## Basic Survey (Radiation Dose Estimates) Reported on 19 May 2014

## 1. Simplified questionnaire

From the end of November through mid-December in 2013, we sent simplified questionnaires to those eligible for Thyroid Ultrasound Examination (around 250,000 excluding residents of nationally designated zones) who had not yet responded to the original questionnaire. In addition, surveys were distributed at municipal offices and by mail on request.
As of 31 March 2014, 44,191 have responded to the simplified questionnaire, which increased the response rates to $25.9 \%, 2.1 \%$ up from the previous one.

| Table 1 |  |  |  |
| :---: | :---: | :---: | :---: |
| Response rates to the Basic Survey |  |  |  |
| As of 31 March 2014 |  |  |  |
| Target population |  | 2,055,585 | , |
| Response | Original questionnaire | 487,855 | 23.7\% |
|  | Simplified questionnaire* | 44,191 | 2.1\% |
|  | Total | 532,046 | 25.9\% |
| *Preliminary figures |  |  |  |

The following tables show the results of the original and simplified questionnaires combined.

## 2. Response Rates and Radiation Dose Estimates

### 2.1 Response Rates of Residents

The overall effective response rate to the Basic Survey (radiation dose estimates), intended for the entire population of Fukushima Prefecture, was $25.9 \%$ ( $532,046 / 2,055,585^{*}$ ) as of 31 March 2014. Providing the simplified questionnaires increased the response rates in the Kennan area to the $20 \%$ level, and to $19.5 \%$ in Aizu and $18.2 \%$ in Minami-aizu, where the response rates had been low. The response rate for the Soso area was $45 \%$, with response rates ranging from $50 \%$ to $60 \%$ by local municipality. (Table 2, Appendix 1)
*The number of people eligible for the Basic Survey was $2,055,585$ instead of $2,056,994$ in previous surveys after considering overlap and additional participants who were left out. We checked the number of responses, dose estimates, and returned results for duplication in light of this change.

### 2.2 Radiation Dose Estimates

Recorded movements of respondents are converted to digital data, and effective external cumulative doses are calculated using the dose calculation system developed by the National Institute of Radiological Sciences. Doses have been estimated for 481,420 of 532,046 respondents ( $90.5 \%$ ) as of 31 March 2014, and the results have been returned to 471,713 respondents. (Table 2)

| Table 2 |  | ponse rat | to the Ba | sic Survey |  | As of | 1 March 2014 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Area(preceding and full-scale surveys) | Target population | Response <br> b | Response rates $\mathrm{c}=\mathrm{b} / \mathrm{a}$ | Completed dose estimation | Proportion $\mathrm{e}=\mathrm{d} / \mathrm{b}$ | Returned results <br> f | Proportion $g=f / b$ |
| Kempoku | 504,089 | 144,116 | 28.6\% | 134,363 | 93.2\% | 131,473 | 91.2\% |
| Kenchu | 557,364 | 128,071 | 23.0\% | 116,709 | 91.1\% | 113,876 | 88.9\% |
| Kennan | 152,236 | 31,144 | 20.5\% | 27,214 | 87.4\% | 26,206 | 84.1\% |
| Aizu | 267,219 | 52,163 | 19.5\% | 39,698 | 76.1\% | 38,094 | 73.0\% |
| Minami-aizu | 30,787 | 5,599 | 18.2\% | 4,148 | 74.1\% | 3,848 | 68.7\% |
| Soso | 195,641 | 88,321 | 45.1\% | 84,614 | 95.8\% | 84,372 | 95.5\% |
| Iwaki | 348,249 | 82,632 | 23.7\% | 74,674 | 90.4\% | 73,844 | 89.4\% |
| Total | 2,055,585 | 532,046 | 25.9\% | 481,420 | 90.5\% | 471,713 | 88.7\% |
| Including Yamakiya of Kawamata, Namie and litate. |  |  |  |  |  |  |  |

### 2.3 Response Rates (Visitors)

The survey questionnaire was distributed upon request to non-residents who were visiting or staying in Fukushima Prefecture at the time of the accident. Of 2,077 responses, doses have been estimated for 1,856 respondents ( $89.4 \%$ ), and the results shall be returned accordingly. (Table 3)

| ble 3 | (Visitors) |  |  |  | As of 31 March 2014 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Number of request | Response | Response rates <br> $\mathrm{c}=\mathrm{b} / \mathrm{a}$ | Completed dose estimation | Proportion <br> $\mathrm{e}=\mathrm{d} / \mathrm{b}$ | Returned results | $\begin{array}{\|r\|} \text { Proportion } \\ g=f / b \end{array}$ |
| 3,809 | 2,077 | 54.5\% | 1,856 | 89.4\% | 1,855 | 89.3\% |

## 3. Results of Radiation Dose Estimates

Radiation doses for a total of 481,420 residents have been estimated to date. The results for 471,565 respondents (excluding radiation workers) suggested that the doses for more than about $90 \%$ of the respondents were $<2 \mathrm{mSv}$ in Kempoku and Kenchu areas. The doses for approximately $91 \%$ of the respondents in Kennan area and more than $99 \%$ of those in Aizu and Minami-aizu areas were <1 mSv . Doses for about $78 \%$ of respondents in the Soso area and more than $99 \%$ of respondents in Iwaki were also <1 mSv. (Table 4)

| Table 4 Estimated external radiation doses (preceding and full-scale survey) |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## 4. Evaluation of the results

The latest effective radiation dose estimates showed similar trends to those observed so far. Since previous epidemiological studies ${ }^{1}$ indicate no significant health effects at doses $\leq 100 \mathrm{mSv}$, we concluded that radiation doses estimated so far are unlikely to cause adverse effects on health, although this conclusion is based on external radiation doses estimated only for the first four months following the accident.

# Thyroid Ultrasound Examination, Fukushima Health Management Survey 

Reported on 19 May 2014

## 1. Summary

### 1.1 Thyroid Ultrasound Examination (TUE) Program

The TUE Program for the fiscal year 2013 started on 22 April 2013, and roughly 158,000 children from 34 municipalities have participated in the program so far. The participation rate from October 2011 through March 2014 is $80.2 \%$ (Appendix 1).
Starting on 1 November 2012, the TUE Program has been carried out at 86 institutions outside Fukushima Prefecture as of 18 April 2014 (Appendix 2). The results have been returned to $97.1 \%$ of the 295,511 participants (Appendices 3 and 4).

Screening test coverage as of 31 March 2014 (last screening on 21 February 2014)

|  | Target Population <br> a | Participants |  | Proportion (\%)$\mathrm{c}(\mathrm{c} / \mathrm{b})$ | Test results |  |  |  |

[^0]
### 1.2 Confirmatory Examination

The number of children who required further testing is 2,070 , of whom $84.7 \%$ underwent the confirmatory testing. Among them, $91.1 \%$ have completed the tests (Appendix 5). In addition to Fukushima Medical University Hospital, two institutes, in Koriyama and Iwaki respectively, have provided confirmatory testing since late July 2013. Confirmatory testing outside Fukushima Prefecture has started in November 2013.

Priority was given to those in urgent clinical need.
Those confirmed within the range of A1 and A2 (including those with other thyroid conditions) were advised to take the next examination.

Those who require 6- or 12 -month follow-up provided by health insurance and those beyond the specified level of A2 were categorized as "Follow-up advised".

## 2. Fine Needle Aspiration Biopsy and Cytology (FNAC)

2.1 Aspiration biopsy cytology results as of 31 March 2014
2.1.1 Target municipalities in FY 2011

| Suspicious or malignant | $15(13$ surgical cases: 1 of benign thyroid nodules; 11 of papillary thyroid <br> carcinoma; <br> 1 suspicious for poorly differentiated thyroid carcinoma) |
| :--- | :--- |
| Male to female ratio | $5: 10$ |
| Mean age (SD, min-max) | $17.3(2.0,13-20)$ <br> $15.7(1.9,11-18)$ at the time of the disaster |
| Mean tumor size | $14.1 \mathrm{~mm}(6.6 \mathrm{~mm}, 6.0-33.0 \mathrm{~mm})$ |

2.1.2 Target municipalities in FY 2012

| Suspicious or malignant | 54 (36 surgical cases: 36 of papillary thyroid carcinoma) |
| :--- | :--- |
| Male to female ratio | $21: 33$ |
| Mean age (SD, min-max) | $17.2(2.7,8-21)$ |
|  | $14.9(2.6,6-18)$ at the time of the disaster |
| Mean tumor size | $14.5 \mathrm{~mm}(7.9 \mathrm{~mm}, 5.2-40.5 \mathrm{~mm})$ |

2.1.3 Target municipalities in FY 2013

| Suspicious or malignant | 21 (2 surgical case: 2 of papillary thyroid carcinoma) |
| :--- | :--- |
| Male to female ratio | $6: 15$ |
| Mean age (SD, min-max) | $16.0(3.1,11-20)$ |
|  | $13.5(3.0,8-18$ at the time of the disaster) |
| Mean tumor size | $13.4 \mathrm{~mm}(6.8 \mathrm{~mm}, 5.1-30.3 \mathrm{~mm})$ |

Total for cases FY 2011 - FY 2013

| Suspicious or malignant | 90 (51 surgical cases: 1 of benign thyroid nodules; 49 of papillary thyroid <br> carcinoma; <br> 1 suspicious for poorly differentiated thyroid carcinoma ) |
| :--- | :--- |
| Male to female ratio | $32: 58$ |
| Mean age (SD, min-max) | $16.9(2.7,8-21)$ <br> $14.7(2.7,6-18)$ at the time of the disaster |
| Mean tumor size | $14.2 \mathrm{~mm}(7.4 \mathrm{~mm}, 5.1-40.5 \mathrm{~mm})$ |

### 2.2 Suspicious or malignant cases on FNAC by age and sex

2.2.1 Suspicious or malignant cases by age as of 11 March 2011

2.2.2 Suspicious or malignant cases by age as of the date of confirmatory examination

### 2.3 Suspicious or malignant cases on FNAC by estimated radiation dose

Forty-five of the 90 cases ( $50 \%$ ) participated in the Basic Survey (radiation dose estimates) and 34 of them have received the results. Among those, 21 ( $61.8 \%$ ) had estimated radiation exposure dose below 1 mSv .

Number of suspicious or malignant cases by age and dose

| Effective dose <br> $(\mathrm{mSv})$ | Sex | Age at the time of disaster |  |  |  |  |
| :---: | :---: | ---: | ---: | ---: | ---: | ---: |
|  |  | $0-5$ | $6-10$ | $11-15$ | $16-18$ | Total |
| $<0.5$ | Male | 0 | 0 | 0 | 2 | 2 |
|  | Female | 0 | 2 | 3 | 5 | 10 |
| $0.5-1.0$ | Male | 0 | 0 | 3 | 1 | 4 |
|  | Female | 0 | 1 | 0 | 4 | 5 |
| $1.0-1.5$ | Male | 0 | 0 | 2 | 1 | 3 |
|  | Female | 0 | 0 | 4 | 1 | 5 |
| $1.5-2.0$ | Male | 0 | 0 | 1 | 0 | 1 |
|  | Female | 0 | 0 | 2 | 1 | 3 |
| $2.0-2.5$ | Male | 0 | 0 | 1 | 0 | 1 |
|  | Female | 0 | 0 | 0 | 0 | 0 |
| Total | Male | 0 | 0 | 7 | 4 | 11 |
|  | Female | 0 | 3 | 9 | 11 | 23 |

2.4 Blood and urinary iodine test results as of 31 March 2014
2.4.1 Blood test results Mean $\pm$ SD (Abnormality ratio)

|  | FT4 1) <br> $(\mathrm{ng} / \mathrm{dL})$ | FT3 2) <br> $(\mathrm{pg} / \mathrm{mL})$ | $\mathrm{TSH} 3)$ <br> $(\mu \mathrm{IU} / \mathrm{mL})$ | $\mathrm{Tg} 4)$ <br> $(\mathrm{ng} / \mathrm{mL})$ | $\mathrm{TgAb} 5)$ <br> $(\mathrm{IU} / \mathrm{mL})$ | TPOAb ) <br> $(\mathrm{IU} / \mathrm{mL})$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Reference Range | $0.8-1.9$ | $7)$ | $0.4-4.0$ | $\leq 32.7$ | $<28.0$ | $<16.0$ |
| 90 suspicious or malignant | $1.2 \pm 0.2(0.0 \%)$ | $3.4 \pm 0.4(0.0 \%)$ | $1.3 \pm 0.7(3.3 \%)$ | $40.6 \pm 85.2(35.6 \%)$ | $-(25.6 \%)$ | $-(13.3 \%)$ |
| Other 1,662 | $1.3 \pm 0.3(1.4 \%)$ | $3.7 \pm 1.0(1.6 \%)$ | $1.9 \pm 13.1(6.2 \%)$ | $34.3 \pm 194.3(16.9 \%)$ | $-(13.7 \%)$ | $-(10.0 \%)$ |

2.4.2 Urinary iodine ( $\mu \mathrm{g} /$ day $)$

|  | Minimum | 25 th percentile | Median | 75th percentile | Maximum |
| :---: | ---: | ---: | ---: | ---: | ---: |
| 90 suspicious or malignant | 42 | 140 | 239 | 381 |  |
| Other 1,660 | 24 | 121 | 197 | 361 | 6,020 |

1) FT4: Free Thyroxine; higher among patients with Graves' disease and lower with Hashimoto's disease.
2) FT3: Free Triiodothyronine; higher among patients with Graves' disease and lower with Hashimoto's disease.
3) TSH: Thyroid Stimulating Hormone; higher among patients with Hashimoto's disease and lower with Graves' disease.
4) Tg : Thyroglobulin; higher when thyroid tissue is destroyed or when thyroid cancer produces thyroglobulin.
5) TgAb: Anti-Thyroglobulin Antibody; higher among patients with Hashimoto's disease and Graves' disease.
6) TPOAb: Anti-Thyroid Peroxidase Antibody; higher among patients with Hashimoto's disease or Graves' disease.
7) Reference range differs according to age.
2.5 Confirmatory test results by municipality as of 31March 2014

Confirmatory test results in FY 2011 (13 municipalities in the nationally designated evacuation zones)

|  | Number of <br> children screened | Number who <br> required <br> confirmatory test | Proportion who <br> required <br> confirmatory test <br> $(\%)$ | Number who <br> underwent <br> confirmatory test | Suspicious or <br> malignant cases 1) | Proportion of <br> suspicious or <br> malignant cases <br> $(\%)$ |

## Appendix 2

Thyroid Ultrasound Examination (TUE) coverage by prefecture
As of 31 March 2014

| Prefecture | Number of <br> test venues | Participants |
| :---: | ---: | ---: |
| Hokkaido | 2 | $\mathbf{3 2 4}$ |
| Aomori | 1 | $\mathbf{1 5 8}$ |
| Iwate | 2 | $\mathbf{1 8 4}$ |
| Miyagi | 2 | $\mathbf{1 , 4 8 2}$ |
| Akita | 1 | $\mathbf{2 0 4}$ |
| Yamagata | 2 | $\mathbf{4 3 0}$ |
| Ibaraki | 2 | $\mathbf{3 9 9}$ |
| Tochigi | 5 | $\mathbf{4 4 0}$ |
| Gunma | 1 | $\mathbf{1 8 2}$ |
| Saitama | 1 | $\mathbf{2 3 5}$ |
| Chiba | 3 | $\mathbf{2 6 9}$ |
| Tōkyō | 10 | $\mathbf{1 , 6 6 7}$ |
| Kanagawa | 4 | $\mathbf{6 1 1}$ |
| Niigata | 1 | $\mathbf{5 6 0}$ |
| Toyama | 1 | $\mathbf{2 4}$ |
| Ishikawa | 1 | $\mathbf{4 1}$ |

| Prefecture | Number of <br> test venues | Participants |
| :---: | ---: | ---: |
| Fukui | 1 | $\mathbf{2 2}$ |
| Yamanashi | 1 | $\mathbf{8 2}$ |
| Nagano | 2 | $\mathbf{1 3 1}$ |
| Gifu | 1 | $\mathbf{4 3}$ |
| Shizuoka | 2 | $\mathbf{1 0 3}$ |
| Aichi | 3 | $\mathbf{1 6 0}$ |
| Mie | 1 | $\mathbf{3 8}$ |
| Shiga | 1 | $\mathbf{1 6}$ |
| Kyōto | 2 | $\mathbf{9 6}$ |
| $\overline{\text { Ösaka }}$ | 6 | $\mathbf{2 0 2}$ |
| Hyōgo | 2 | $\mathbf{1 3 2}$ |
| Nara | 1 | $\mathbf{2 5}$ |
| Wakayama | 1 | $\mathbf{1 2}$ |
| Tottori | 1 | $\mathbf{1 5}$ |
| Shimane | 1 | $\mathbf{1 3}$ |
| Okayama | 3 | $\mathbf{7 6}$ |

| Prefecture | Number of <br> test venues | Participants |
| :---: | ---: | ---: |
| Hiroshima | 1 | $\mathbf{3 6}$ |
| Yamaguchi | 1 | $\mathbf{2 4}$ |
| Tokushima | 1 | $\mathbf{1 0}$ |
| Kagawa | 1 | $\mathbf{2 9}$ |
| Ehime | 1 | $\mathbf{2 0}$ |
| Kōchi | 1 | $\mathbf{1 4}$ |
| Fukuoka | 2 | $\mathbf{7 3}$ |
| Saga | 1 | $\mathbf{7}$ |
| Nagasaki | 2 | $\mathbf{2 3}$ |
| Kumamoto | 1 | $\mathbf{2 5}$ |
| Öita | 1 | $\mathbf{3 5}$ |
| Miyazaki | 1 | $\mathbf{3 5}$ |
| Kagoshima | 1 | $\mathbf{2 8}$ |
| Okinawa | 1 | $\mathbf{1 1 0}$ |
| Total | 84 | $\mathbf{8 , 8 4 5}$ |

Participants underwent testing at venues outside Fukushima carried out either by Fukushima Medical University staff (twice in Niigata and Yamagata respectively, and once in Kanagawa) or by local specialists.

| 16-18 | 7,720 | 8,012 | 15,732 | 6,669 | 8,123 | 14,792 | 249 | 479 | 728 | 0 | 1 | 1 | 14,638 | 16,615 | 31,253 |
| Total | 78,196 | 69,986 | 148,182 | 66,226 | 70,578 | 136,804 | 701 | 1,368 | 2,069 | 0 | 1 | 1 | 145,123 | 141,933 | 287,056 |

Percentages have been rounded and may not total to $100 \%$.
Ages are at the time of the disaster.

### 4.2 Nodule size

| Nodule size | Total |  |  | Test result | Proportion |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Male | Female |  |  |
| None | 283,427 | 143,788 | 139,639 | A1 | 98.7\% |
| $<3.0 \mathrm{~mm}$ | 384 | 174 | 210 | A2 | 0.5\% |
| $3.1-5.0 \mathrm{~mm}$ | 1,194 | 466 | 728 |  |  |
| $5.1-10.0 \mathrm{~mm}$ | 1,449 | 521 | 928 | B | 0.7\% |
| $10.1-15.0 \mathrm{~mm}$ | 376 | 107 | 269 |  |  |
| $15.1-20.0 \mathrm{~mm}$ | 119 | 35 | 84 |  |  |
| $20.1-25.0 \mathrm{~mm}$ | 53 | 16 | 37 |  |  |
| $>25.1 \mathrm{~mm}$ | 54 | 16 | 38 |  |  |
| Total | 287,056 | 145,123 | 141,933 |  |  |

4.3 Cyst size

As of 31 March 2014 (last test on 21 February 2014)

| Cyst size | Total |  |  | Class | \% |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Male | Female |  |  |
| None | 149,967 | 78,886 | 71,081 | A1(52.2\%) | 81.5\% |
| $<3.0 \mathrm{~mm}$ | 83,866 | 43,051 | 40,815 | A2(47.8\%) |  |
| $3.1-5.0 \mathrm{~mm}$ | 46,329 | 20,737 | 25,592 |  |  |
| $5.1-10.0 \mathrm{~mm}$ | 6,753 | 2,406 | 4,347 |  | 8.5\% |
| $10.1-15.0 \mathrm{~mm}$ | 115 | 39 | 76 |  | 18.5\% |
| $15.1-20.0 \mathrm{~mm}$ | 14 | 1 | 13 |  |  |
| $20.1-25.0 \mathrm{~mm}$ | 8 | 1 | 7 | B(0.004\%) | 0.004\% |
| $>25.1 \mathrm{~mm}$ | 4 | 2 | 2 |  |  |
| Total | 287,056 | 145,123 | 141,933 | - |  |

Appendix 5

# Implementation status of the Fukushima health survey: 

## 'Comprehensive Health Check'

## 1. Purpose

The Fukushima Daiichi Nuclear Power Plant accident caused by the Great East Japan Earthquake in March 2011 led to a large-scale evacuation of residents in surrounding areas, especially the government-designated Evacuation Zones and Evacuation Warning Zones. Many of the Fukushima evacuees have since been concerned about their own health due primarily to the sudden and notable changes in their lifestyle, diet and exercise habits, in addition to the loss of opportunity to undergo the Comprehensive Health Check.

In order to ensure its residents' health affected by the nuclear incident, the residents need to know current health status of their own. This is essential for not only prevention of lifestyle diseases, but also early detection and early treatment of various illnesses. To this end, the Comprehensive Health Check is available for all residents of the Evacuation Zones.

## 2. Target population

Residents of the Evacuation Zones at the time of designation in 2011, as well as those determined to require the service based on the Basic Survey.

## 【Evacuation Zones】

All parts of Tamura, Minami-soma, Kawamata, Hirono, Naraha, Tomioka, Kawauchi, Okuma, Futaba, Namie, Katsurao and Iitate.
A part of Date (areas containing specific spots recommended for evacuation).

## 3. Implementation status

(1) Items of the Comprehensive Health Check

Examination items have been selected for each age group in order to allow residents of the Evacuation Zones to know their own health status, which is essential for not only prevention of lifestyle diseases but also early detection and early treatment of various illnesses.

For those aged 16 years and older, the examination items based on Article 20, the 'Specific Comprehensive Health Check,' in accordance with those of "the Act on Assurance of Medical Care for Elderly People (Act No. 80, 1982)," will be implemented, including other additional items (hereafter referred to as the 'additional items') such as complete blood count.

【Examination items by age group】

| Age group | Examination items |
| :---: | :---: |
| $0-6$ years （preschool children and infants） | Height，body weight，complete blood count（red blood cell count（RBC），hematocrit， hemoglobin，platelet count，white blood cell count（WBC），differential WBC count） |
| $\begin{aligned} & \quad 7-15 \text { years } \\ & \text { (1 }{ }^{\text {st }} \text { year primary school }-3^{\text {rd }} \text { year } \\ & \text { junior high school) } \end{aligned}$ | Height，body weight，blood pressure，complete blood count（RBC count，hematocrit， Hemoglobin，platelet count，WBC count，differential WBC count） <br> ［Additional items tested on request］ <br> Blood biochemistry（AST，ALT，$\gamma-\mathrm{GT}, \mathrm{TG}, \mathrm{HDL-C}, \mathrm{LDL-C}, \mathrm{HbA}_{1} \mathrm{c}$ ，fapting blood glucose， serum creatinine，uric acid） |
| $\geq 16$ years | Height，body weight，abdominal circumference（BMI），blood pressure， complete blood count（RBC count，hematocrit，hemoglobin，platelet count，WBC count， differential WBC count），urine test（uric blood，urine protein，urine sugar），blood biochemistry（AST，ALT，$\gamma-\mathrm{GT}, \mathrm{TG}, \mathrm{HDL-C}, ~ L D L-C, \mathrm{HbA}_{1} \mathrm{c}$ ，fasting blood glucose， serum creatinine，eGFR，uric acid） <br> ＊Underlined items are additional check items which are generally not included in the Specific Comprehensive Health．Check |

（2）Implementation status
Procedures for implementing the Comprehensive Health Check have been established to make the most of the existing medical checkup system，in consideration with the convenience for examinees that are forced to evacuate their homes，often ending up outside Fukushima．【Residents staying in Fukushima】

For eligible residents aged 16 years and older，the Specific Comprehensive Health Check organized by municipal governments with the additional checkup items was conducted so that they can have the existing health checkups，＂the Comprehensive Health Check，＂and the health survey for the prefectural residents all at once．For those who missed the chance，the Comprehensive Health Check was offered in the form of a mass health checkup at 24 sites in Fukushima， 69 times in total．Additionally，a total of 510 collaborating medical institutions in Fukushima agreed to provide the Comprehensive Health Check and made it available to eligible residents around the time of mass medical examinations．

For those aged 15 years and younger，pediatric expertise was needed to treat diseases specific to pediatric patients，and thus the Comprehensive Health Check was conducted with the aid of pediatricians at 104 institutions in Fukushima．
【Residents staying outside Fukushima】
For eligible residents staying outside Fukushima，the Comprehensive Health Check was made available at a total of 951 collaborating medical institutions outside Fukushima．Of these， 453 institutions offered the service to those aged 16 years and older， 133 institutions with pediatric capabilities did so to those aged 15 years and younger，while 365 institutions did so to both age groups．

【Implementation between FY 2011 and FY 2013】
Implementation Status of the Fukushima health survey: ‘Comprehensive Health Check' FY 2011-2013
(Units: persons, \%)

$\dagger$ Inside/outside: Inside or outside Fukushima Prefecture.
$\dagger \dagger$ Inside/outside: Both inside and outside Fukushima Prefecture
*1: Others (inside Fukushima; cases contracted by municipal government to a local association or institution)
*2: Others (outside Fukushima; cases contracted by municipal government to a medical examination agency).
*3: Not finalized (still being assessed due to redundancy etc.).

## 4. Evaluation of status

In the $\geq 16$-year age group, $23.2 \%$ of the eligible residents underwent the health checkup in FY 2013, down from $30.9 \%$ in FY 2011 by 7.7 points and from $25.4 \%$ in FY 2012 by 2.2 points. Likewise in the $\leq 15$-year age group, the examination rate was $38.7 \%$ in FY 2013, down from $64.5 \%$ in FY 2011 by 25.8 points and from $43.5 \%$ in FY 2012 by 4.8 points.

One possible reason behind such marked declines is that the annual Comprehensive Health Check has become widely accepted since its initiation in 2011, creating a sense of security and a resultant lack of urgency among the eligible residents. Concerning the mass checkup conducted by Fukushima Medical University, residents had to apply for an examination date of their choice in advance, but the application deadline was too early for some residents to be in time.

Considering the above situations, in order to achieve a higher examination rate, it is of our intention to extend our application deadline and continue to provide quality services from FY 2014 and also take the following measures:

## - Sending of reminders

We will effectively enhance our publicity activities in collaboration with municipal Public Health Departments, while continuing on from last year to send out reminders
even after the start of the examination period．
－Holding community meetings
Continuing on from FY 2012 and 2013，we will host community－level，general health consultation meetings at more venues to raise awareness for health．
－Preparation of a pamphlet about how to interpret examination results
We will produce a pamphlet outlining approaches to healthy lifestyle to be enclosed with the examination results．

## 5．Implementation plan for FY 2014

【Residents staying in Fukushima】
Continuing on from FY 2013，the additional examination items will be made available for eligible residents at the Specific Health Check or the Multiphasic Health Checkup provided by municipal governments．At the same time，we will conduct mass as well as individual health checkups at medical institutions，while striving to start pediatric checkups at an earlier date（expected to start in July）．

## 【Residents staying outside Fukushima】

Continuing on from FY 2013，we will aim to expand the number of institutions providing the services outside Fukushima，as well as to start the examination period at an earlier date（expected to start in the summer）．

6. Analysis of interannual data

Continuing on from FY 2013, we will analyze the results of health checkups, continueing to reflect analysis-related requests from municipal governments.

# Outline of Mental Health and Lifestyle Survey for FY 2012 Reported on 19 May 2014 

## 1. Purpose

Based on the results of Mental Health and Lifestyle Survey for FY 2011, we have conducted Mental Health and Lifestyle Survey for FY 2012 to convey a strong message of ongoing care and support to the participants, and to provide further support by understanding the changes in their situation that have occurred as well as the causes of these changes.

## 2. Method

### 2.1 Group

The group of the FY 2012 survey were residents of nationally designated evacuation zones as of 11 March 2011 and born before 1 April 2012. Specifically, there were 211,615 who were registered residents of the following municipalities: Hirono, Naraha, Tomioka, Kawauchi, Okuma, Futaba, Namie, Katsurao, Iitate, Minamisoma, Tamura, Kawamata, and part of Date (the area with a specific spot recommended for evacuation).

4,625 participants born between April 2, 2009 and April 1, 2012.
Age 4-6 Survey:
Primary School Survey:
Middle School Survey:
General Survey:

5,047 participants born between April 2, 2006 and April 1, 2009.
11,413 participants born between April 2, 2000 and April 1, 2006.
6,023 participants born between April 2, 1997 and April 1, 2000.
184,507 participants born on or before April 1, 1997.

### 2.2 Survey Methods

Survey sheets (self-report or guardian response) were mailed to the aforementioned participants, according to the aforementioned classifications.

### 2.3 Data Tabulation Period

Data tabulation period lasted from February 7, 2013 to October 31, 2013.

### 2.4 Number of Respondent and Number of Valid Responses

The number of respondents (response rate) was 2,143 (46.3\%) for the Age 0-3 Survey, 2,231 (44.2\%) for the Age 4-6 Survey, 4,703 (41.2\%) for the Primary School Survey, 2,126 (35.3\%) for the Middle School Survey, and 55,076 (29.9\%) for the General Survey.
The number of valid responses (valid response rate) was 2,143 (46.3\%) for the Age 0-3 Survey, 2,230 $(44.2 \%)$ for the Age 4-6 Survey, 4,683 (41.0\%) for the Primary School Survey, 2,118 (35.3\%) for the Middle School Survey, and 55,064 (29.8\%) for the General Survey. There were cases among the aforementioned number of the respondents where the surveys were submitted blank, and these were excluded from the data tabulation. There were also cases among the responses where one respondent submitted multiple surveys. In these cases, only one survey per person was included in the data tabulation.
The results for each item were totaled by each survey sheet. Due to missing values in certain items, the totals may not be consistent with the aforementioned number of valid responses.

## 3. Results

3.1 Age 0-3

- While non-school age children were classified as Group 1 in the FY 2011 survey, they were classified and totalled as Age $0-3$ or Age 4-6 in the FY 2012 survey.
- Of 4,625 respondents, there were $2,143(46.3 \%)$ valid responses.
- Regarding the children's health conditions, there was a generally favorable result, with $98.5 \%$ of responses indicating no particular issues ('Extremely good', 'Good', 'Normal'). However, 1.5\% responded indicating that there were issues ('Bad', 'Extremely bad').
- Average sleeping time was 9:09 p.m. and average waking time was 7:08 a.m. Length of sleep was 10 hours and 0 minutes on average. $87.2 \%$ responded that they took naps, with average napping time of 1 hour and 54 minutes. The length of sleep is almost the same as that of their coevals (3-year-old children) in the national survey. ${ }^{2}$

### 3.2 Age 4-6

- Of 5,047 respondents, there were $2,230(44.2 \%)$ valid responses.
- Regarding the children's health conditions, there was a generally favorable result, with $98.2 \%$ of responses indicating no particular issues ('Extremely good', 'Good', 'Normal'), which was almost the same as the FY 2011 survey ( $97.8 \%$ ). $1.8 \%$ responded 'Bad', and there were no responses of 'Extremely bad'.
- In the survey on children's affect and behavior (SDQ Japanese Edition), $16.5 \%$ of the 2,221 valid respondents scored 16 or higher, the screening score from the preceding study, and $5.9 \%$ scored 20 or higher, the initial support standard. Compared to the FY 2011 Survey ( $24.4 \%$ scoring 16 or higher, $11.3 \%$ scoring 20 or higher), there was an improving tendency in score distribution, with the number scoring 16 or higher decreasing to about $2 / 3$, and the number scoring 20 or higher decreasing to about half.
For boys, of the 1,119 valid respondents, $18.4 \%$ scored 16 or higher, and $7.0 \%$ scored 20 or higher, while for girls, of the 1,102 valid respondents, $14.5 \%$ scored 16 or higher, and $4.8 \%$ scored 20 or higher. This tendency for girls to score lower was similar to the FY 2011 survey.
- Average length of sleep was 9 hours and 45 minutes, and average length of naps was 1 hour and 33 minutes. Length of sleep was almost the same as the FY 2011 survey. While length of naps appeared to have decreased, we cannot make a simple comparison since the FY 2011 survey totalized children from age 0 to 6 . The length of sleep is almost the same as that of their coevals (5-year-old children) in the national survey. ${ }^{2}$

### 3.3 Primary School

- Of 11,413 respondents, there were 4,683 (41.0\%) valid responses.
- Regarding health conditions, there was a generally favorable result following the FY 2011 survey ( $97.1 \%$ ), with $98.0 \%$ of responses indicating no particular issues ('Extremely good', 'Good', 'Normal'). On the other hand, $2.0 \%$ indicated issues, and responded either 'Bad' (1.9\%) or ‘Extremely Bad’ (0.1\%).
- Regarding SDQ scores, of the 4,673 valid respondents, $16.3 \%$ scored 16 or higher and $6.4 \%$ scored 20 or higher. These ratios are almost the same as the Age 4-6 group, and the ratio of high scores has decreased compared to the FY 2011 survey ( $22.0 \%$ scoring 16 or higher, $10.9 \%$ scoring 20 or higher), demonstrating an improving tendency.
- Considering boys and girls separately, $19.1 \%$ of boys scored 16 or higher, and $7.8 \%$ scored 20 or higher, while $13.2 \%$ of girls scored 16 or higher, and $4.9 \%$ scored 20 or higher, showing that girls tended to score lower. This tendency is identical to the FY 2011 survey.
- Length of sleep averaged 8 hours and 53 minutes. This is about 20 minutes longer compared to the FY 2011 survey ( 8 hours and 36 minutes), and was almost identical to the national survey. ${ }^{3}$
- Regarding fitness habits, fewer than half of respondents (45.1\%) responded that they rarely exercise outside of physical education, which is an improvement since the FY 2011 survey (53.0\%). However, compared to the report from the national survey, ${ }^{4}$ where the group that responded that they occasionally or never exercise outside of physical education classes in school consisted of $10.9 \%$ of boys and $21.6 \%$ of girls, fitness habits are still insufficient.

### 3.4 Middle School

- Of 6,023 participants, there were 2,118 (35.2\%) valid responses.
- Regarding health conditions, there was a generally favorable result, with $96.6 \%$ of responses indicating no particular issues ('Extremely good', 'Good', 'Normal'). On the other hand, 3.4\% indicated issues, and responded either 'Bad' ( $2.8 \%$ ) or 'Extremely bad' $(0.6 \%)$.
- Regarding SDQ scores, of the 2,094 valid respondents, $12.3 \%$ scored 16 or higher and $6.2 \%$ scored 20 or higher. The percentage scoring 16 or higher was lower than the Age 4-6 and Primary School groups. Furthermore, the ratio has decreased compared to the FY 2011 survey ( $16.2 \%$ scoring 16 or higher, $7.7 \%$ scoring 20 or higher), demonstrating an improving tendency.
Considering boys and girls separately, for boys, of the 1,035 valid respondents, $12.6 \%$ scored 16 or higher, and $6.6 \%$ scored 20 or higher, while $12.1 \%$ of girls scored 16 or higher, and $5.9 \%$ scored 20 or higher, and no gender differences were found.
- Length of sleep averaged 7 hours and 9 minutes. This is about 15 minutes longer compared to the FY 2011 survey ( 6 hours and 53 minutes), and was almost the same as the national survey ${ }^{3}$ ( 7 hours and 14 minutes).
- Regarding fitness habits, $34.3 \%$ responded that they rarely exercise outside of physical education, which is an improvement from the FY 2011 survey (47.0\%). However, compared to the results from the national survey, ${ }^{5}$ where the group that responded that they occasionally or never exercise consisted of $9.3 \%$ of boys and $29.1 \%$ of girls, fitness habits are still insufficient.

## General Summary of Children

The SDQ was used as an indicator to evaluate children's mental health. Similar to the FY 2011 survey, the percentage of people scoring 16 or higher on the SDQ was high for all groups compared to the percentage $(9.5 \%)$ in preceding research ${ }^{6}$ that used the general population in unaffected areas of Japan. Regardless, the ratio of SDQ high scores declined in all age groups compared to the FY 2011 survey, indicating a recovering trend for mental health. Length of sleep was also extended in all age groups compared to the FY 2011 survey, ascertaining that they are approaching the length of sleep in the preceding research. In regards to fitness habits, the ratio of the group that rarely exercises is in a declining tendency, but it was indicated that fitness habits are still insufficient compared to the national survey, though a direct comparison is difficult due to differing survey contents.

### 3.5 General (people born on or before April 1, 1997)

## 3.5-1 Mental Health

- General mental health conditions (K6) apply to 3.0\% of Japanese regional residents in normal times if a score of 13 is used as the cut-off value. If trauma responses (PCL) scores of $\geq 44$ or $\geq 50$ are used as the cut-off value, rescue workers after the New York terrorist attacks in the USA apply to $20.1 \%$ or $11.1 \%$ respectively. ${ }^{8}$ Using these preceding studies as reference, physicians and other professionals of Fukushima Medical University defined the standards for requiring support to be a score of 17 or higher on the K6, and 61 or higher on the PCL.
- $11.7 \%$ scored 13 or higher on the K6, showing that scores had decreased compared to the FY 2011 survey, but are still high compared to the ratio of people scoring higher than the cutoff value during normal times. In contrast to $9.8 \%$ of males scoring 13 or higher, $13.2 \%$ of females scored 13 or higher. Considering the age groups differently, $13.8 \%$ of respondents of 70 years or older scored 13
or higher, while $7.6 \%$ of respondents aged 10-19 years scored 13 or higher. These tendencies were similar to the FY 2011 survey.
- On the PCL, $17.4 \%$ scored 44 or higher, which was relatively low compared to the FY 2011 survey, but still very high. The gender and age tendencies were similar to those of the K6.

## 3.5-2 Lifestyle

- $17.9 \%$ of respondents evaluated their own health (subjective sense of well-being) as being 'Bad' or 'Extremely bad', and this ratio has decreased compared to the FY 2011 survey.
- $23.9 \%$ 'gained 3 kg or more' of body weight after the earthquake, while $14.8 \%$ 'lost 3 kg or more'. The percentage of people who gained weight was higher.
- $62.4 \%$ of respondents were dissatisfied with their sleep, but this percentage has decreased since the FY 2011 survey.
- $47.3 \%$ of respondents rarely exercised, showing that compared to the FY 2011 survey ( $50.9 \%$ ), the percentage of people with fitness habits have increased.
- The percentage of current smokers was $20.4 \%$, nearly identical to the FY 2011 survey ( $20.7 \%$ ). The percentage of current drinkers was $43.6 \%$, nearly identical to the 2011 survey ( $44.1 \%$ ), and the percentage of heavy drinkers (drinking at least 360 ml per day) was also nearly identical to the FY 2011 survey ( $9.6 \%$ ), at $9.9 \%$.

## Outline of Support Results

## 1. Purpose

Following the Mental Health and Lifestyle Survey for FY 2012, the response contents were evaluated and analyzed by physicians of the Fukushima Medical University, and the Mental Health Support Team, composed of clinical psychologists, health nurses, and nurses, administered telephone counselling and other services with the purpose of ensuring the improvement of conditions of people assessed to be in need of counselling or support, or connecting them to health/medical institutions.

## 2. Method

### 2.1 Support Group

Respondents of the Mental Health and Lifestyle Survey for FY 2012, who are residents of statedesignated evacuation areas born on or before 1 April 2012, and apply to the following selection criteria.

### 2.2 Selection Criteria

## A) Support via Telephone (henceforth 'Telephone Support')

a) Support Standards Due to Scale Scores (henceforth 'Support due to Scales')

Children: People who score 20 or higher on the SDQ (on children's affect and behavior).
General: People who score 17 or higher on the K6 (general mental health conditions) or 61 or higher on the PCL (trauma response).
b) Support Standards Due to Items Other than Scales

Children: People assessed to require support based on the contents of free description or descriptions in margins.
General: People with a previous history of high blood pressure or diabetes who reported that they have not been seeing a doctor, with a Body Mass Index (BMI: Calculated from height and weight given in the survey) of $30.0 \mathrm{~kg} / \mathrm{m}^{2}$ or more, and who have gained 3 kg or more in body weight since the earthquake (high risk for high blood pressure/diabetes).
People with a previous history of psychiatric illness, and who reported that they have not been seeing a doctor.
People assessed to require support based on the contents of free description or descriptions in margins.

## B) Support via Writing (henceforth 'Written Support')

a) Support Standards Due to Scale Scores

Children: People who score 16 or higher on the SDQ (on children's affect and behavior), and do not meet the support criteria for telephone support.
General: People who score 13 or higher on the K6 (general mental health conditions) or 44 or higher on the PCL (trauma response), and who do not meet the support criteria for telephone support.

## b) Support Standards Due to Items Other than Scales

Children: No selection criteria.
General: People who are not participating in recommended care, or people who are dissatisfied with their quality of sleep or feel depressed throughout the day and whose activity has declined, who have not made a medical visit, and do not meet any of the above support criteria.
People with a score of 2 or more out of 4 on CAGE (alcohol dependency scale)

### 2.3 Support Methods

Telephone support survey contents were screened by the Mental Health Support Team, and telephone support was administered.
Written support survey contents were screened by the Mental Health Support Team, and a letter in an envelope with a return postcard was mailed to them. The subject's desire for telephone support was screened based on the reply on the postcard, and telephone support was provided for those who indicated their desire for support, or those who were assessed to require support based on the reply content.

## 3. Results

Of the respondents in the Mental Health and Lifestyle Survey for FY 2012, there were 1,474 children and 16,242 adult who required support. 2,657 respondents who required support met the CAGE (alcohol dependency scale) criteria alone.
The breakdown of the children who required support is as follows. There were 674 telephone support group and 800 written support group. Of the latter, 41 people were assessed to require telephone support based on the reply content, so there was a total of 715 ( 406 boys ( $56.8 \%$ ), and 309 girls ( $43.2 \%$ )). Among these, telephone support was successfully administered to $623(87.1 \%) .408(65.5 \%)$ of these support group resided within the prefecture, and 215 ( $34.5 \%$ ) resided outside the prefecture.
The breakdown of the general support groups is as follows. Among the telephone support group, there were 4,130 group of support due to scales ( 1,595 male ( $38.6 \%$ ), 2,535 female ( $61.4 \%$ ), and 1,944 group of items other than scales ( 688 male ( $35.4 \%$ ), 1,256 female ( $64.6 \%$ ), for a total of 6,074 group. Among these, telephone support was successfully administered to 5,324 (87.7\%). 4,277 (80.3\%) of these support group resided within the prefecture, and 1,047 ( $19.7 \%$ ) resided outside the prefecture. There were 10,168 group of written support. Among these, there was a total of 701 respondents who were assessed to require support via telephone based on their reply contents, with 535 group of support due to scales ( 242 male ( $45.2 \%$ ), 293 female ( $54.8 \%$ )), and 166 group of support due to items other than scales ( 92 male ( $55.4 \%$ ), 74 female ( $44.6 \%$ )). Among these, telephone support was successfully administered to 667 $(95.1 \%) .533(79.9 \%)$ of these support group resided within the prefecture, and 134 ( $20.1 \%$ ) resided outside the prefecture.
Information was provided to support group for whom telephone support was not administered due to absence or other reasons, apart from death, by sending a pamphlet related to mental health, lifestyles, and care prevention. Also, information was provided for support group who met only the CAGE criteria by sending them a pamphlet related to drinking and mental health.
In the telephone support for children, $528(84.7 \%)$ were classified as Follow-up Group 1, and $82{ }^{1}$
$(13.2 \%)$ were classified as Follow-up Group 2. Also, when classifying the contents discussed within the support according to the Categories of Problems that Surround Group, the category of Children's Reactions included reaction to earthquake/radiation and effects on school life, and the category of Problems with Guardian/Household included guardians themselves and family relationships.
In the general telephone support, 4,277 respondents $(80.3 \%)$ were classified in Follow-up Group 1, and 866 respondents ( $16.3 \%$ ) were classified in Follow-up Group 2. Of the written support group, 559
( $83.9 \%$ ) were classified in Follow-up Group 1, and 89 respondents ( $13.3 \%$ ) were classified in Follow-up
Group 2. Also, when classifying the contents discussed within the support according to the Categories of Problems that Surround Group, the category of One's Own Reactions included physical problems and sleep disturbance, the category of Problems within Family included changes in daily lifestyle, and the category of Problems in Social Life included dissatisfaction with government policies/issues of compensation.
From this point forward, it will be necessary to cooperate with municipalities, the Fukushima Mental Care Center, and other organizations, to provide continued support.

1) Follow-Up Group 1: Group assessed to be able to cope on their own, including cases where situational improvement has been screened in the aspects of physical condition or environment, and cases where the use of support resources has been screened.
2) Follow-Up Group 2: Group assessed to have some concerns left, including those with feelings of unwellness or strong aftereffects of the disaster, and those with social/school maladjustment or isolation.

1) Mental Health and Lifestyle Survey of the 14th Prefectural Oversight Committee Meeting for Fukushima Health Management Survey for FY 2012

## I. Purpose

Our goal is to comprehend physical and mental health status of expectant and nursing mothers so that we can alleviate their anxiety and provide them with necessary care, and also accurately recognize their status quo, opinions and requests. Based on this survey, these data will be used to provide quality Perinatal care services offered in Fukushima in the future.
II. Survey implementation status in FY 2013

1. Target population
-Women who received a maternal and child handbook from municipal government in Fukushima Prefecture between August 1, 2012 and July 31, 2013.
-Women who received a maternal and child handbook from a location outside Fukushima during the above time period, and then returned to give birth in Fukushima.
2. Implementation status
(1) Response rates

| Survey year | Number of <br> surveys sent | Number responded <br> (response rate $\%$ ) |
| :---: | :---: | :---: |
| FY $2013 *$ | 15,187 | $5,056(33.3)$ |
| FY 2012 | 14,516 | $7,181(49.5)$ |
| FY 2011 | 16,001 | $9,316(58.2)$ |

NB : Respondents were asked to submit the survey form after filling out the information on the baby's one-month old checkup results.
(2) Status of support provision

Survey responses were used to identify mothers in need of support, and to provide them with an opportunity to consult specialists such as midwives and public health nurses through telephone counseling, pertaining to concerns about their health- or childcare-related matters. We have also established a support system through e-mail to give advice to those in need.
(1) Telephone counseling

| Survey year | Number responded | Number (\%) in need of support | Type of response that prompted support |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | Depressionrelated items | Free comments |
| FY 2013* | 5,056 | 820 (16.2) | 517 (63.0) | 303 (37.0) |
| FY 2012 | 7,181 | 1,104 (15.4) | 751 (68.0) | 353 (32.0) |
| FY 2011 | 9,316 | 1,401 (15.0) | 1,224 (87.4) | 177 (12.6) |

(2) E-mail counseling

| Survey year | Number of <br> consultations |
| :---: | :---: |
| FY $2013 \%$ | 1 |
| FY 2012 | 6 |
| FY 2011 | 13 |

(3) Other matters

A booklet containing easy-to-understand information about maintaining mental health and also about radiation, entitled 'Mental and Physical Health Support Book for Children and Parents' (issued by the Fukushima Prefectural Children and Families Section), has been sent to all eligible residents.
3. Major survey items (concerning next pregnancy)

Analysis population:
(FY 2013 survey) Of the respondents who submitted the form between December 24, 2013 and January 15,2014 , data entry of 3,415 cases was completed. Of those, 11 were excluded ( 6 cases beyond the scope of the survey, 4 cases of no answer or refusal and 1 redundant case), and thus data from 3,404 respondents were analyzed.
(FY 2012 survey) 7,139 valid respondents who submitted the form between December 14, 2012 and November 30, 2013 were analyzed.

Are you planning your next pregnancy and delivery?

| Response | FY 2013 |  | FY 2012 |  |
| :---: | ---: | ---: | ---: | ---: |
| Yes | 1,844 | $(54.2)$ | 3,775 | $(52.9)$ |
| No | 1,510 | $(44.4)$ | 3,239 | $(45.4)$ |
| No/invalid <br> answer | 50 | $(1.5)$ | 125 | $(1.8)$ |

If you answered 'Yes' above (= planning next pregnancy), what services would you wish to have (multiple answers allowed)?

| Response | FY 2013 |  | FY 2012 |  |
| :--- | ---: | ---: | ---: | :---: |
| Improved childcare facilities, extended- <br> hours childcare, sick child care | $1,225 \quad(69.4)$ | $2,435 \quad$ (66.2) |  |  |
| Childcare-/pediatric medicine-related <br> services | $1,177 \quad(66.7)$ | $2,613 \quad$ (71.0) |  |  |
| Improved maternity and parental leave <br> systems | $988 \quad(56.0)$ | $1,893 \quad$ (51.4) |  |  |
| Information on radiation and its health <br> risks | $733 \quad(41.5)$ | $2,220 \quad$ (60.3) |  |  |
| Other | $171 \quad(9.7)$ | 247 | $(6.7)$ |  |

※Denominator is the number of valid respondents (1,765 in FY 2013; 3,681 in FY 2012).
If you answered 'No' above (= no plan for next pregnancy), please provide the reason (multiple answers allowed).

| Response | FY 2013 |  | FY 2012 |  |
| :--- | ---: | ---: | ---: | ---: |
| Not wanted | 736 | $(49.2)$ | 1,690 | $(52.6)$ |
| Still busy with ongoing childcare | 527 | $(35.2)$ | 1,153 | $(35.9)$ |
| Age- or health-related issue | 486 | $(32.5)$ | 1,012 | $(31.5)$ |
| Lack of financial stability | 331 | $(22.1)$ | 828 | $(25.8)$ |
| Lack of support with housework or <br> childcare | 147 | $(9.8)$ | 310 | $(9.7)$ |
| Lack of childcare facilities/services | 95 | $(6.4)$ | 222 | $(6.9)$ |
| Still worried about radiation effect | 92 | $(6.1)$ | 475 | $(14.8)$ |
| Still living away from family members | 25 | $(1.7)$ | 78 | $(2.4)$ |
| Still living as an evacuee | 21 | $(1.4)$ | 78 | $(2.4)$ |
| Other | 228 | $(15.2)$ | 81 | $(2.5)$ |

※Denominator is the number of valid respondents (1,496 in FY 2013; 3,212 in FY 2012).
4. Evaluation of survey results

- Although the response rate was initially $58.2 \%$ in FY 2011, it decreased by approximately $10 \%$ to 49.5\% in FY 2012. Likewise in FY 2013, the response rate obtained so far is approximately $10 \%$ lower than the levels recorded around the same time in previous years; therefore, we plan to send out a reminder in May to those who are yet to respond.
- The rate of respondents who received telephone counseling increased slightly in FY 2013 compared to FY 2012. This is because of our greater focus on such free comments as seeking advice on childcare issues or indicating physical/mental distress of the respondent, enabling more precise support services.
- At present, the number of respondents who are planning next pregnancy and delivery is on the rise in

FY 2013 compared to FY 2012. Desired services are now 'improved childcare facilities, extended-hours childcare, sick child care' rather than 'childcare-/pediatric medicine-related services,' and differ from the FY 2012 data. Furhtermore, in those who have no plan for next pregnancy, the most prevailing reason is 'not wanted' in both FY 2013 as with 2012.
III. Survey implementation plan for FY 2014 (draft)

1. Survey in FY 2014
(1) Target population
-Women who received a maternal and child health handbook from municipal government in Fukushima Prefecture between August 1, 2013 and July 31, 2014.
oWomen who received a maternal and child health handbook from a location outside Fukushima during the above time period, and then returned to give birth in Fukushima.
(2) Procedure and time of survey

A questionnaire survey will be conducted in late November 2014.
2. Closer collaboration with affiliated organizations to improve the support system for expectant and nursing mothers

We will seek closer collaboration with affiliated organizations, while taking in various opinions from different communities, in order to achieve a higher response rate and ultimately to improve the support system for expectant and nursing mothers based on the survey results.
(1) Questionnaire survey in municipal government officers

We will carry out a questionnaire survey in persons in charge of maternal and child health in municipal governments and gather their views on the surveys and support systems.
(2) Survey outcome report meeting

In order to seek closer collaboration with municipal governments, we will host FY 2012 survey outcome report meetings for public health nurses and other concerned staff members in municipal governments as scheduled below.

| Area | Date | Venue |
| :---: | :---: | :--- |
| Kempoku | Fri, May 23, 2014 | Fukushima Youth Hall |
| Kenchu and Kennan | Mon, June 9, 2014 | Fukushima Agricultural <br> Technology Center |
| Aizu and <br> Minamiaizu | Tue, June 24, 2014 | Aizuwakamatsu Lifelong <br> Learning Center |
| Soso | Mon, June 2, 2014 | Minamisoma Hara Welfare Hall |
| Iwaki | Fri, June 13, 2014 | Iwaki Labor Welfare Hall |

(3) Preparation and distribution of survey leaflets

In order to call for cooperation to raise awareness of survey respondents, survey leaflets will be distributed to obstetrics clinics and municipal government offices in Fukushima.

[^0]:    Fractions have been rounded and may not total to $100 \%$.
