population from early February 2014.

## 1.3-1 Classification

| Category | Age Criteria | Method |
| :---: | :--- | :--- |
| Adults | Born before 1 April 1998 | Self-administered |
| Middle <br> school age | Born between 2 April 1998 and 1 April 2001 | Partially <br> self-administered |
| Primary <br> school age | Born between 2 April 2001 and 1 April 2007 | Completed by parents |
| $4-6$ years | Born between 2 April 2007 and 1 April 2010 | Completed by parents |
| $0-3$ years | Born between 2 April 2010 and 1 April 2013 | Completed by parents |

## 1.3-2 Survey Items

- Mental and physical health
- Lifestyle (diet, sleep, smoking, alcohol and exercise)
- Activities
- Living environment and relationships (for adults)

## 1.3-3 Support after the survey

- Doctors and other professionals at FMU will evaluate and analyse the survey responses. The Mental Health Support Team consisting of clinical psychiatrists, public health nurses and other professionals will provide phone or other forms of support to respondents determined to require counselling or support for mental health or lifestyle problems.
- Participants determined to require examination by a doctor will be referred to a registered physician (*see next section) at a medical facility in the prefecture. Those requiring continued support will be connected to the municipal government of the area to which they evacuated and the Fukushima Center for Disaster Mental Health, where their support needs will be investigated and met.
- At the registered doctor's discretion, participants determined to require further professional mental health care will be handled by FMU and cooperating institutions in the normal course of treatment. Specifically, children will be handled at the Children's Mental Health Treatment Center and all others will be handled in the Department of Psychosomatic Medicine at FMU.
- The Mental Health Support Team will offer information and advice about radiation to participants, and those participants determined to require assistance from a particular relevant specialist will be handled by the Radiation Health Consultation Team comprised of professors from the medical university. If an individual inquiring about the health effects of radiation or some other issue needs to have a medical examination, specialist doctors and other professionals will determine the course of action.

2. Participants of the Interview Survey for FY 2013 (as of 31 December 2013)

- 28 out of about 30 respondents of the Mental Health and Lifestyle Survey for FY 2012
- 4 out of 20 patients of psychiatric hospitals or clinics within the prefecture

## 3. Registered Physicians

Registered physicians are psychiatrists or pediatricians who provide services to participants determined to require healthcare services based on the Mental Health and Lifestyle Survey.
To be eligible for registration, a psychiatrist or a pediatrician needs to attend the accredited workshops held by FMU. The number of registrants is 145 from 84 medical institutions as of 31 December 2013.

## Mental Health and Lifestyle Survey for FY 2012

## 1. Purpose

The survey responses were analyzed by doctors and other professionals at FMU. A Mental Health Support Team consisting of clinical psychologists, public health nurses and others performed consultations to those determined to require counseling or support for mental health or lifestyle problems.

## 2. Methods

### 2.1. Target for support

Targets of the FY 2012 survey were residents of nationally designated evacuation zones, who were born before 1 April 2012. Based on the criteria below, 1,474 children were eligible for support and 674 of them were offered telephone counseling, and 800 were sent written support materials. Among the 800 children, 41 were determined to require telephone counseling based on the completed written materials.
The number of adult respondents requiring support was 16,242 . Of these, 6,074 required telephone counseling and 10,168 required written support materials. Based on the completed written materials, 701 respondents were determined to require telephone counseling, whereas 2,657 met only the CAGE criteria for identification of alcoholism.
If the participants could not be reached for telephone support (except for the deceased) due to absence, information was provided by sending booklets: Mental Health Support for Disaster Victims and Their Families, Lifestyle Checklist, and Prevention of Nursing Care. To those who only met the criteria of CAGE test scores, Drinking and Mental Health was distributed.

### 2.2 Criteria for Support

## Telephone Counseling

Respondents who required support were identified on the basis of the survey results. Members of the mental health support team selected the candidates based on the scores or the content of free-answer questions.
Respondents who required support (A):

- Children with SDQ score $\geq 20$, adults with K 6 score $\geq 17$ or PCL score $\geq 61$.

Respondents who required support (B):

- Children and adults identified based on the content of free-answer questions.
- Adults with a previous history of hypertension or diabetes who have not received treatment
with a BMI $\geq 30$ (calculated from weight and height written in the survey) and a weight gain of $\geq 3 \mathrm{~kg}$ after the disaster.
- Adults with a history of mental disorders who are not currently visiting a clinic.

## Written materials

Respondents requiring support were sent written materials including a response card. In accordance with their will or free-answer question content, telephone counseling was provided.

Respondents who required support (A):

- Children with SDQ score $\geq 16$ and adults with K6 score $\geq 13$ or PCL score $\geq 44$, who did not meet the criteria for telephone counseling.

Respondents who required support (B):

- Children: No criteria.
- Adults who neither meet the above criteria nor receive medical treatment with sleep disorder, depression and decreased activity.
- Adults with CAGE score $\geq 2$ out of 4 .

### 2.3. Numbers of respondents requiring support and the support provided

The figure excludes participants who only met the criteria of CAGE test scores.

* As of 31 October 2013
** Participants who declined support in the response card.

Figure 1: Number of participants required support and the support provided

### 2.4. Categories of Results and Continued Support

The results of the telephone counseling were categorized into four groups: Follow-up 1, 2, 3, and 'Declined support'. Those requiring continued support were given telephone counseling or information by FMU, municipal governments and Fukushima Center for Disaster Mental Health. Participants determined to require examination by a doctor were referred to a registered physician.

## Categories of results

Follow-up 1: Participants confirmed to be improving or self-managing their problems.
Follow-up 2: Participants not recovering from health problems, the emotional aftermath, adjustment problems etc.

Follow-up 3: Participants whose status could not be confirmed.
Declined support: Participants clearly conveyed that they did not need support.

## Continued Support

Follow-up: Participants requiring continued telephone counseling.
Municipal government: Participants required to be connected to municipal government.
Referral: Participants sent a referral to registered doctors.
Sent list of registered doctors within Fukushima:
Participants sent information of registered doctors.
Sent information of medical institutions outside prefecture:
Participants sent information of institutions outside prefecture for support.

Handled by other departments:
Participants required to be handled by the departments of Basic
Survey, Thyroid Ultrasound Examination of FMU Radiation
Medical Science Center.

## 3. Results (Children)

Since SDQ is for children aged 4 years and older, children aged 0-3 years old were determined on the basis of the free-answer question and not included in the participants requiring written support materials. Because few participants who had been sent written materials had telephone counseling (12 of age 4-6 years, 19 of primary school age, 8 of middle school age), the following result combines participants requiring telephone counseling with the number determined to require phone support based on the written materials.

### 3.1 Status of Respondents Requiring Support

A total of 715 children required support; 674 of them needed telephone counseling and 41 were determined to require support on the basis of the written support materials. Of these, 406 ( $56.8 \%$ ) were male and 309 ( $43.2 \%$ ) were female. Phone support was successfully provided to 623 ( $87.1 \%$ ) of the total.
Respondents living within Fukushima were $408(65.5 \%)$ and 215(34.5\%) were living outside Fukushima. (Table 1)

Table 1 Status of children requiring support (By sex and area)

| Participants requiring support | $\begin{gathered} \text { Total } \\ 715 \end{gathered}$ |  | $\begin{gathered} \hline 0-3 \text { years } \\ 21 \end{gathered}$ |  | $\begin{gathered} \hline \text { 4-6 years } \\ 161 \end{gathered}$ |  | Primary school age$367$ |  | Middle school age 166 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Male | 406 | (56.8) |  | (38.1) |  | (55.3) | 227 | (61.9) | 82 | (49.4) |
| Female | 309 | (43.2) |  | (61.9) |  | (44.7) | 140 | (38.1) | 84 | (50.6) |
| Support Given | 623 |  | 19 |  | 138 |  | 317 |  | 149 |  |
| Within Fukushima | 408 | (65.5) | 13 | (68.4) |  | (68.1) | 194 | (61.2) | 107 | (71.8) |
| Outside Fukushima | 215 | (34.5) | 6 | (31.6) |  | (31.9) | 123 | (38.8) | 42 | (28.2) |

Values in the table are expressed as $n(\%)$.
Because there were few children required written support materials, the breakdown is not shown.
The number of support given includes participants who were provided telephone counseling.

### 3.2 Participants' state of health

We asked participants over the phone about their physical condition, sleep, and the medical institutions they are treated.

Table 2 Participants' state of health

| Number of support given | $\begin{gathered} \hline \text { Total } \\ 623 \end{gathered}$ |  |  | $\begin{gathered} \hline 4-6 \text { years } \\ 138 \end{gathered}$ | Primary school age 317 | Middle school age $149$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Physical condition |  |  |  |  |  |  |

| Unclear | 104 | 14 | - | 31 | 46 | 13 |

Values in the table are expressed as n (\%).
The participants who did not mention the issue go to 'Unclear' category.
Proportions do not include the number of 'Unclear'.

Comparing participants' physical condition with 1 year ago, 119 (21.8\%) saw improvement, $216(39.6 \%)$ saw no changes, $24(4.4 \%)$ became worse, 187 ( $34.2 \%$ ) have not had problems so far.

Asked about their sleep, 60 (11.7\%) saw improvement, 186 (36.2\%) saw no changes, 10
(1.9\%) became worse, 258 ( $50.2 \%$ ) have not have problems so far.

As for medical institutions, $50(10.1 \%)$ were treated by psychiatrists or psychosomatic medicine specialists, 105 (21.3\%) were treated by other specialists, and 339 ( $68.6 \%$ ) did not see a doctor.

### 3.3 Telephone counseling

The results of the support were categorized into 'Follow-up 1', 'Follow-up 2', 'Follow-up 3', and 'Declined Support' as was the case in FY 2011. The breakdown below shows the criteria of 'Follow-up 2'. The proportion is the ratio to 'Follow-up 2'.

Table 3: Results of Support given (Children)

| Number of support given | Total 623 | $\begin{gathered} \hline 0-3 \text { years } \\ 19 \end{gathered}$ |  | $\begin{gathered} 4-6 \text { years } \\ 138 \end{gathered}$ |  | Primary school age Middle school age $317$ <br> 149 |  |  |  |

| Sent list of registered doctors | 6 (1.0) | 0 | (0.0) | 1 | (0.7) | 3 | (0.9) | 2 | (1.3) |
| Sent list of medical institutions outside Fukushima | 3 (0.5) | 0 | (0.0) | 0 | (0.0) | 0 | (0.0) | 3 | (2.0) |
| Handled by other departments | 5 (0.8) | 1 | (5.3) | 0 | (0.0) |  | (0.6) | 2 | (1.3) |

Values in the table are expressed as $n(\%)$.

Table 4: Breakdown of 'Follow-up 2'

Values in the table are expressed as n (\%).

After the telephone counseling, 528 ( $84.7 \%$ ) were designated as 'Follow-up 1', 82 ( $13.2 \%$ ) as 'Follow-up 2', $7(1.1 \%)$ as 'Follow-up 3', and $6(1.0 \%)$ as 'Declined Support'. For continued support, 27 were designated as 'Follow-up', 6 were sent list of registered doctors within Fukushima, 3 were sent list of medical institutions outside Fukushima, and 5 were handled by other departments. (Table 3)

The reasons for 'Follow-up 2' were categorized into the following: 16 for physical health problems, 47 for mental health problems, 11 for emotional sequelae, 27 for adjustment problems, and 10 for isolation. (Table 4)

### 3.4 Problems faced by participants

Since the Mental Health and Lifestyle Survey in FY 2011, we have used analytic induction to investigate problems faced by participants. They fall into four broad categories: child's reaction, parent/guardian and family problems, school and neighborhood relationships, and environment. Child's reaction and parent/guardian and family problems divide into subcategories. Figure 2 is the revised conceptual diagram of those problems.

The content of the respondents' problems mentioned for the FY 2012 survey were categorized based on the categories from the survey for FY2011. Frequently mentioned problems were reaction to earthquake and radiation, impact on school, parent/guardian's problems, and family relationship.

Figure 2: Conceptual diagram of problems faced by participants (children)

## 4. Result (Adults)

### 4.1 Status of Respondents Requiring Support

## Telephone Counseling

A total of 6,074 required telephone counseling. Among the 4,130 participants identified on the basis of the scores, $1,595(38.6 \%)$ were male and $2,535(61.4 \%)$ were female. 1,944 participants were determined on the basis of free-answer question. Of these, $688(35.4 \%)$ were male and 1,256 (64.6\%) were female. (Table 5)

The support was provided to 5,324 ( $87.7 \%$ ). Among the participants, 4,277 ( $80.3 \%$ ) lived within Fukushima and 1,047 (19.7\%) lived outside Fukushima. (Table 6)

Table 5: Participants requiring telephone counseling (By sex and age group)

| Age group | Based on the scores |  |  |  |  | Based on the free-answer question |  |  |  |  |

| Outside Fukushima | 1,047 | (19.7) | 717 | (19.8) | 330 | (19.5) |

Values in the table are expressed as n (\%).
The number includes participants who were provided telephone counseling.

## Written Materials

Among the participants requiring written support materials, a total of 701 required telephone counselling. Out of the 535 participants identified on the basis of the scores, 242 ( $45.2 \%$ ) were male and 293 ( $54.8 \%$ ) were female. 166 participants were determined on the basis of the free-answer question. Of these, $92(55.4 \%)$ were male and 74 ( $44.6 \%$ ) were female. (Table 7)
The telephone counseling was provided to $667(95.1 \%)$. Of these, $533(79.9 \%)$ lived within Fukushima and 134 (20.1\%) lived outside Fukushima. (Table 8)

Table 7: Participants requiring written materials (By sex and age group)

| Handled by other departments | 19 | (0.4) | 10 | (0.3) | 9 | (0.5) |

Values in the table are expressed as n (\%).

Table 12: Breakdown of the reasons for 'Follow-up 2'

| Number |  |  | Based on the scores$660$ |  | Based on the free-answer question$206$ |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  |
| Physical problems | 723 | (83.5) | 579 | (87.7) | 144 | (69.9) |
| Mental problems | 690 | (79.7) | 531 | (80.5) | 159 | (77.2) |
| Emotional aftermath | 113 | (13.0) | 98 | (14.8) | 15 | (7.3) |
| Adjustment disorder | 66 | (7.6) | 60 | (9.1) | 6 | (2.9) |
| Isolation | 128 | (14.8) | 103 | (15.6) | 25 | (12.1) |

Values in the table are expressed as n (\%).

After the telephone counseling, 4,277 (80.3\%) were designated as 'Follow-up 1', 866 (16.3\%) as 'Follow-up 2', $138(2.6 \%)$ as 'Follow-up 3', and 43 ( $0.8 \%$ ) as 'Declined Support'. (Table 11) For continued support, 200 were designated as 'Follow-up', 67 were connected to the municipal government, 1 was sent a referral, 45 were sent list of registered doctors within Fukushima, 12 were sent list of medical institutions outside Fukushima, and 19 were handled by other departments. (Table 11)
The reasons for 'Follow-up 2' were categorized into the following: 723 for physical health problems, 690 for mental health problems, 113 for emotional aftermath, 66 for adjustment problems, 128 for isolation. (Table 12)

## Respondents requiring written support materials

In accordance with the respondents' will or the content of the free-answer question, telephone counseling was provided.

Table 13: Results of Telephone Counseling

| Number of support given | $\begin{aligned} & \text { Total } \\ & 667 \end{aligned}$ |  | Based on the scores$507$ |  | Based on the free-answer question$160$ |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| Handled by other departments | 3 | (0.4) | 3 | (0.6) | 0 | (0.0) |

Values in the table are expressed as $\mathrm{n}(\%)$.

Table 14: Breakdown of 'Follow-up 2'

| Number |  |  | Based on the scores$77$ |  | Based on the free-answer question$12$ |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  |
| Physical problems | 85 | (95.5) | 74 | (96.1) | 11 | (91.7) |
| Mental problems | 57 | (64.0) | 51 | (66.2) | 6 | (50.0) |
| Emotional aftermath | 16 | (18.0) | 16 | (20.8) | 0 | (0.0) |
| Adjustment problems | 3 | (3.4) | 3 | (3.9) | 0 | (0.0) |
| Isolation | 17 | (19.1) | 15 | (19.5) | 2 | (16.7) |

Values in the table are expressed as $n(\%)$.

After the telephone counseling, $559(83.9 \%)$ participants were designated as 'Follow-up1', $89(13.3 \%)$ as 'Follow-up 2', 18(2.7\%) as 'Follow-up 3', and $1(0.1 \%)$ as 'Declined Support'. (Table 13)
As continued support, 20 participants were designated as 'Follow-up', 9 were connected to municipal government, 2 were sent list of registered doctors, and 3 were handled by other departments. (Table 13)

The reasons for 'Follow-up 2' were categorized into the following: 85 for physical health problems, 57 for mental health problems, 16 for emotional aftermath, 3 for adjustment problems, and 17 for isolation. (Table 14)

### 4.4 Problems faced by participants

Since the Mental Health and Lifestyle Survey in FY 2011, we have used analytic induction to investigate problems faced by participants. They fall into four broad categories: personal problems, household problems, problems with social life, and environment and culture. Personal problems, household problems, and problems with social life divide into subcategories. Figure 3 is the revised conceptual diagram of those problems.

The content of the respondents' problems mentioned for the FY 2012 survey were categorized based on the categories from the survey for FY2011. Frequently mentioned issues were physical problems, disrupted sleep, changes in daily life and habits, dissatisfaction with government policies or problems with disaster claims.

Figure 3 Conceptual diagram of problems faced by participants (adults)

## 5. Conclusion

The number of those requiring support was 1,474 children and 16,242 adults for the Mental Health and Lifestyle Survey for FY2012. Based only on the CAGE test scores, the number was 2,657. Among the children, 674 required telephone counseling and 800 required written support materials. The number of participants determined to require telephone support based on the content of written materials was 41 . The number of adults required telephone counseling was 6,074 and 10,168 required written materials. The number of those determined to require telephone support based on the content of written materials was 701. If those identified as requiring support were eliminated (except for the deceased) or could not be reached for telephone support, information was provided by sending booklets: Mental Health Support for Disaster Victims and Their Families, Lifestyle Checklist, and Prevention of Nursing Care. To those only met the criteria of CAGE test scores, Drinking and Mental Health was distributed.
After the telephone counseling for children, 528 (84.7\%) were categorized as 'Follow-up 1*', and $82(13.2 \%)$ were categorized as 'Follow-up $2^{* *}$ '. Frequently discussed issues were reaction to earthquake and radiation, impact on school, parent or guardian's problem and family relationships.
Among the adults, 4,277 ( $80.3 \%$ ) were categorized as 'Follow-up 1 ' and 866 ( $16.3 \%$ ) were categorized as 'Follow-up 2'. Among the respondents of written materials, 559 ( $83.9 \%$ ) were categorized as 'Follow-up 1' and 89 ( $13.3 \%$ ) were categorized as 'Follow-up 2 '. Frequently discussed issues were physical problems, disrupted sleep, changes in daily life and habits, dissatisfaction with government policies or problems of disaster claims.
It is necessary for us to cooperate with municipal governments and Fukushima Center for Disaster Mental Health to provide continued support.

* Participants confirmed to be improving or self-managing their problems.
** Participants not recovering from health problems, the emotional aftermath, adjustment disorder etc.

# Pregnancy and Birth Survey for FY 2012 <br> Reported on 7 February 2014 

## 1. Outline

## Purpose

Fukushima Medical University established a Pregnancy and Birth Survey in FY 2011 to promote health management of women and mothers in Fukushima under the initiative of Fukushima Prefecture.

The survey revealed that pregnant women and mothers with infants strived to raise their children in Fukushima Prefecture since the Great East Japan Earthquake and the subsequent nuclear disaster, despite the evacuation, changes in daily life, and concerns toward health effects of radiation.

We continued to conduct the survey in FY 2012 to address their anxiety and provide necessary support through assessing their physical and mental health. The survey also aims to improve perinatal care in Fukushima Prefecture by listening to their needs and expectations.

## Target Population

Those who received Maternal and Child Health Handbooks from municipal offices in Fukushima Prefecture between 1 August 2011 and 31 July 2012, and those who had handbooks issued in other prefectures but received antenatal care or delivered babies in Fukushima Prefecture after the disaster.

Number of participants: 14,516 (FY 2011: 16,001)

## Methods

Survey questionnaire was sent to members of the target population on 12 December 2012.
Newly added questions from FY 2012 address the issues below:

- Self-rated health
- Perinatal care
- Evacuation
- Family structure
- Confidence in child rearing
- Family planning

## Data Collection Period

From 14 December 2012 through 30 November 2013.

## 2. Survey Results

The number of valid responses may not equal to the survey total because of missing answers.

## Response Rates

The total number of responses for FY 2012 Survey was 7,181 (49.5\%).
Valid responses: 7,139
Invalid responses: 42 (No response: 9; Duplication: 1; Exclusions: 32)
The response rate of the survey for FY2012 was lower than that for FY 2011: 9,316 (58.2\%)

## Respondents

- The number of responses for FY 2012 by area was as follows: Kempoku, 1,857 (55.5\%); Kenchu, 2,067 (48.7\%); Kennan, 560 (48.1\%); Soso, 500 (43.7\%); Iwaki, 1,203 (47.8\%); Aizu, 819 (44.3\%); Minami-aizu, 79 (50.3\%); outside Fukushima, 96.
- Compared with FY 2011, the overall response rate declined in all areas. In particular, the survey found a significant decrease in the response rate from $65.5 \%$ to $43.7 \%$ in the Soso area. However, for those living outside Fukushima, the number of respondents increased from 23 in FY 2011to 96 in FY 2012.
- Roughly two-thirds of respondents were in the 25-34 age group, followed by 35-39 and 20-24 age groups.

## Pregnancy Outcome

- There was little difference in the proportion of miscarriage $(0.81 \%)$ and abortion $(0.08 \%)$ after receiving the Maternal and Child Health Handbooks compared with those in FY 2011: miscarriage, $0.77 \%$; abortion, $0.06 \%$. (Q9)
- The proportion of preterm deliveries was $5.74 \%$, which was higher than FY 2011 ( $4.75 \%$ ) but roughly the same as the recent data in Japan 2011; 5.7\% (Q17)
- The proportion of low birth weight infants was $9.6 \%$, which was higher than FY 2011 ( $8.9 \%$ ), but roughly the same as the recent data in Japan 2011; 9.6\% (Q18)
- The incidence of congenital anomalies in singleton pregnancies was $2.39 \%$, which was roughly the same as FY $2011\left(2.85 \%^{*}\right)$ and a generally reported incidence of $3-5 \%$. The most frequent anomaly was cardiovascular malformation with an incidence of $0.79 \%(0.89 \% *$ in FY 2011), which also was similar to a generally reported incidence of $1 \%$. (Q18)
Note: The denominator was the total number of valid responses.

## Mental Health of Mothers

- The proportion of mothers with depressive symptom(s) was $25.5 \%$, which was $27.1 \%$ in FY 2011. (Q4-1, Q4-2) The area with the highest rate was Soso ( $32.1 \%$ ) as in FY 2011, and the lowest was Minami-aizu $(17.9 \%)$. According to the national maternal and child health plan in Japan, the proportion of mothers with postpartum depression, assessed by the Edinburgh Postnatal Depression Scale, was $10.3 \%$ in 2009. Note: The indicator used in the survey is different from the national survey.

## Perinatal Care

- Mothers were asked if they received sufficient antenatal and delivery care, and $3.5 \%$ answered NO or NOT AT ALL. (Q3)
- The proportion of those who could not receive antenatal care or deliver at initially planned medical institutions was $14.1 \%$, which was below $24.6 \%$ FY 2011. The Soso area, which had the highest rate in FY $2011(72.8 \%)$, was with a lower proportion of $18.9 \%$ in FY 2012. (Q11)
- The proportion of those who could not receive antenatal care as scheduled was $2.2 \%$, which was below that of $18.8 \%$ in FY 2011. (Q12)

## Family and Child Rearing

- The Soso area had the highest proportion of those who had evacuated (61.3\%). (Q5)
- The proportion of those who were not confident in child rearing was $15.4 \%$. (Q19) According to the 2010 national survey to assess toddlers' health status, the proportion of mothers with one-year-old children, who were not confident in child rearing, was $23.0 \%$.
- When asked how they fed their babies before weaning, $35.2 \%$ answered breastfeeding only, $54.6 \%$ breast and bottle feeding combined, $9.7 \%$ bottle feeding only. The proportion of breastfeeding increased from $30.4 \%$ in FY 2011. (Q20) When asked about the reasons for choosing bottle feeding, $77.5 \%$ answered not enough breast milk, and $6.2 \%$ were worried about the effects of radiation (19.8\%** in FY 2011). (Q20-1) According to the survey by the Ministry of Health, Labour and Welfare, the national average of mothers who were breastfeeding when their baby was four months old was35-40\%-the proportion increased to $55.8 \%$ in FY 2010. Compared to the national data, the proportion in Fukushima Prefecture had been low; the survey in 2007 by the Breastfeeding Association in Fukushima found that $32.2 \%$ mothers were breastfeeding their four months old baby.

## Family Planning

- $52.9 \%$ of respondents were planning a pregnancy. According to the 14th National Fertility Survey in 2010, $58 \%$ of couples married for less than 10 years were planning a pregnancy. The proportion was $51 \%$ among those who already had a child.
- Following services were requested among those who were planning a pregnancy: child rearing and pediatric information and services, $71.0 \%$; improvement of child care including care for longer hours and sick children, $66.2 \%$.
- The reasons for not planning a pregnancy were as follows: no desire, $52.6 \%$; busy raising children, $35.9 \%$; age or health related reasons, $31.5 \%$; financial reasons, $25.8 \%$.

## Conclusion

- The response rate was $49.5 \%$, which was below $58.2 \%$ in FY 2011.
- The proportions of miscarriage or abortion after receiving the Maternal and Child Health Handbooks stayed roughly the same as in FY2011.
- The proportions of preterm delivery and low birth weight infants were $5.74 \%$ and $9.6 \%$ respectively, which were slightly above the numbers in the previous year, but roughly the same as the national average. The incidence of congenital anomalies in singleton pregnancies was $2.39 \%$, which was roughly the same as the generally reported incidence as in FY 2011.
- The proportion of mothers with depression symptom(s) was $25.5 \%$, which was below FY 2011, but still high.
- $52.9 \%$ were planning a pregnancy. The proportion was roughly the same as the data from the National Fertility Survey in 2010.
* The figure differs from the survey for FY 2011 since the denominator included the number of invalid response.
**The figure differs from the survey for FY 2011 since the denominator included the sum of multiple answers.

## 3. Support after the Survey <br> <br> Purpose

 <br> <br> Purpose}Counseling was provided via telephone or email by midwives and public health nurses for respondents who were screened to be in need of support in order to address their anxiety.

## Target for Support

Respondents of the Pregnancy and Birth Survey for FY 2012

## Criteria for Support

- Respondents who had two depression symptoms
- Respondents who were screened based on their opinions written in a given free space

We used wider criteria than the previous year:
Those who appeared to have a severe depressed mood
Those in need of support of child rearing
Those who are sensitive about radiation exposure
Those who want detailed information
Those who requested support

## Methods

Support via telephone and email

## 4. Results of the Support

Note: Participants who responded after 30 November 2013 and received support were excluded.

## Number of Supports Given

- The number of those who required support was 1,104 out of 7,181 , who responded from 14 December 2012 through 30 November 2013. The proportion was $15.4 \%$, which was roughly the same as that of FY 2011: 1,401 (15.0\%)
The number of those who received support via email was 6. (13 in FY 2011)
- $68.0 \%$ were screened based on their depression symptoms ( $87.4 \%$ in FY 2011), and $32.0 \%$ based on their opinions written in a free space ( $12.6 \%$ in FY 2011).

## Content

- Frequently discussed issues were physical and mental health of mothers and children (33.4\%), followed by child rearing ( $26.7 \%$ ) and concerns about radiation ( $23.7 \%$ ), which was the most frequent category in FY 2011 (29.2\%.

## Reasons for Completing Support

- We completed telephone support after carefully listening to mothers' concerns in 684 (62.0\%) cases, providing information about other counseling services in $468(42.4 \%)$ cases, answering to their specific questions in 186 ( $16.8 \%$ ) cases, and confirming that they were already receiving care in 172 ( $15.6 \%$ ) cases. In other cases, we recommended further treatment 83 ( $7.5 \%$ ), referred to clinical psychologists 14 ( $1.3 \%$ ), confirmed to already have support from municipal governments $5(0.5 \%)$, referred to radiation consultation $1(0.1 \%)$, did not answer our calls 186 ( $16.8 \%$ ), no phone number provided 13 ( $1.2 \%$ ), and declined support $11(1.0 \%)$. (The denominator is the total number of supports provided.)

## Conclusion

- The proportion of mothers whom we provided support was roughly the same as in FY 2011. The proportion of those screened positive on the basis of mothers' opinions written in a free space was higher in FY 2012.
- The most frequent discussed issue in the counseling was physical and mental health of mothers and children. Issues related to radiation became less frequent.

## Results of Pregnancy and Birth Survey for FY2012

## 1. Response rates

Response received from 14 December 2012 through 30 November 2013

| Area | Participants |  | Respondents (\%) |  |
| :--- | ---: | ---: | ---: | ---: |
| Kempoku | 3,347 | $23.1 \%$ | 1,857 | $55.5 \%$ |
| Kenchu | 4,243 | $29.2 \%$ | 2,067 | $48.7 \%$ |
| Kennan | 1,164 | $8.0 \%$ | 560 | $48.1 \%$ |
| Soso | 1,145 | $7.9 \%$ | 500 | $43.7 \%$ |
| Iwaki | 2,516 | $17.3 \%$ | 1,203 | $47.8 \%$ |
| Aizu | 1,848 | $12.7 \%$ | 819 | $44.3 \%$ |
| Minami-aizu | 157 | $1.1 \%$ | 79 | $50.3 \%$ |
| Outside <br> Fukushima | 96 | $0.7 \%$ | 96 | $100.0 \%$ |
| Total | 14,516 | $100.0 \%$ | 7,181 | $49.5 \%$ |

## 2. Results

The total number is 7,139 of 7,181 participants excluding 42 invalid responses ( 9 nonrespondents, 1 overlapping respondent, and 32 exclusions).

Age Group of Participants

| Area | Ages 15-19 |  | Ages 20-24 |  | Ages 25-29 |  | Ages 30-34 |  | Ages 35-39 |  | Ages 40-44 |  | Ages 45-49 |  | No response |  | Total |  |

Proportion does not total to $100 \%$ because of multiple answers.

## 3. Free-answer Questions

The participants are 1,481 of 7,139 valid responses who answered the free-answer question.

| Effects of radiation on fetus and child | 391 | 26.4\% |
| :---: | :---: | :---: |
| Other | 222 | 15.0\% |
| Request for information on radiation and research results | 191 | 12.9\% |
| Complaints about the survey | 156 | 10.5\% |
| Effects of radiation on food or baby food | 140 | 9.5\% |
| Anxiety over the effects of radiation on water | 112 | 7.6\% |
| Anxiety about radiation exposure of children when outside | 112 | 7.6\% |
| Physical problems** | 78 | 5.3\% |
| Anxiety and dissatisfaction about evacuation and family living apart | 64 | 4.3\% |
| Anxiety and dissatisfaction about reliability or lack of information | 60 | 4.1\% |
| Request for medical check-up and examinations | 58 | 3.9\% |
| Request for Fukushima Health Management Survey | 56 | 3.8\% |
| Request for the overall examination | 54 | 3.6\% |
| Effects of radiation on breast milk or infant formula | 53 | 3.6\% |
| Consultation of child rearing** | 52 | 3.5\% |
| Request for decontamination and provision of safe playgrounds | 48 | 3.2\% |
| Request for Thyroid Ultrasound Examination | 47 | 3.2\% |
| Request to measure internal radiation exposure (by whole body counter, etc.) | 46 | 3.1\% |
| Request for adequate child support services | 44 | 3.0\% |
| Anxiety and dissatisfaction about inadequate medical services | 43 | 2.9\% |
| Regarding adequate medical service and physical care | 37 | 2.5\% |
| Issues related to the current pregnancy outcome | 36 | 2.4\% |
| Positive comments about this survey | 33 | 2.2\% |
| Mental illness | 28 | 1.9\% |
| Anxiety about the effects of radiation on the next pregnancy. | 24 | 1.6\% |
| Regarding financial anxiety and burden | 23 | 1.6\% |
| Request for financial support | 23 | 1.6\% |
| Request for adequate mental health care services | 18 | 1.2\% |
| Request for test on breast milk | 18 | 1.2\% |
| Regarding external radiation exposure (provision of glass badges and dosimeters) | 7 | 0.5\% |
| Request for evacuation support | 4 | 0.3\% |
| Request for support for supplies and gasoline | 3 | 0.2\% |
| Request for urine test | 3 | 0.2\% |

The denominator is the sum of 1,481 of respondents.

## 4.Support

The number of those required support in FY 2012 is 1,104 of 7,181 responses $(15.4 \%)$.
The results of responses received from 14 December 2012 through 30 November 2013
Number of respondents required support

| Area | Target population | Response |  | Support given |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Kempoku | 3,347 | 1,857 | 55.5\% | 278 | 15.0\% |
| Kenchu | 4,243 | 2,067 | 48.7\% | 339 | 16.4\% |
| Kennan | 1,164 | 560 | 48.1\% | 72 | 12.9\% |
| Soso | 1,145 | 500 | 43.7\% | 94 | 18.8\% |
| Iwaki | 2,516 | 1,203 | 47.8\% | 170 | 14.1\% |
| Aizu | 1,848 | 819 | 44.3\% | 133 | 16.2\% |
| Minami-aizu | 157 | 79 | 50.3\% | 9 | 11.4\% |
| Outside <br> Fukushima | 96 | 96 | 100.0\% | 9 | 9.4\% |
| Total | 14,516 | 7,181 | 49.5\% | 1,104 | 15.4\% |

The denominator of response is the target population.
The denominator of support given is the number of response.

Respondents requiring support by area

| Area | Support required based on the categories of depression |  | Support required based on the free-answer questions |  | Total |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Kempoku | 188 | 67.6\% | 90 | 32.4\% | 278 | 100.0\% |
| Kenchu | 227 | 67.0\% | 112 | 33.0\% | 339 | 100.0\% |
| Kennan | 47 | 65.3\% | 25 | 34.7\% | 72 | 100.0\% |
| Soso | 71 | 75.5\% | 23 | 24.5\% | 94 | 100.0\% |
| Iwaki | 112 | 65.9\% | 58 | 34.1\% | 170 | 100.0\% |
| Aizu | 95 | 71.4\% | 38 | 28.6\% | 133 | 100.0\% |
| Minami-aizu | 6 | 66.7\% | 3 | 33.3\% | 9 | 100.0\% |
| Outside Fukushima | 5 | 55.6\% | 4 | 44.4\% | 9 | 100.0\% |
| Total | 751 | 68.0\% | 353 | 32.0\% | 1,104 | 100.0\% |

Content of counseling by area

| Area | Health of mothers |  | Childrearing |  | Effects of radiation |  | Health of children |  | Family life |  | Evacuation |  | Other |  | Valid response |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Kempoku | 92 | 33.1\% | 92 | 33.1\% | 70 | 25.2\% | 32 | 11.5\% | 27. | 9.7\% | 5 | 1.8\% | 74 | 26.6\% | 278 |
| Kenchu | 105 | 31.0\% | 79 | 23.3\% | 83 | 24.5\% | 44 | 13.0\% | 43 | 12.7\% | 9 | 2.7\% | 101 | 29.8\% | 339 |
| Kennan | 27 | 37.5\% | 20 | 27.8\% | 19 | 26.4\% | 11 | 15.3\% | 10 | 13.9\% | 1 | 1.4\% | 22 | 30.6\% | 72 |
| Soso | 28 | 29.8\% | 21 | 22.3\% | 15 | 16.0\% | 14 | 14.9\% | 6 | 6.4\% | 6 | 6.4\% | 34 | 36.2\% | 94 |
| Iwaki | 65 | 38.2\% | 47 | 27.6\% | 47 | 27.6\% | 29 | 17.1\% | 14 | 8.2\% | 0 | 0.0\% | 48 | 28.2\% | 170 |
| Aizu | 47 | 35.3\% | 30 | 22.6\% | 24 | 18.0\% | 16 | 12.0\% | 9 | 6.8\% | 0 | 0.0\% | 48 | 36.1\% | 133 |
| Minami-aiz <br> u | 4 | 44.4\% | 4 | 44.4\% | 1 | 11.1\% | 2 | 22.2\% | 4 | 44.4\% | 0 | 0.0\% | 2 | 22.2\% | 9 |
| Outside <br> Fukushima | 1 | 11.1\% | 2 | 22.2\% | 3 | 33.3\% | 0 | 0.0\% | 1 | 11.1\% | 0 | 0.0\% | 5 | 55.6\% | 9 |
| Total | 369 | 33.4\% | 295 | 26.7\% | 262 | 23.7\% | 148 | 13.4\% | 114 | 10.3\% | 21 | 1.9\% | 334 | 30.3\% | 1,104 |

The denominator is the sum of valid response.
Proportion does not total to $100 \%$ because of multiple answers.

Reason for completing support

|  | A |  | B |  | C |  | D |  | E |  | F |  | G |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Kempo ku | 180 | 64.7\% | 112 | 40.3\% | 50 | 18.0\% | 37 | 13.3\% | 20 | 7.2\% | 4 | 1.4\% | 2 | 0.7\% |
| Kenchu | 215 | 63.4\% | 146 | 43.1\% | 51 | 15.0\% | 49 | 14.5\% | 24 | 7.1\% | 1 | 0.3\% | 1 | 0.3\% |
| Kennan | 47 | 65.3\% | 37 | 51.4\% | 15 | 20.8\% | 13 | 18.1\% | 6 | 8.3\% | 1 | 1.4\% | 1 | 1.4\% |

| Total | 1 | 0.1\% | 0 | 0.0\% | 186 | 16.8\% | 13 | 1.2\% | 11 | 1.0\% | 1,104 |

The denominator is the sum of valid response.
Proportion does not total to $100 \%$ because of multiple answers.
A: We listened and dealt with the issues of respondents.
B: Respondents were given information about counseling services
C: We answered to respondents' questions.
D: Respondents who were confirmed to have visited clinics for consultation.
E: Respondents who were referred to clinical psychologists.
F: Respondents who were recommended to receive medical treatment.
G: Respondents who were connected to municipal governments.
H: Respondents who were connected to a consultation office.
I: Specialists answered to the respondents' questions.

## 1. Outline of database systems

We will develop a database system to consolidate information of data collected from the Basic Survey, Detailed Surveys, whole body counter, personal dosimeter, cancer registry and mortality data.
Using the database enables us to make and provide documents and data essential for long-term health of residents of Fukushima.

## 2. Database System Development

Database system development started in April 2013 with final testing and the storage of data underway. System operation is planned to commence in March 2014.

3. Utilization of the Database System
3.1 Provision of versatile function for creating necessary materials and secondary data

Tabulating the survey/ examination data and creating secondary data
Making statistical tables
Creating data set necessary for analysis
Other
3.2 Utilization at the call center
3.3 Support for those in need based on the Mental Health and Lifestyle Survey and Pregnancy and Birth Survey

[^0]:    Fractions have been rounded and may not total to $100 \%$.

[^1]:    Excerpt form the statistical study of school health for FY 2010, 2012 conducted by the Ministry of Education, Culture, Science and Technology in Japan

[^2]:    Values in the table are expressed as n (\%).
    The participants who did not mention the issue go to 'Uncertain' category.
    Proportion does not include the number of 'Unclear'.
