## Basic Survey (Radiation Dose Estimates)

Reported on 12 February 2015

## 1. Response Rates and Radiation Dose Estimates

### 1.1 Response Rates of Residents

The overall effective response rate to the Basic Survey (radiation dose estimates), which targeted the entire population of Fukushima Prefecture, was $27.0 \%$ ( $554,241 / 2,055,383$ ) as of 31 December 2014. Response rate of the simplified questionnaire was $3.1 \%$ ( $63,451 / 2,055,383$ ). (See Table 1)

| Table 1 |  |  |  |
| :---: | :---: | :---: | :---: |
| Response rates to the Basic Survey |  |  |  |
| As of 31 December 2014 |  |  |  |
| Target population |  | 2,055,383 |  |
| Response | Original questionnaire | 490,790 | 23.9\% |
|  | Simplified questionnaire* | 63,451 | 3.1\% |
|  | Total | 554,241 | 27.0\% |
| *Preliminary figures <br> Fractions have been rounded. |  |  |  |

The following tables show the results of the original and simplified questionnaires combined.

### 1.2 Radiation Dose Estimates

It has been almost four years since the Great East Japan Earthquake and the Fukushima Daiichi nuclear disaster, and we continue to receive responses from participants. Doses have been estimated for 536,394 of 554,241 respondents ( $96.8 \%$ ) as of 31 December 2014, and the results have been returned to 531,454 respondents. (See Table 2)

The number of returned results has increased by 19,260 since 31 October 2014.

| Table 2 | Response rates to the Basic Survey |  |  |  |  | As of 31 December 2014 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Area(preceding and full-scale surveys) | Target population | Responses | Response rate $\mathrm{c}=\mathrm{b} / \mathrm{a}$ | Completed dose estimates | Proportion $\mathrm{e}=\mathrm{d} / \mathrm{b}$ | Returned results f | Proportion $g=f / b$ |
| Kempoku | 504,062 | 150,493 | 29.9\% | 146,074 | 97.1\% | 144,569 | 96.1\% |
| Kenchu | 557,266 | 132,179 | 23.7\% | 128,633 | 97.3\% | 127,849 | 96.7\% |
| Kennan | 152,229 | 33,465 | 22.0\% | 32,360 | 96.7\% | 31,955 | 95.5\% |
| Aizu | 267,205 | 55,907 | 20.9\% | 53,301 | 95.3\% | 52,482 | 93.9\% |
| Minami-aizu | 30,787 | 6,171 | 20.0\% | 5,795 | 93.9\% | 5,726 | 92.8\% |
| Soso | 195,608 | 88,916 | 45.5\% | 86,268 | 97.0\% | 86,099 | 96.8\% |
| Iwaki | 348,226 | 87,110 | 25.0\% | 83,963 | 96.4\% | 82,774 | 95.0\% |
| Total | 2,055,383 | 554,241 | 27.0\% | 536,394 | 96.8\% | 531,454 | 95.9\% |

[^0]We have been estimating doses for non-residents who were visiting or staying in Fukushima Prefecture at the time of the accident. (See Table 3)

| Table 3 | Response rates to the Basic Survey |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | (Visitors) |  |  |  | As of 31 December 2014 |  |
| Number of requests | Responses | Response rate | Completed dose estimates | Proportion | Returned results | Proportion |
| a | b | $\mathrm{c}=\mathrm{b} / \mathrm{a}$ | d | $\mathrm{e}=\mathrm{d} / \mathrm{b}$ | f | $\mathrm{g}=\mathrm{f} / \mathrm{b}$ |
| 3,875 | 2,137 | 55.1\% | 1,879 | 87.9\% | 1,869 | 87.5\% |

## 2. Results of Radiation Dose Estimates

Table 4 shows the numbers of completed dose estimates (see Table 2) —excluding the data in the estimation period less than four months-within a range of values.
Radiation doses for a total of 457,859 residents have been estimated to date. The results for 448,948 respondents (excluding radiation workers) suggest that the doses for about $87 \%$ of the respondents in Kempoku area and about 92\% in Kenchu area were $<2 \mathrm{mSv}$. The doses for approximately $88 \%$ of the respondents in Kennan area and more than $99 \%$ of those in Aizu and Minami-aizu areas were $<1$ mSv . Doses for about $78 \%$ of respondents in the Soso area and more than $99 \%$ of respondents in Iwaki were also $<1 \mathrm{mSv}$.

| Table 4 |  |  |  | Table 4 Estimated external radiation doses (preceding and full-scale survey) As of 31 December 2014 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

## 3. Evaluation of the results

The latest effective radiation dose estimates showed similar trends to those observed so far.
Since previous epidemiological studies ${ }^{1}$ indicate no significant health effects at doses $\leq 100 \mathrm{mSv}$, we concluded that radiation doses estimated so far are unlikely to cause adverse effects on health, although this conclusion is based on external radiation doses estimated only for the first four months following the accident.

## Interim Report of Thyroid Ultrasound Examination (Initial Screening)

Reported on 12 February 2015
Revised on 5 June 2015

## 1. Summary

### 1.1 Purpose

One of the health problems caused by the Chernobyl nuclear power plant accident was thyroid cancer in childhood caused by internal exposure to radioactive iodine.
In response to the Tokyo Electric Power Company's (TEPCO's) Fukushima Daiichi nuclear accident, Fukushima Prefecture started a Thyroid Ultrasound Examination program to protect the health of children over their lifetimes. Initial Screening aims to check the baseline condition of participants' thyroid glands.

### 1.2 Group

Residents of Fukushima Prefecture, including visitors, as of 11 March 2011, aged 0-18 years (born between 2 April 1992 and 1 April 2011).

### 1.3 Implementation Period

The Initial Screening started from 9 October 2011 and was planned to end on 31 March 2014, but we continued these examinations until notice of the Full-scale Thyroid Screening program was sent to residents. The data tabulation period lasted to 31 December 2014.

We continue to conduct confirmatory testing on the basis of the primary test results.

### 1.4 Responsible Organizations

Fukushima Prefecture commissioned Fukushima Medical University to conduct the survey in cooperation with institutions inside and outside Fukushima Prefecture.

We started the primary examination from 1 November 2012 outside Fukushima, and 92 institutions have agreed to cooperate as of 31 December 2014.

The confirmatory examination has been conducted in Koriyama and Iwaki in Fukushima Prefecture from July 2013, Aizuwakamatsu from August 2014, and several institutions outside Fukushima Prefecture from November 2013. As of 31 December 2014, 26 institutions conduct the examination.
1.5 Method

## 1.5-1 Primary Examination

We used ultrasonography for examination of the thyroid gland.
Assessments were made by specialists on the basis of the following criteria.
-Diagnostic Criteria: A
Those with A1 and A2 test results are recommended for watchful waiting until they undergo the next screening
starting from April 2014.
(A1) No nodules / cysts
(A2) Nodules $\leq 5.0 \mathrm{~mm}$ or cysts $\leq 20.0 \mathrm{~mm}$
-Diagnostic Criteria: B
Those with B test result are advised to take the Confirmatory Examination.
(B) Nodules $\geq 5.1 \mathrm{~mm}$ or cysts $\geq 20.1 \mathrm{~mm}$

Some A2 test results may be re-classified as B results when clinically indicated.

## -Diagnostic Criteria: C

Those with C test result are advised to take the Confirmatory Examination.
(C) Immediate need for confirmatory examination.

## 1.5-2 Confirmatory Examination

We conduct ultrasonography, blood test, urine test, and fine-needle aspiration cytology (FNAC) if needed for those with B or C test results. Priority is given to those in urgent clinical need.
1.5-3 Flow chart

1.6 Target Municipalities
$\square$ 13 target municipalities for FY 2011
$\square$ 12 target municipalities for FY 2012
34 target municipalities for FY 2013

### 2.1 Results (As of 31 December 2014)

## 2.1-1 Primary Examination

The participation rate as of 31 December 2014 is $81.2 \%$ ( $298,577 / 367,687$ ). (See Appendix 2 and 3)
The results have been returned to $99.5 \%$ of the 297,046 participants. (See Appendix 4 and 5)
Those with A1 or A2 test results were $294,795(99.2 \%)$, B were $2,250(0.8 \%)$, and C was 1 .

Table 1. Screening test coverage as of 31 December 2014

|  | Target Population <br> a | Participants |  | Proportion (\%) <br> c (c/b) | Test results |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Proportion (\%) <br> b (b/a) | Screened outside <br> Fukushima |  | Class |  |  |  |
|  |  |  |  |  | A |  | Requiring confirmatory test |  |
|  |  |  |  |  | A1 d (d/c) | A2 e (e/c) | B f (f/c) | C g (g/c) |
| FY 2011 | 47,768 | 41,810 (87.5) | 2,025 | 41,810 ( 100.0) | 26,373 (63.1) | 15,216 (36.4) | 221 (0.5) | 0 (0.0) |
| FY 2012 | 161,135 | 139,339 (86.5) | 4,266 | 139,317 ( 100.0) | 76,183 (54.7) | 62,146 (44.6) | 987 (0.7) | 1 (0.0) |

| Total | 367,687 | 298,577 (81.2) | 9,402 | 297,046 ( 99.5) | 153,017 (51.5) | 141,778 (47.7) | 2,250 (0.8) | 1 (0.0) |

Table 2. Number and proportion of children with nodules/cysts as of 31 December 2014

|  | Number of confirmed screening results | Number and proportions of children with nodules/cysts |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Nodules |  | Cysts |  |
|  |  | $\begin{gathered} \geq 5.1 \mathrm{~mm} \\ \text { b }(\mathrm{b} / \mathrm{a}) \end{gathered}$ | $\begin{gathered} \leq 5.0 \mathrm{~mm} \\ \mathrm{c}(\mathrm{c} / \mathrm{a}) \end{gathered}$ | $\begin{gathered} \geq 20.1 \mathrm{~mm} \\ \mathrm{~d}(\mathrm{~d} / \mathrm{a}) \end{gathered}$ | $\begin{gathered} \leq 20.0 \mathrm{~mm} \\ \text { e }(\mathrm{e} / \mathrm{a}) \\ \hline \end{gathered}$ |
| FY 2011 | 41,810 | 219 (0.5) | 232 (0.6) | 1 (0.0) | 15,140 (36.2) |
| FY 2012 | 139,317 | 973 (0.7) | 730 (0.5) | 9 (0.0) | 62,259 (44.7) |
| FY 2013 | 115,919 | 1,040 (0.9) | 718 (0.6) | 2 (0.0) | 64,704 (55.8) |
| Total | 297,046 | 2,232 (0.8) | 1,680 (0.6) | 12 (0.0) | 142,103 (47.8) |

Fractions have been rounded and may not total to $100 \%$.
Because of the duplication of the participants, some numbers are not consistent with the previous ones.

## 2.1-2 Confirmatory Examination

The number of participants with B or C test results who required further testing is 2,251 , of whom 2,067 ( $91.8 \%$ ) underwent confirmatory testing. Among them, 2,010 (97.2\%) have completed the tests (Appendix 6).
Of 2,010 children, 681 (33.9\%), specifically 117 with A1 and 564 with A2 results (Table 3), were recommended for watchful waiting.

Of $1,329(66.1 \%)$ needed 6 to 12 months follow-up provided by health insurance, 523 ( $39.4 \%$ ) underwent FNAC.

Table 3. Confirmatory testing coverage and results as of 31 December 2014

|  | Number of children requiring confirmatory test | Participants <br> Proportion (\%) <br> b (b/a) | Confirmatory test coverage (\%) <br> c (c/b) | Confirmed test results |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | Next screening advised |  | Follow-up advised |  |
|  |  |  |  | A1 <br> d (d/c) | $\begin{aligned} & \mathbf{A 2} \\ & \text { e }(\mathrm{e} / \mathrm{c}) \end{aligned}$ | f (f/c) | Cytology <br> $\mathrm{g}(\mathrm{g} / \mathrm{f})$ |
| FY 2011 | 221 | 199 (90.0) | 197 (99.0) | 12 ( 6.1) | 44 (22.3) | 141 (71.6) | 91 ( 64.5) |
| FY 2012 | 988 | 919 (93.0) | 899 ( 97.8) | 54 ( 6.0) | 246 (27.4) | 599 (66.6) | 262 (43.7) |
| FY 2013 | 1,042 | 949 (91.1) | 914 (96.3) | 51 ( 5.6) | 274 (30.0) | 589 (64.4) | 170 (28.9) |
| Total | 2,251 | 2,067 (91.8) | 2,010 (97.2) | 117 (5.8) | 564 (28.1) | 1,329 (66.1) | 523 (39.4) |

Those confirmed within the range of A1 and A2 (including those with other thyroid conditions) were advised to take their next regularly scheduled examination.

Those who require 6- or 12 -month follow-up provided by health insurance and those beyond the specified level of A2 were categorized as "Follow-up advised."

### 2.2 Fine Needle Aspiration Biopsy and Cytology (FNAC)

2.2-1 Aspiration biopsy cytology results as of 31 December 2014

Those who were not diagnosed as suspicious or malignant were recommended for 6- to 12-months follow-up.

Target municipalities in FY 2011

| Suspicious or malignant | $15(15$ surgical cases: 1 of benign thyroid nodules; 13 of papillary thyroid <br> carcinoma; <br> 1 poorly differentiated thyroid carcinoma) |
| :--- | :--- |
| Male to female ratio | $5: 10$ |
| Mean age (SD, min-max) | $17.3(2.0,13-20)$ <br> $15.7(1.9,11-18)$ at the time of the disaster |
| Mean tumor size | $14.1 \mathrm{~mm}(6.6 \mathrm{~mm}, 6.0-33.0 \mathrm{~mm})$ |

Target municipalities in FY 2012

| Suspicious or malignant | $56(50$ surgical cases: 49 of papillary thyroid carcinoma ; <br> 1 poorly differentiated thyroid carcinoma) |
| :--- | :--- |
| Male to female ratio | $21: 35$ |
| Mean age (SD, min-max) | $17.2(2.7,8-21)$ <br>  <br>  <br> Mean tumor size |

Target municipalities in FY 2013

| Suspicious or malignant | $39(22$ surgical cases: 21 of papillary thyroid carcinoma; <br> 1 poorly differentiated thyroid carcinoma) |
| :--- | :--- |
| Male to female ratio | $12: 27$ |
| Mean age (SD, min-max) | $17.2(3.0,11-21)$ |
|  | $14.4(2.8,8-18)$ at the time of the disaster |
| Mean tumor size | $13.3 \mathrm{~mm}(6.9 \mathrm{~mm}, 5.1-35.9 \mathrm{~mm})$ |

Total for cases FY 2011 - FY 2013

| Suspicious or malignant | $110(87$ surgical cases: 1 of benign thyroid nodules; 83 of papillary thyroid <br> carcinoma; <br> 3 poorly differentiated thyroid carcinoma ) |
| :--- | :--- |
| Male to female ratio | $38: 72$ |
| Mean age $(\mathrm{SD}$, min-max) | $17.2(2.7,8-21)$ |
|  | $14.8(2.6,6-18)$ at the time of the disaster |
| Mean tumor size | $14.0 \mathrm{~mm}(7.3 \mathrm{~mm}, 5.1-40.5 \mathrm{~mm})$ |

2.2-2 Suspicious or malignant cases on FNAC by age and sex

Fig. 3 Age as of 11 March 2011

Fig. 4 Age as the date of confirmatory examination
2.2-3 Suspicious or malignant cases on FNAC by estimated radiation dose

Sixty-two of the 110 cases ( $56.4 \%$ ) participated in the Basic Survey (radiation dose estimates) and 59 of them, including 5 with less than four months' data, have received the results. Among those, 41 ( $69.5 \%$ ) had estimated radiation exposure dose below 1 mSv , and the highest effective dose was 2.2 mSv .

Table 5. Number of suspicious or malignant cases by age and sex
As of 31 December 2014

| Effective dose (mSv) | Sex | Age at the time of disaster |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 0-5 | 6-10 | 11-15 | 16-18 | Total |
| $<0.5$ | Male | 0 | 0 | 2 | 5(1) | 7(1) |
|  | Female | 0 | 4(1) | 6 | 10(2) | 20(3) |
| 0.5-0.9 | Male | 0 | 0 | 4(1) | 2 | 6(1) |
|  | Female | 0 | 1 | 1 | 6 | 8 |
| 1.0-1.4 | Male | 0 | 0 | 2 | 2 | 4 |
|  | Female | 0 | 0 | 5 | 1 | 6 |
| 1.5-1.9 | Male | 0 | 0 | 1 | 0 | 1 |
|  | Female | 0 | 0 | 4 | 2 | 6 |
| 2.0-2.4 | Male | 0 | 0 | 1 | 0 | 1 |
|  | Female | 0 | 0 | 0 | 0 | 0 |
| Total | Male | 0 | 0 | 10(1) | 9(1) | 19(2) |
|  | Female | 0 | 5(1) | 16 | 19(2) | 40(3) |

Numbers inside the brackets are estimates for participants with less than four months' data.

Fig. 5 Effective dose of the respondents

## 3. Primary and confirmatory test results by municipality (Interim report)

In order to compare the results by municipality, we divided the area into three regions, Hamadori, Nakadori, and Aizu. Hamadori and Nakadori are divided into 13 municipalities in the nationally designated evacuation zones and otherwise.

The below is the interim report since the results of the Confirmatory Examination in Aizu area are not fully available yet.

Table 9. Proportion of B or C test results, and suspicious or malignant (Interim report)
As of 31 December 2014

10) Excluding duplicates and unconfirmed results.
11) Excluding number of unconfirmed test results.
12) Number of those who underwent FNAC including A1 and A2 test results among participants of Confirmatory Examination.
13) Excluding one suspected case found benign by aspiration biopsy cytology.
14) Tamura, Minami-soma, Date, Kawamata, Hirono, Naraha, Tomioka, Kawauchi, Okuma, Futaba, Namie, Katsurao, Iitate
15) Fukushima, Koriyama, Shirakawa, Sukagawa, Nihonmatsu, Motomiya, Kori, Kunimi, Otama, Kagamiishi, Tenei, Nishigo, Izumizaki, Nakajima, Yabuki, Tanagura, Yamatsuri, Hanawa, Samegawa, Ishikawa, Tamakawa, Hirata, Asakawa, Furudono, Miharu, Ono
16) Iwaki, Soma, Shinchi
17) Aizuwakamatsu, Kitakata, Shimogo, Hinoemata, Tadami, Minami-aizu, Kitashiobara, Nishiaizu, Bandai, Inawashiro, Aizubange,

Yugawa, Yanaizu, Mishima, Kaneyama, Showa, Aizumisato

## Summary

Among the 297,046 participants of Primary Examination excluding duplicates and unconfirmed test results, proportion of B or C test results increased in all areas, and was highest in Aizu followed by Hamadori, Nakadori, and 13 municipalities of the nationally designated evacuation zones. The proportion of suspicious or malignant was almost the same among 13 municipalities in the nationally designated evacuation zones, Nakadori, and Hamadori, but lower in Aizu since the proportion of those completed the Confirmatory Examination is lower.

FY 2011 is from 1 April 2011 through 31 March 2012.
FY 2012 is from 1 April 2012 through 31 March 2013.
FY 2013 is from 1 April 2013 through 31 March 2014.

## Appendix 3

Thyroid Ultrasound Examination (TUE) coverage by prefecture

As of 30 November 2014

| Prefecture | Number of <br> test venues | Participants |
| :---: | ---: | ---: |
| Hokkaido | 4 | $\mathbf{3 3 4}$ |
| Aomori | 1 | $\mathbf{1 6 2}$ |
| Iwate | 3 | $\mathbf{1 8 7}$ |
| Miyagi | 2 | $\mathbf{1 , 5 2 2}$ |
| Akita | 1 | $\mathbf{2 0 8}$ |
| Yamagata | 3 | $\mathbf{4 5 5}$ |
| Ibaraki | 4 | $\mathbf{4 4 6}$ |
| Tochigi | 5 | $\mathbf{4 5 2}$ |
| Gunma | 1 | $\mathbf{1 8 5}$ |
| Saitama | 1 | $\mathbf{2 4 9}$ |
| Chiba | 3 | $\mathbf{2 8 2}$ |
| Tōkyō | 12 | $\mathbf{1 , 7 6 8}$ |
| Kanagawa | 4 | $\mathbf{7 5 0}$ |
| Niigata | 1 | $\mathbf{6 1 6}$ |
| Toyama | 1 | $\mathbf{3 4}$ |
| Ishikawa | 1 | $\mathbf{4 5}$ |

| Prefecture | Number of <br> test venues | Participants |
| :---: | ---: | ---: |
| Fukui | 1 | $\mathbf{2 2}$ |
| Yamanashi | 1 | $\mathbf{8 2}$ |
| Nagano | 2 | $\mathbf{1 3 2}$ |
| Gifu | 1 | $\mathbf{4 3}$ |
| Shizuoka | 2 | $\mathbf{1 1 0}$ |
| Aichi | 3 | $\mathbf{1 7 9}$ |
| Mie | 1 | $\mathbf{3 8}$ |
| Shiga | 1 | $\mathbf{2 0}$ |
| Kyōto | 3 | $\mathbf{9 7}$ |
| Ōsaka | 6 | $\mathbf{2 1 0}$ |
| Hyōgo | 1 | $\mathbf{1 3 5}$ |
| Nara | 1 | $\mathbf{2 5}$ |
| Wakayama | 1 | $\mathbf{1 3}$ |
| Tottori | 1 | $\mathbf{1 5}$ |
| Shimane | 1 | $\mathbf{1 3}$ |
| Okayama | 3 | $\mathbf{8 0}$ |

| Prefecture | Number of <br> test venues | Participants |
| :---: | ---: | ---: |
| Hiroshima | 1 | $\mathbf{3 7}$ |
| Yamaguchi | 1 | $\mathbf{2 4}$ |
| Tokushima | 1 | $\mathbf{1 0}$ |
| Kagawa | 1 | $\mathbf{2 9}$ |
| Ehime | 1 | $\mathbf{2 3}$ |
| Kōchi | 1 | $\mathbf{1 4}$ |
| Fukuoka | 2 | $\mathbf{8 1}$ |
| Saga | 1 | $\mathbf{7}$ |
| Nagasaki | 2 | $\mathbf{2 5}$ |
| Kumamoto | 1 | $\mathbf{2 5}$ |
| Ōita | 1 | $\mathbf{3 5}$ |
| Miyazaki | 1 | $\mathbf{3 5}$ |
| Kagoshima | 1 | $\mathbf{3 1}$ |
| Okinawa | 1 | $\mathbf{1 1 7}$ |
|  |  |  |
| Total | 92 | $\mathbf{9 , 4 0 2}$ |

Participants underwent testing at venues outside Fukushima carried out either by Fukushima Medical University staff (twice in Niigata and Kanagawa respectively, and three times in Yamagata) or by local specialists.

## Appendix 4

Thyroid Ultrasound Examination (TUE) results by municipality
Primary test results in FY 2011 (13 municipalities in the nationally designated zones)

Fractions are rounded and may not total to $100 \%$.
Because of the duplication of the participants, some numbers are not consistent with the previous ones.
Fractions have been rounded and may not total to $100 \%$. Ages are at the time of the disaster.
While some participants who underwent the test at their schools had been categorized according to the municipalities of their schools in the previous survey, they were categorized into the municipalities they belonged at the time of the disaster.

h) Excluding participants who have not receive the test results.

Fractions have been rounded and may not total to $100 \%$.
Ages are at the time of the disaster.
While some participants who underwent the test at their schools had been categorized according to the municipalities of their schools in the previous survey, they were categorized into the municipalities they belonged at the time of the disaster.

## Thyroid Ultrasound Examination (Full-scale Thyroid Screening Program)

Reported on 12 February 2015

## 1. Summary

### 1.1 Purpose

In order to protect the long-term health of children, we are now engaged in a Full-scale Thyroid Screening Program following a preliminary Initial Screening period.

### 1.2 Group

Residents of Fukushima Prefecture including visitors who were born between 2 April 1992 and 1 April 2011 (Initial Screening), and those who were born between 2 April 2011 and 1 April 2012.

### 1.3 Implementation Period

The full-scale screening starts from 2 April 2014 and lasts for two years.
We repeat the examination every two years until the age of 20, and every five years afterwards.

### 1.4 Responsible Organizations

Fukushima Prefecture commissioned Fukushima Medical University to conduct the survey in cooperation with institutions inside and outside Fukushima.

As of 31 December 2014, we provide the Primary Examination at 11 medical institutions under contract, and try to have more institutions inside Fukushima Prefecture.

Ninety-two institutions outside Fukushima Prefecture have agreed to cooperate as of 31 December 2014.
The confirmatory examination has been conducted in Koriyama and Iwaki in Fukushima Prefecture from July 2013, Aizuwakamatsu from August 2014, and several institutions outside Fukushima Prefecture from November 2013. There are 26 institutions that provide the examination as of 31 December 2014.

### 1.5 Method

## 1.5-1 Primary Examination

We used ultrasonography for examination of the thyroid gland.
Assessments were made by specialists on the basis of the following criteria.
-Diagnostic Criteria: A
Those with A1 and A2 test results are recommended for watchful waiting until they undergo the next screening starting from April 2016.
(A1) No nodules / cysts
(A2) Nodules $\leq 5.0 \mathrm{~mm}$ or cysts $\leq 20.0 \mathrm{~mm}$
-Diagnostic Criteria: B
Those with B test result are advised to take the Confirmatory Examination.
(B) Nodules $\geq 5.1 \mathrm{~mm}$ or cysts $\geq 20.1 \mathrm{~mm}$

Some A2 test results may be re-classified as B results when clinically indicated.
-Diagnostic Criteria: C
Those with C test result are advised to take the Confirmatory Examination.
(C) Immediate need for confirmatory examination.

## 1.5-2 Confirmatory Examination

We conduct ultrasonography, blood test, urine test, and fine-needle aspiration cytology (FNAC) if needed for those with B or C test results. Priority is given to those in urgent clinical need.
1.5-3 Flow chart

### 1.6 Target Municipalities

$\square$

## 2. Results (As of 31 December 2014)

## 2.1-1 Primary Examination

The Primary Examination started from 2 April 2014, and the participation rate as of 31 December 2014 is $48.6 \%$ $(106,068)$ out of around 220,000 from 25 municipalities. (See Appendix 1 and 2)
The results have been returned to $71.0 \%(75,311)$ of the participants. (See Appendix 3)
Those with A1 or A2 test results were $74,700(99.2 \%)$, B were $611(0.8 \%)$, and C was 0 .

Table 1. Screening test coverage as of 31 December 2014

|  | Target Population <br> a | Participants |  |  | Proportion (\%) <br> c (c/b) | Test results |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Proportion (\%) |  | $\begin{array}{\|c} \text { Screened } \\ \text { outside } \\ \text { Fukushima } \end{array}$ |  | Class |  |  |  |
|  |  |  |  | A |  | Requiring confirmatory test |  |
|  |  | b (b/a) |  |  |  | A1 d (d/c) | A2 e (e/c) | B f (f/c) | Cg (g/c) |
| FY 2014 | 216,203 | 103,874 | (48.0) |  | 5,360 | 74,847 ( 72.1) | 31,622 (42.2) | 42,617 (56.9) | 608 (0.8) | 0 (0.0) |
| FY 2015 | 2,194 | 2,194 | (100.0) | 4 | 464 ( 21.1) | 167 (36.0) | 294 (63.4) | 3 (0.6) | 0 (0.0) |
| Total | 218,397 | 106,068 | (48.6) | 5,364 | 75,311 (71.0) | 31,789 (42.2) | 42,911 (57.0) | 611 (0.8) | 0 (0.0) |

Table 2. Number and proportion of children with nodules/cysts as of 31 December 2014

|  | Number of confirmed screening results <br> a | Number and proportions of children with nodules/cysts |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Nodules |  | Cysts |  |
|  |  | $\begin{gathered} \geq 5.1 \mathrm{~mm} \\ \text { b(b/a) } \end{gathered}$ | $\begin{gathered} \leq 5.0 \mathrm{~mm} \\ \mathrm{c}(\mathrm{c} / \mathrm{a}) \end{gathered}$ | $\underset{\mathrm{d}(\mathrm{~d} / \mathrm{a})}{\geq 20.1 \mathrm{~mm}}$ | $\underset{e(e / a)}{\leq 20.0 \mathrm{~mm}}$ |
| FY 2014 | 74,847 | 606 (0.8) | 472 (0.6) | 1 (0.0) | 42,813 (57.2) |
| FY 2015 | 464 | 3 (0.6) | 3 (0.6) | 0 (0.0) | 293 (63.1) |
| Total | 75,311 | 609 (0.8) | 475 (0.6) | 1 (0.0) | 43,106 (57.2) |

Fractions have been rounded and may not total to $100 \%$.

## 2.1-2 Comparison with the Initial Screening

Among 74,700 participants who were diagnosed as A1 or A2, 69,948 ( $93.6 \%$ ) had A1 or A2 results from the Initial Screening. Among 611 participants who were diagnosed as B, 441 (72.2\%) had A1 or A2 results from the Initial Screening.

Table 3. Changes in the results of Initial Screening and Full-scale Thyroid Screening Program as of 31 December 2014

|  |  |  | Number of confirmed test results of Full-scale Thyroid Screening Program (\%) | Results of the Initial Screening |  |  |  |  |

## 2.1-3 Confirmatory Examination

The number of children who required further testing (started in June 2014) is 611, of whom 377 (61.7\%) underwent confirmatory testing. Among them, 262 (69.5\%) have completed the tests. (See Appendix 4) Of 262 participants, 94 (35.9\%) with confirmed test results of Confirmatory Examination have been confirmed within the range of A1 and A2, and were advised to take their next regularly scheduled examination.
Those who require 6-12-month follow-up provided by health insurance were 168 (64.1\%).

Table 4. Confirmatory testing coverage and results as of 31 December 2014

|  | Number of <br> children <br> requiring <br> confirmatory <br> test <br> a | Participants <br> Proportion (\%) <br> b (b/a) | Confirmatory test coverage (\%) <br> c (c/b) | Confirmed test results |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | Next screening advised |  | Follow-up advised |  |
|  |  |  |  | $\begin{array}{r} \mathrm{A} 1 \\ \mathrm{~d}(\mathrm{~d} / \mathrm{c}) \end{array}$ | $\begin{array}{r} \mathrm{A} 2 \\ \mathrm{e}(\mathrm{e} / \mathrm{c}) \\ \hline \end{array}$ | f (f/c) | Cytology $\mathrm{g}(\mathrm{~g} / \mathrm{f})$ |
| FY 2014 | 608 | 375 (61.7) | 261 ( 69.6) | 16 (6.1) | 77 (29.5) | 168 (64.4) | 22 (13.1) |
| FY 2015 | 3 | 2 (66.7) | 1 ( 50.0) | 0 (0.0) | 1 (100.0) | 0 (0.0) | 0 (0.0) |
| Total | 611 | 377 (61.7) | 262 ( 69.5) | 16 (6.1) | 78 (29.8) | 168 (64.1) | 22 (13.1) |

Priority was given to those in urgent clinical need.
Those confirmed within the range of A1 and A2 (including those with other thyroid conditions) were advised to take their next regularly scheduled examination.

Those who require 6- or 12-month follow-up provided by health insurance and those beyond the specified level of A2 were categorized as "Follow-up advised."

### 2.2 Fine Needle Aspiration Biopsy and Cytology (FNAC)

## 2.2-1 Aspiration biopsy cytology results

Table 5. Target municipalities in FY 2014

| Suspicious or malignant | 8 (1 surgical case: 1 of papillary thyroid carcinoma) |
| :--- | :--- |
| Male to female ratio | $4: 4$ |
| Mean age (SD, min-max) | $15.6(3.4,10-20)$ |
|  | $12.1(3.4,6-17)$ at the time of the disaster |
| Mean tumor size | $10.2 \mathrm{~mm}(3.9 \mathrm{~mm}, 6.0-17.3 \mathrm{~mm})$ |

2.2-2 Suspicious or malignant cases on FNAC by age and sex

Fig. 3 Age as of 11 March 2011

Fig. 4 Age as the date of confirmatory examination

## 2.2-3 Suspicious or malignant cases on FNAC by estimated radiation dose

Six of the 8 cases $(75.0 \%$ ) participated in the Basic Survey (radiation dose estimates) and have received the results. Among those, 2 had estimated radiation exposure dose below 1 mSv , and the highest effective dose was 2.1 mSv .

Table 6. Estimated external radiation doses for participants of Basic Survey As of 31 December 2014

| Effective dose <br> $(\mathrm{mSv})$ | Sex | Age at the time of disaster |  |  |  |  |
| :---: | :---: | ---: | ---: | ---: | ---: | ---: |
|  |  | $0-5$ | $6-10$ | $11-15$ | $16-18$ | Total |

| 8 suspicious or malignant | $1.2 \pm 0.1(0.0 \%)$ | $3.6 \pm 0.5(0.0 \%)$ | $1.6 \pm 1.2(0.0 \%)$ | $36.7 \pm 50.5(25.0 \%)$ | $-(12.5 \%)$ | $-(12.5 \%)$ |
| Other 253 | $1.2 \pm 0.2(7.5 \%)$ | $3.6 \pm 0.5(6.3 \%)$ | $1.4 \pm 1.0(9.1 \%)$ | $22.8 \pm 45.4(11.5 \%)$ | $-(10.7 \%)$ | $-(11.1 \%)$ |

Table 8. Urinary iodine ( $\mu \mathrm{g} /$ day)

|  | Minimum | 25th percentile | Median | 75th percentile | Maximum |
| :---: | ---: | ---: | ---: | ---: | ---: |
| 8 suspicious or malignant | 61 | 126.25 | 165.5 | 386 | 690 |
| Other 251 | 38 | 120 | 195 | 369 | 11,800 |

1) FT4: Free Thyroxine; higher among patients with Graves' disease and lower with Hashimoto's disease.
2) FT3: Free Triiodothyronine; higher among patients with Graves' disease and lower with Hashimoto's disease.
3) TSH: Thyroid Stimulating Hormone; higher among patients with Hashimoto's disease and lower with Graves' disease.
4) Tg : Thyroglobulin; higher when thyroid tissue is destroyed or when thyroid cancer produces thyroglobulin.
5) TgAb: Anti-Thyroglobulin Antibody; higher among patients with Hashimoto's disease and Graves' disease.
6) TPOAb: Anti-Thyroid Peroxidase Antibody; higher among patients with Hashimoto's disease or Graves' disease.
7) Reference range differs according to age.

## 2.2-5 Confirmatory test results by municipality as of 31 December 2014

The proportion of suspicious or malignant is $0.01 \%$ in FY 2014 target municipalities ( 13 municipalities in the nationally designated evacuation zones and 12 towns of the Kempoku area), $0.00 \%$ in FY 2015 target municipalities ( 34 towns of the Iwaki, Kennan, and Aizu areas).

Table 9.
Confirmatory test results in FY 2014

|  | Number of children screened | Number who required confirmatory test | Proportion who required confirmatory test (\%) | Number who underwent confirmatory test | Suspicious or malignant cases | Proportion of suspicious or malignant cases (\%) |

| :--- | :--- |

1) Number of participants. 2) Number of participants in the age group/Number of participants.
2) Number of participants who underwent the test outside Fukushima.

Fractions have been rounded and may not total to $100 \%$. Ages are at the time when the participants underwent the testing.
Because of the duplication of the participants, some numbers are not consistent with the previous ones.

## Appendix 2

Thyroid Ultrasound Examination (TUE) coverage by prefecture
As of 30 November 2014

| Prefecture | Number of <br> test venues | Participants |
| :---: | ---: | ---: |
| Hokkaido | 4 | $\mathbf{1 0 0}$ |
| Aomori | 1 | $\mathbf{6 2}$ |
| Iwate | 3 | $\mathbf{1 2 3}$ |
| Miyagi | 2 | $\mathbf{1 , 2 5 9}$ |
| Akita | 1 | $\mathbf{8 9}$ |
| Yamagata | 3 | $\mathbf{4 5 7}$ |
| Ibaraki | 4 | $\mathbf{3 3 3}$ |
| Tochigi | 5 | $\mathbf{3 3 6}$ |
| Gunma | 1 | $\mathbf{9 4}$ |
| Saitama | 1 | $\mathbf{1 5 4}$ |
| Chiba | 3 | $\mathbf{2 4 3}$ |
| Tōkyō | 12 | $\mathbf{6 6 0}$ |
| Kanagawa | 4 | $\mathbf{3 7 4}$ |
| Niigata | 1 | $\mathbf{4 9 0}$ |
| Toyama | 1 | $\mathbf{5}$ |
| Ishikawa | 1 | $\mathbf{2 9}$ |

| Prefecture | Number of <br> test venues | Participants |
| :---: | ---: | ---: |
| Fukui | 1 | $\mathbf{8}$ |
| Yamanashi | 1 | $\mathbf{7 6}$ |
| Nagano | 2 | $\mathbf{3 4}$ |
| Gifu | 1 | $\mathbf{1 5}$ |
| Shizuoka | 2 | $\mathbf{6 1}$ |
| Aichi | 3 | $\mathbf{6 6}$ |
| Mie | 1 | $\mathbf{1 1}$ |
| Shiga | 1 | $\mathbf{2}$ |
| Kyōto | 3 | $\mathbf{2 0}$ |
| Ōsaka | 6 | $\mathbf{5 1}$ |
| Hyōgo | 1 | $\mathbf{3 8}$ |
| Nara | 1 | $\mathbf{1 0}$ |
| Wakayama | 1 | $\mathbf{2}$ |
| Tottori | 1 | $\mathbf{7}$ |
| Shimane | 1 | $\mathbf{3}$ |
| Okayama | 3 | $\mathbf{1 9}$ |

| Prefecture | Number of <br> test venues | Participants |
| :---: | ---: | ---: |
| Hiroshima | 1 | $\mathbf{4}$ |
| Yamaguchi | 1 | $\mathbf{9}$ |
| Tokushima | 1 | $\mathbf{4}$ |
| Kagawa | 1 | $\mathbf{7}$ |
| Ehime | 1 | $\mathbf{1}$ |
| Kōchi | 1 | $\mathbf{3}$ |
| Fukuoka | 2 | $\mathbf{2 8}$ |
| Saga | 1 | $\mathbf{1 0}$ |
| Nagasaki | 2 | $\mathbf{1 0}$ |
| Kumamoto | 1 | $\mathbf{2}$ |
| Ōita | 1 | $\mathbf{1 7}$ |
| Miyazaki | 1 | $\mathbf{1 5}$ |
| Kagoshima | 1 | $\mathbf{1 2}$ |
| Okinawa | 1 | $\mathbf{1 1}$ |
| Total | 92 | $\mathbf{5 , 3 6 4}$ |

Participants underwent testing at venues outside Fukushima carried out either by Fukushima Medical University staff (once in Niigata,
Kanagawa, and Yamagata respectively) or by local specialists.

## Progress Report of the Comprehensive Health Check

Reported on 12 February 2015

## 1. Progress Report of FY 2014

Group: 214,211 individuals
(25,883 individuals aged 15 and younger, and 188,328 individuals aged 16 and older)
As of 31 December 2014

* Iitate (from 16 May), Tamura (from 28 May), Katsurao (7, 8 Jun), Kawamata (from 19 Jun), Minami-soma (from 7 Jul), Hirono (from 15 Jul), Kawauchi (from 1 Sep), Futaba (from 6 Sep), Namie (from 20 Sep), Naraha (from 26 Sep ), Tomioka (from 29 Sep ), Okuma (from 20 Oct)

## 【Individuals living in Fukushima Prefecture】

For those aged 15 years and younger，we conducted the Comprehensive Health Check from July to December 2014，for about 6 months as was the case in FY 2013，with the cooperation of 101 medical institutions．The number of participants is 7,417 （preliminary data）．
For eligible residents aged 16 years and older in 12 municipalities except Date city，items were added to specific health exams held by municipalities as was the case in FY 2013．The number of participants aged 16 and older is 25,905 （preliminary data）．For those who missed the chance，we started the Comprehensive Health Check in group health exams and in individual health exams at 504 medical institutions from January 2015.

【Individuals living outside Fukushima Prefecture】
We sent out notice for the Comprehensive Health Check held at medical institutions outside Fukushima Prefecture starting in August．The number of participants at this point is 948 aged 15 and younger and 677 aged 16 and older．

[^4]【Results】

- Height

Comparing boys' height in FY 2013 with FY 2011, no specific trend was evident for children aged 10 months to 5 years. However, the heights increased among girls aged 10 months to 5 years except those aged 1 year 8-9 months compared to FY 2011.

Comparing the height of primary school boys in FY 2013 with FY 2011, children were taller except those aged 10 years. Comparing it with national averages in FY 2013, children aged 6-11 years were taller.
Comparing the height of middle school boys in FY 2013 with FY 2011, children aged 12 and 14 years were taller, and children aged 13 years were shorter. Comparing it with national averages in FY 2013, children aged 12-14 years were taller.
Comparing the height of boys aged 15 years in FY 2013 with FY 2011 and national averages in FY 2013, those aged 15 years were shorter.

Comparing the height of primary school girls in FY 2013 with FY 2011 and national averages in FY 2013, children were taller except those aged 8 years who were shorter.
Comparing the height of middle school girls in FY 2013 with FY 2011 and national averages in FY 2013, children aged 12 and 14 years were shorter, and children aged 13 years were taller.

Comparing the height of girls aged 15 years in FY 2013 with FY 2011 and national averages in FY 2013, those aged 15 years were taller.

## $\checkmark$ Weight

Comparing children's weight in FY 2013 with FY 2011, most boys and girls aged 10 months to 5 years weigh less. However, boys and girls aged 5 years and older, and girls aged 1 year 4-8 months weigh more.

Comparing the weight of primary school boys in FY 2013 with FY 2011, there was little difference for children aged 6-7 years. Children aged 8-10 years weigh less but those aged 11 years weigh more. Comparing it with national averages in FY 2013, children aged 6-11 years weigh more, and the older the children are, the greater the gap.
Comparing the weight of middle school boys in FY 2013 with FY 2011, children aged 12-13 years weigh less, and children aged 14 years weigh more. Comparing it with national averages in FY 2013, children aged 12-14 years weigh more.

Comparing the weight of boys aged 15 years in FY 2013 with FY 2011, those aged 15 years weigh less but weigh more compared to national averages in FY 2013.

Comparing the weight of primary school girls in FY 2013 with FY 2011, children aged 6-10 years weigh less but those aged 11 years weigh more. Comparing it with national averages in FY 2013, children aged 6-11 years weigh more, and the older the children are, the greater the gap.

Comparing the weight of middle school girls in FY 2013 with FY 2011, children aged 12-14 years weigh less. Comparing it with national averages in FY 2013, those aged 12 and 13 years weigh more and those aged 14 years weigh less.

Comparing the weight of girls aged 15 years in FY 2013 with FY 2011 and national averages in FY 2013, those aged 15 years weigh less.

## 【Summary】

Comparing the FY 2013 survey with FY 2011, most children of target municipalities including the nationally designated evacuation zones tend to be taller and weigh less possibly due to better lifestyle. Compared it with the national median, most children were taller and weigh more, and the older the children are, the greater the gap especially in weight. (Girls aged 15 years were taller and weighed less.)

## Progress Report of Mental Health and Lifestyle Survey

Reported on 12 February 2015

## 1. Progress Report of Mental Health and Lifestyle Survey for FY 2014

### 1.1 Purpose

Results of the Mental Health and Lifestyle Survey for FY 2011-2013 show that ongoing care is needed by understanding the residents' mental health and lifestyle changes. We will continue to conduct the survey using survey forms.
For the survey respondents requiring support, we provide effective and efficient support by offering over-the-phone or other support services, as well as by promptly sharing participants' information with municipal governments and the Fukushima Center for Disaster Mental Health.

### 1.2 Group

Residents of Evacuation Zones (when the FY 2011 survey was sent) as of 15 January 2015
(212,738 people)
[Evacuation Zones]
Hirono, Naraha, Tomioka, Kawauchi, Okuma, Futaba, Namie, Katsurao, Iitate Minami-soma, Tamura, Kawamata, part of Date (the area with a specific spot recommended for evacuation)

### 1.3 Survey Methods

We plan to send survey forms (to be filled out by self or parent/guardian) to the participants from early February 2015.
1.3-1 Classification

| Category | Age Criteria | Method |
| :---: | :--- | :--- |
| Adults | Born before 1 April 1999 | Self-administered |
| Middle <br> school age | Born between 2 April 1999 and 1 April 2002 | Partially <br> self-administered |
| Primary <br> school age | Born between 2 April 2002 and 1 April 2008 | Completed by parents |
| 4-6 years | Born between 2 April 2008 and 1 April 2011 | Completed by parents |
| 0-3 years | Born between 2 April 2011 and 1 April 2014 | Completed by parents |

## 1.3-2 Survey Items

- Mental and physical health
- Lifestyle (diet, sleep, smoking, alcohol and exercise)
- Activities
- Living environment and relationships (for adults)

## 1.3-3 Support after the Survey

- Doctors and other professionals at Fukushima Medical University (FMU) will evaluate and analyse the survey responses. The Mental Health Support Team consisting of clinical psychiatrists, public health nurses and other professionals will provide phone or other forms of support to respondents determined to require counseling or support for mental health or lifestyle problems.
- Participants determined to require examination by a doctor will be referred to a registered physician (*see next section) at a medical facility in the Fukushima Prefecture. Those requiring continued support will be connected to the municipal government of the area to which they evacuated and the Fukushima Center for Disaster Mental Health, where their support needs will be reviewed and met.
- At the registered doctor's discretion, participants determined to require further professional mental health care will be handled by FMU and cooperating institutions in the normal course of treatment. Specifically, children will be handled at the Children's Mental Health Treatment Center and all others will be handled in the Department of Psychosomatic Medicine.
- The Mental Health Support Team will offer information and advice about radiation to participants, and those participants determined to require assistance from a particular relevant specialist will be handled by the Radiation Health Consultation Team comprised of professors from FMU. If an individual inquiring about the health effects of radiation or some other issue needs to have a medical examination, specialist doctors and other professionals will determine the course of action.

## 2. Registered Physicians

Registered physicians are psychiatrists or pediatricians who provide services to participants determined to require healthcare services based on the Mental Health and Lifestyle Survey.
To be eligible for registration, a psychiatrist or a pediatrician needs to attend the accredited workshops held by FMU. The number of registrants is 143 from 83 medical institutions as of 31 December 2014.

## Result of Mental Health and Lifestyle Survey for FY 2013

## 1. Purpose

The Great East Japan Earthquake on 11 March 2011 and the following accident at the Fukushima Daiichi Nuclear Power Plant brought the residents of Fukushima Prefecture psychological distress or post-traumatic stress disorder (PTSD) caused by anxiety, evacuation, loss of property, and fearful experiences. The survey started in FY 2011 to understand the residents' mental health and lifestyle, and provide them with appropriate care.

As mental health services should involve medium- and long-term support, we will continue to conduct the survey to convey a strong message of ongoing care and support to the participants. Additionally, further support is needed based on understanding the changes in their situation that have occurred as well as the causes of these changes.
The survey responses were analyzed by doctors and other professionals at Fukushima Medical University (FMU). A Mental Health Support Team consisting of clinical psychologists, public health nurses and others performed consultations to those determined to require counseling or support for mental health or lifestyle problems.

## 2. Methods

### 2.1. Support Group

Respondents to the Mental Health and Lifestyle Survey for FY 2013, who are residents of nationally designated evacuation areas born on or before 1 April 2013, and apply to the following selection criteria.

We have five types of surveys according to age.
Age 0-3 years : Participants born between April 2, 2010 and April 1, 2013.
Age 4-6 years : Participants born between April 2, 2007 and April 1, 2010.
Primary School : Participants born between April 2, 2001 and April 1, 2007.
Middle School : Participants born between April 2, 1998 and April 1, 2001.
Adults : Participants born on or before April 1, 1998.

### 2.2 Criteria for Support

We provided telephone counseling or support by sending written materials according to the urgency and severity. In this survey, 'children' refers to the participants of middle school age and below.
Criteria for support are based on A) Scale scores and B) Items other than scales.

## 2.2-1 Telephone Counseling

Respondents who required support (A):

- Children with SDQ (Strength and Difficulties Questionnaire) score $\geq 20$, adults with K6 (general mental health conditions) score $\geq 13$ and PCL (trauma response) score $\geq 50$, or adults with K6 score $\geq 17$ regardless of their PCL score.

Respondents who required support (B):

- Children and adults identified based on the content of free-answer questions and in urgent need of support.
- Adults with a previous history of hypertension or diabetes who have not received treatment with a BMI $\geq 27.5$ (calculated from weight and height written in the survey) and a weight gain of $\geq 3 \mathrm{~kg}$ after the disaster, or those who consume, on average, $\geq 540 \mathrm{ml}$ alcoholic drinks per day.
- Adults with a history of mental disorders who are not currently visiting a clinic.

## 2.2-2 Written Materials

Respondents who required support (A):

- Children with SDQ score $\geq 16$ (criterion in initial screening) and adults with K 6 score $\geq 13$ or PCL score $\geq 44$ (criteria in initial screening), who did not meet the criteria for telephone counseling.

Respondents who required support (B):

- Children and adults identified based on the content of free-answer questions and not in urgent need of support.
- Adults who neither meet the above criteria nor receive medical treatment with sleep disorder, depression and decreased activity.
- Adults with CAGE (method of screening for alcoholism) score $\geq 2$ out of 4 .

We sent the respondents who required written support materials a letter with a special phone number for support, and a return postcard asking their desire for telephone support. Telephone support was provided for those who indicated their desire for support, or those who were determined to require support based on the reply content.

### 2.3. Categories of Results and Continued Support

The results of the telephone counseling were categorized into four groups: Follow-up 1, 2, 3, and 'Declined support.' The participants requiring continued support were given follow-up with telephone counseling, or connected to municipal governments and the Fukushima Center for Disaster Mental Health. Participants determined to require examination by a doctor were referred to a registered physician, or informed of the medical institutions and services they needed. When necessary, we contacted the participants' physicians to share information.

## 2.3-1 Categories of Results

Follow-up 1 : Participants confirmed to be improving or self-managing their problems.
Follow-up 2 : Participants not recovering from health problems, the emotional aftermath, adjustment problems, etc.

Follow-up 3 : Participants whose status could not be confirmed.
Declined support : Participants who clearly conveyed that they did not want support.

## 2.3-2 Continued Support

| Follow-up | : Participants requiring continued telephone counseling. |
| :---: | :---: |
| Municipal government | : Participants required to be connected to municipal government. |
| Referral | : Participants referred to registered doctors. |
| Sent list of registered doctors within Fukushima Prefecture: |  |
|  | Participants sent information of registered doctors. |
| Sent information of medical institutions outside the prefecture: |  |
|  | Participants sent information of institutions outside the prefecture for support. |
| Sharing information | : Participants' information was shared with their home doctors. |
| Provided information | : Participants were provided information of medical institutions or services they needed by telephone during or after the telephone counseling. |

Handled by other departments:
Participants needing services related to the Basic Survey and/or Thyroid Ultrasound Examination of FMU’s Radiation Medical Science Center.

## 3. Results

### 3.1 Numbers of Respondents Requiring Support and the Support Provided

A total of 1,256 children required support; 504 of them needed telephone counseling and 752 were determined to require support with written materials. Of the 752 participants, 37 were determined to require telephone counseling based on the responses to the written materials.
A total of 11,507 adults required support; 3,843 of them needed telephone counseling and 7,664 were determined to require support with written materials. After receiving the support with written materials, 616 were determined to require telephone counseling. The number of those who only met the criteria of CAGE test scores was 2,010 .
To those who were identified as requiring support but could not be reached for telephone support (except for the deceased), and to those who only met the criteria of CAGE test scores, information was provided by sending booklet made by Radiation Medical Science Center of FMU: Mental Health and Lifestyle Support.

Figure 1 shows the numbers of respondents requiring support and the support provided. It excludes participants who only met the criteria of CAGE test scores.
The percentages are rounded and may not total to $100 \%$.

* Those who responded by 31 October 2014.
** Those who were determined to require support by 31 December 2014.
*** Those who declined support by replying to the written support materials. (Excluding the participants who indicated no desire for support in the return postcard.)
**** Those who received telephone counseling but not enough support during a given time.

Figure 1: Number of participants required support and the number of support provided

### 3.2 Children

Since SDQ is for children aged 4 years and older, children aged 0-3 years old were determined on the basis of the free-answer question. Since few participants who had been sent written materials received telephone counseling (2 of age $0-3$ years, 8 of age 4-6 years, 17 of primary school age, 5 of middle school age), the following results combine participants requiring telephone counseling with the number of those determined to require phone support based on the written materials.

## 3.2-1 Status of Respondents Requiring Support

A total of 541 children required support; 504 of them needed telephone counseling and 37 were determined to require telephone support on the basis of the written support materials. Of these 541 children, 321 (59.3\%) were male and 220 ( $40.7 \%$ ) were female. Phone support was successfully provided to 473 ( $87.4 \%$ ) of the total. Respondents living within Fukushima Prefecture were 330 (69.8\%) and 143 (30.2\%) were living outside Fukushima (Table 1).

Table 1: Status of children requiring support (By sex and area)

| Participants requiring support | Total 541 | $\begin{gathered} 0-3 \text { years } \\ 10 \end{gathered}$ | $\begin{gathered} \hline 4-6 \text { years } \\ 124 \end{gathered}$ | Primary school age 265 | Middle school age $142$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Male | 321 (59.3\%) | 3 (30.0\%) | 79 (63.7\%) | 165 (62.3\%) | 74 (52.1\%) |
| Female | 220 (40.7\%) | 7 (70.0\%) | 45 (36.3\%) | 100 (37.7\%) | 68 (47.9\%) |
| Support Given | 473 | 9 | 110 | 232 | 122 |
| Within Fukushima | 330 (69.8\%) | 6 (66.7\%) | 76 (69.1\%) | 158 (68.1\%) | 90 (73.8\%) |
| Outside Fukushima | 143 (30.2\%) | 3 (33.3\%) | 34 (30.9\%) | 74 (31.9\%) | 32 (26.2\%) |

The numbers shown of those given support only include participants who were provided telephone counseling.

## 3.2-2 Participants' State of Health

In order to more comprehensively understand the situation the participants are facing, we added new question items with the help of physicians specialized in child and adolescent psychiatry. Table 2 shows the frequency of the questions and answers talked about with participants (or guardians) during the telephone support.

Table 2-1: State of health of participants who received telephone counseling

| Number of Support Given | $\begin{gathered} \hline \text { Total } \\ 473 \\ \hline \end{gathered}$ |  | $\begin{gathered} \hline 0-3 \text { years } \\ 9 \\ \hline \end{gathered}$ |  | $\begin{gathered} \hline 4-6 \text { years } \\ 110 \\ \hline \end{gathered}$ |  | Primary school age 232 |  | Middle school age 122 |  |

The participants who did not mention the issue go to 'Unclear' category.
Proportions do not include the number of 'Unclear'.

Among the participants who received the telephone support, the most frequently discussed issues were the following: 124 participants had friendship problems (32.6\%), 104 talked about rebellious behaviors (31.4\%), 116 discussed becoming irritable (34.4\%), 109 talked about being emotionally dependent (38.0\%), and 125 guardians had anxiety about child rearing (30.3\%).

As of treatments, 37 visited psychiatrists or psychosomatic medicine services (10.2\%), 41 visited other departments or clinics (11.3\%), and 286 did not visit any clinics (78.6\%).

## 3.2-3 Results of Telephone Counseling and Continued Support

The results of the support were categorized into 'Follow-up 1,' 'Follow-up 2,' 'Follow-up 3,' and 'Declined Support' as was the case in the previous surveys (Table 3). The breakdown below shows the criteria of 'Follow-up 2,' which were divided into the problems faced by the children and the problems faced by the guardians (Table 4). Numbers in the breakdown (Table 4) refer to the total number and the proportion in the brackets show the ratio of total number to the number of ‘Follow-up 2.’

After the telephone support, 355 (75.1\%) were categorized as 'Follow-up 1,' 102 (21.6\%) were categorized as ‘Follow-up 2,’ 9 (1.9\%) were categorized as 'Follow-up 3,’ and 7 (1.5\%) declined support (Table 3). Among the participants who were categorized as 'Follow-up 2,' 34 children (33.3\%) had school adjustment problems, and 28 children (27.5\%) and 39 guardians (38.2\%) had mental problems.

Table 3: Results of support given (Children)

| Number of support given | Total $473$ | $\begin{gathered} \hline 0-3 \text { years } \\ 9 \\ \hline \end{gathered}$ |  | $\begin{gathered} \hline 4-6 \text { years } \\ 110 \\ \hline \end{gathered}$ | Primary school age $232$ | Middle school age $122$ |

## 3.2-4 Problems Faced by Participants (children)

Since the Mental Health and Lifestyle Survey in FY 2011, we have used analytic induction to understand the problems discussed by participants on the phone. The problems fall into four broad categories: child's reaction, parent/guardian and family problems, school and neighborhood relationships, and environment. Child's reaction and parent/guardian and family problems divide into subcategories. Figure 2 is the conceptual diagram of those problems.

The content of the respondents' problems mentioned for the FY 2013 survey were categorized, as was the case in FY 2012, based on the categories from the survey for FY 2011.
Frequently mentioned problems in the FY 2013 survey were impact on school and irritability and violence (from the category 'child's reaction'), and parent/guardian's problems from the category 'parent/guardian and family problems.'

Figure 2: Conceptual diagram of problems faced by participants (children)

### 3.3 Adults

## 3.3-1 Status of Respondents Requiring Support

## (Telephone Counseling)

A total of 3,843 adults required telephone counseling. Among the 3,020 participants identified on the basis of the scores, 1,150 (38.1\%) were male and 1,870 ( $61.9 \%$ ) were female. 823 participants were determined on the basis of items other than scores. Of these, 392 (47.6\%) were male and 431 (52.4\%) were female (Table 6). Telephone support was provided to 3,321 (86.4\%). Among the participants, 2,622 (79.0\%) lived within Fukushima Prefecture and 699 (21.0\%) lived outside Fukushima (Table 7).

Table 6: Participants requiring telephone counseling (By sex and age group)

Table 7: Participants requiring telephone counseling (By area)

| Area of residence | Support given |  | Based on the scores |  | Items other than scales |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  |
| Within Fukushima | 2,622 | (79.0\%) | 2,049 | (78.6\%) | 573 | (80.4\%) |
| Outside Fukushima | 699 | (21.0\%) | 559 | (21.4\%) | 140 | (19.6\%) |

The numbers shown of those given support only include participants who were provided telephone counseling.

## (Written Materials)

Among the participants requiring written support materials, a total of 616 required telephone counseling. Out of the 479 participants identified on the basis of the scores, 210 ( $43.8 \%$ ) were male and 269 (56.2\%) were female. 137 participants were determined on the items other than scales. Of these, 76 (55.5\%) were male and 61 (44.5\%) were female (Table 8). The telephone counseling was provided to 592 (96.1\%). Of these, 483 (81.6\%) lived within Fukushima Prefecture and 109 (18.4\%) lived outside Fukushima (Table 9).

Table 8: Participants required telephone counseling among those who required support by written materials (By sex and age group)

| Age group | Based on the scores |  |  |  |  | Based on the items other than scales |  |  |  |  |

| Unclear | 1,218 | - | 817 | - | 401 | - |

The participants who did not mention the issue go to 'Uncertain' category.
Proportion does not include the number of 'Unclear'.

Comparing physical conditions with a year ago, 417 (13.4\%) saw improvement, 2,080 (66.6\%) saw no changes, 502 (16.1\%) became worse, and 123 (3.9\%) have not had problems so far. Asked about their sleep compared to a year ago, 339 (11.2\%) saw improvement, 2,279 (75.0\%) saw no changes, 243 (8.0\%) became worse, 178 (5.9 \%) have not had problems so far.
As for clinics, 468 (15.4\%) were treated by psychiatrists or psychosomatic medicine specialists, 1,959 (64.3\%) were treated by other specialists, and 621 (20.4\%) did not see a doctor.

## (Written Materials)

We provided telephone counseling to those who indicated their desire for telephone support by return postcard, and to those who were determined by the Mental Health Support Team that they required support based on the content of the reply. We asked participants over the phone about their physical condition, sleep, and what medical institutions they visited for consultation.

The participants who did not mention the issue go to 'Uncertain' category.
Proportion does not include the number of 'Unclear'.

Comparing the physical condition with a year ago, 47 (8.7\%) saw improvement, 368 (67.8\%) saw no changes, 97 (17.9\%) became worse, 31 (5.7\%) have not had problems so far.
Asked about their sleep compared to a year ago, 27 (5.2\%) saw improvement, 400 ( $76.8 \%$ ) saw no changes, 25 (4.8\%) became worse, 69 (13.2\%) have not had problems so far.
As for clinics, 42 (7.5\%) were treated by psychiatrists or psychosomatic medicine specialists, 438 (78.1\%) were treated by other specialists, and 81 (14.4\%) did not see a doctor.

## 3.3-3 Results of Telephone Counseling and the Continued Support

The results of the support were categorized into 'Follow-up 1,' 'Follow-up 2,' 'Follow-up 3,' and 'Declined Support' as was the case in the previous surveys. The breakdown below shows the criteria of 'Follow-up 2.' Numbers in the breakdown (Table 13 and 16) refer to the total number and the proportion in the brackets show the ratio of total number to the number of 'Follow-up 2.'

## (Respondents Required Telephone Counseling)

After the telephone counseling, 2,573 (77.5\%) were designated as 'Follow-up 1,' 599 (18.0\%) as ‘Follow-up 2,' 114 (3.4\%) as ‘Follow-up 3,' and 35 (1.1\%) as ‘Declined Support' (Table 12). The reasons for 'Follow-up 2' were categorized into the following: 308 (51.4\%) for physical health problems, 412 (68.8\%) for mental health problems, 64 (10.7\%) for emotional aftermath, 63 (10.5\%) for adjustment problems, 69 (11.5\%) for isolation (Table 13).

Table 12: Results of telephone counseling

| Number of support given | $\begin{gathered} \text { Total } \\ 3,321 \end{gathered}$ |  | Based on the scores$2,608$ |  | Items other than scales 713 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Follow-up 1 | 2,573 | (77.5\%) | 1,982 | (76.0\%) | 591 | (82.9\%) |
| Follow-up 2 | 599 | (18.0\%) | 501 | (19.2\%) | 98 | (13.7\%) |
| Follow-up 3 | 114 | (3.4\%) | 94 | (3.6\%) | 20 | (2.8\%) |
| Declined support | 35 | (1.1\%) | 31 | (1.2\%) | 4 | (0.6\%) |

Table 13: Breakdown of the reasons for 'Follow-up 2'

| Number of 'Follow-up 2' | Total |  | Based on the scores$501$ |  | Items other than scales$98$ |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 599 |  |  |  |  |  |
| Physical problems | 308 | (51.4\%) | 261 | (52.1\%) | 47 | (48.0\%) |
| Mental problems | 412 | (68.8\%) | 347 | (69.3\%) | 65 | (66.3\%) |
| Emotional aftermath | 64 | (10.7\%) | 57 | (11.4\%) | 7 | (7.1\%) |
| Adjustment disorder | 63 | (10.5\%) | 59 | (11.8\%) | 4 | (4.1\%) |
| Isolation | 69 | (11.5\%) | 62 | (12.4\%) | 7 | (7.1\%) |

For continued support, 214 were designated as 'Follow-up,' 65 were connected to the municipal government, 8 were sent a referral, 34 were sent list of registered doctors within Fukushima Prefecture, 5 were sent list of medical institutions outside Fukushima, 4 were designated as 'Sharing information,' 34 were provided information, and 6 were handled by other departments (Table 14).

Table 14: Continued support

| Number of support given | $\begin{gathered} \text { Total } \\ 3,321 \end{gathered}$ |  | Based on the scores2,608 |  | Items other than scales$713$ |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Follow-up | 214 | (6.4\%) | 121 | (4.6\%) | 93 | (13.0\%) |
| Municipal government | 65 | (2.0\%) | 56 | (2.1\%) | 9 | (1.3\%) |
| Referral | 8 | (0.2\%) | 7 | (0.3\%) | 1 | (0.1\%) |

## 3.3-4 Problems Faced by Participants (adults)

Since the Mental Health and Lifestyle Survey in FY 2011, we have used analytic induction to understand the problems faced by participants. The problems fall into four broad categories: personal problems, household problems, problems with social life, and environment and culture. Personal problems, household problems, and problems with social life divide into subcategories. Figure 3 is the conceptual diagram of those problems.

The content of the respondents’ problems mentioned in the FY 2013 survey were categorized, as was the case in FY 2012, based on the categories from the survey for FY 2011.
Frequently mentioned problems in the FY 2013 survey were physical problems, disrupted sleep, depression, anxiety about the future (from the category 'Personal reaction'), and changes in living environment, family relationships, changes in daily life and habits (from the category 'Household problems'), and dissatisfaction with government policies or problems with disaster claims from the category 'Problems with social life'.

Figure 3: Conceptual diagram of problems faced by participants (adults)

## 4. Conclusion

The number of those who required support was 1,256 children and 11,507 adults for the Mental Health and Lifestyle Survey for FY 2013. Based only on the CAGE test scores, the number was 2,010. Among the children, 504 required telephone counseling and 752 required written support materials. The number of participants determined to require telephone support based on the content of written materials was 37 . The number of adults who required telephone counseling was 3,843 and 7,664 required written materials. The number of those determined to require telephone support based on the content of written materials was 616. If those identified as requiring support could not be reached for telephone counseling (except for the deceased), information was provided by sending booklet made by Radiation Medical Science Center of FMU: Mental Health and Lifestyle Support. It was also distributed to those who only met the criteria of CAGE test scores.

After the telephone counseling for children, 355 (75.1\%) were categorized as 'Follow-up 1*,' and 102 (21.6\%) were categorized as 'Follow-up 2**.' Frequently discussed issues were impact on school, and irritability and violence form the category 'Child's reaction,' and parent or guardian's problem from the category 'Parent/Guardian and family problems.'
Among the adults, 2,573 (77.5\%) were categorized as 'Follow-up 1' and 599 (18.0\%) were categorized as 'Follow-up 2.' Among the respondents who required written materials, 506 (85.5\%) were categorized as 'Follow-up 1' and 78 (13.2\%) were categorized as 'Follow-up 2.' Frequently discussed issues were physical problems, disrupted sleep, depression, and anxiety about the future from the category 'Personal reaction,' changes in living environment, family relationships, and changes in daily life and habits from the category 'Household problems,' and dissatisfaction with government policies or problems of disaster claims from the category 'Problems with social life.'

* Participants confirmed to be improving or self-managing their problems.
** Participants not recovering from health problems, the emotional aftermath, adjustment disorder etc.

## Pregnancy and Birth Survey for FY 2013

Reported on 12 February 2015

## 1. Outline

### 1.1 Purpose

Fukushima Medical University established a Pregnancy and Birth Survey in FY 2011 to promote health management of women and mothers in Fukushima under the initiative of Fukushima Prefecture.

The survey revealed that pregnant women and mothers with infants strived to raise their children in Fukushima Prefecture since the Great East Japan Earthquake and the subsequent nuclear disaster, despite the evacuation, changes in daily life, and concerns toward health effects of radiation.

We continued to conduct the survey in FY 2013 to address their anxiety and provide necessary support through assessing their physical and mental health. The survey also aims to improve perinatal care in Fukushima Prefecture by listening to their needs and expectations.

### 1.2 Group

Those who received Maternal and Child Health Handbooks from municipal offices in Fukushima Prefecture between 1 August 2012 and 31 July 2013, and those who had handbooks issued during the same period in other prefectures but received antenatal care or delivered babies in Fukushima Prefecture.

Number of participants: 15,218 (FY 2011: 16,001; FY 2012: 14,516)

### 1.3 Methods

Survey questionnaire was sent to the participants on 18 December 2013.
Newly added questions from FY 2013 address the issue of tobacco smoking.

### 1.4 Data Tabulation Period

From 24 December 2013 through 26 December 2014
(FY 2012 survey: From 14 December 2012 through 30 November 2013)
(FY 2011 survey: From 20 January 2012 through 31 March 2013)

## 2. Survey Results

The number of valid responses may not equal to the survey total because of missing answers.

### 2.1 Response Rates

The total number of responses for FY 2013 Survey was 7,260 (47.7\%).
Valid responses: 7,214
Invalid responses: 46 (No response: 10; Duplication: 8; Exclusions: 28)
The total number of responses for FY 2011 Survey was 9,316 ( $58.2 \%$ ), and it was 7,181 (49.5\%) in FY 2012.

The response rate of the survey for FY 2013 was lower than that for FY 2011 but nearly the same as FY 2012.

### 2.2 Respondents

- The number of responses for FY 2013 by area was as follows: Kempoku, 1,936 (53.2\%); Kenchu, 1,982 (44.5\%); Kennan, 588 (48.5\%); Soso, 535 (45.4\%); Iwaki, 1,195 (45.1\%); Aizu, 833 ( $45.9 \%$ ); Minami-aizu, 83 (51.2\%); outside Fukushima Prefecture, 108.
- Compared with FY 2011, the overall response rate declined in all areas. However, compared with FY 2012, the overall response rate was almost the same, with a slight decline in Kempoku, Kenchu and Iwaki, and a slight improvement in Kennan, Soso, Aizu and Minami-aizu.
- Roughly two-thirds of respondents were in the 25-34 age group, followed by 35-39 and 20-24 age groups. The same trend was seen in FY 2011 and FY 2012.

### 2.3 Pregnancy Outcome

- There was little difference in the proportion of miscarriage ( $0.78 \%$ ) and abortion ( $0.04 \%$ ) after receiving the Maternal and Child Health Handbooks compared with those in FY 2011 (miscarriage, $0.77 \%$; abortion, $0.06 \%$ ), and FY 2012 (miscarriage, $0.81 \%$; abortion, $0.08 \%$ ). (Q10)
- The proportion of preterm deliveries was $5.40 \%$, which was almost the same as FY 2011 (4.75\%), FY 2012 (5.74\%), and the recent data in Japan 2013; 5.8\% (Q18)
- The proportion of low birth weight infants was $9.9 \%$, which was higher than FY 2011 (8.9\%) and FY 2012 (9.6\%), but roughly the same as the recent data in Japan 2013; 9.6\% (Q19)
- The incidence of congenital anomalies in singleton pregnancies was $2.35 \%$, which was roughly the same as FY $2011(2.85 \% *)$ and FY $2012(2.39 \%)$, and a generally reported incidence of 3-5\%. The most frequent anomaly was cardiovascular malformation with an incidence of $0.91 \%(0.89 \% *$ in FY 2011, and $0.79 \%$ in FY 2012), which was similar to a generally reported incidence of $1 \%$. (Q19) Note: The denominator was the total number of valid responses.

### 2.4 Mental Health of Mothers

- The proportion of mothers with depressive symptom(s) was $24.5 \%$, which was lower than the previous surveys ( $27.1 \%$ in FY 2011 and $25.5 \%$ in FY 2012). (Q4-1, Q4-2) The area with the highest rate was Minami-aizu ( $32.5 \%$ ) in FY 2013, whereas it was the Soso area in FY 2011 (32.1\%) and in FY 2012 (32.9\%) compared to $28.2 \%$ in FY 2013. According to the national maternal and child health plan in Japan (Sukoyaka Oyako 21), the proportion of mothers with postpartum depression, evaluated by using the Edinburgh Postnatal Depression Scale, was $9.0 \%$ in 2013, and the estimated proportion of postpartum depression from this survey based on the

Edinburgh Postnatal Depression Scale was 13\%. Reference: Mishina H, et al. Pediatr Int. 2009; 51: 48.

### 2.5 Perinatal Care

- Mothers were asked if they received sufficient antenatal and delivery care, and $2.3 \%$ answered NO or NOT AT ALL, which was lower than that of FY 2012 (3.5\%). (Q3)
- The proportion of those who could not receive antenatal care or deliver at initially planned medical institutions was $14.7 \%$, which was below $24.6 \%$ in FY 2011, but roughly the same as FY 2012
( $14.1 \%$ ). Outside Fukushima Prefecture had the highest rate ( $36.3 \%$ ) as was the case in FY 2012 ( $26.9 \%$ ). The proportion of respondents who chose to change their clinics outside the prefecture was $22.5 \%$, which was lower than that of FY 2011 (54.7\%), but roughly the same as FY 2012 (24.9\%). (Q12)
- The proportion of those who could not receive antenatal care as scheduled was $2.2 \%$, which was below that of $18.8 \%$ in FY 2011, but remain the same as in FY 2012 (2.2\%). (Q13)

### 2.6 Family and Child Rearing

- The Soso area had the highest proportion of those who had evacuated (50.9\%) but the proportion declined compared to $61.3 \%$ in FY 2012. (Q5)
- The proportion of those who were not confident in child rearing was $17.5 \%$, which was higher than $15.4 \%$ in FY 2012. (Q20)
According to the 2010 national survey to assess toddlers' health status, the proportion of mothers with one-year-old children, who were not confident in child rearing, was $23.0 \%$.
- When asked how they fed their babies before weaning, $36.6 \%$ answered breastfeeding only, $54.4 \%$ breast and bottle feeding combined, $8.7 \%$ bottle feeding only. The proportion of breastfeeding increased from $30.4 \%$ in FY 2011 and $35.2 \%$ in FY 2012. (Q21) When asked about the reasons for choosing bottle feeding, $77.1 \%$ answered not enough breast milk, and $1.8 \%$ were worried about the effects of radiation (the proportion decreased from $19.8 \%$ in FY 2011, and $6.2 \%$ in FY 2012). According to the survey by the Ministry of Health, Labour and Welfare, the national average of mothers who were breastfeeding when their baby was four months old was $35-40 \%$ ( $55.8 \%$ in FY 2010). Compared to the national data, the proportion in Fukushima Prefecture had been low; the survey in 2007 by the Breastfeeding Association in Fukushima found that $32.2 \%$ mothers were breastfeeding their four months old baby.

### 2.7 Family Planning

- $52.8 \%$ of respondents were planning a pregnancy ( $52.9 \%$ in FY 2012). According to the 14th National Fertility Survey in 2010, $58 \%$ of couples married for less than 10 years were planning a pregnancy. The proportion was $51 \%$ among those who already had a child.
- Following services were requested among those who were planning a pregnancy: improvement of preschool, care for longer hours, or day care for sick children, $70.5 \%$; information or services about child rearing and pediatric medicine, $66.6 \%$.
- The reasons for not planning a pregnancy were as follows: no desire, $54.4 \%$; busy raising children, $36.6 \%$. The proportion of respondents who worried about the effects of radiation was $5.6 \%$ which was below $14.8 \%$ in FY 2012.

### 2.8 Free-answer Questions

- The total of 867 respondents ( $12.0 \%$ ) answered the free-answer questions. The number was lower than that of 3,722 (42.2\%) in FY 2011 and 1,481 (20.7\%) in FY 2012.

### 2.9 Conclusion

- The response rate was $47.7 \%$, which was below $58.2 \%$ in FY 2011 and almost the same as $49.5 \%$ in FY 2012.
- The proportions of miscarriage ( $0.78 \%$ ) or abortion $(0.04 \%)$ after receiving the Maternal and Child Health Handbooks stayed roughly the same as in FY2011 (miscarriage, $0.77 \%$; abortion, $0.06 \%$ ), and FY 2012 (miscarriage, $0.81 \%$; abortion, $0.08 \%$ ).
- The proportion of preterm deliveries was $5.40 \%$, which was roughly the same as $4.75 \%$ in FY 2011 and $5.74 \%$ in FY 2012. The proportion of low birth weight infants was $9.9 \%$, which was slightly above the numbers in the previous years ( $8.9 \%$ in FY 2011, and $9.6 \%$ in FY 2012), but roughly the same as the national average.
- The incidence of congenital anomalies in singleton pregnancies was $2.35 \%$, which was roughly the same as 2.85\% in FY 2011, 2.39\% in FY 2012 and the generally reported incidence of 3-5\%.
- The proportion of mothers with depression symptom(s) was $24.5 \%$, which was below FY 2011 ( $27.1 \%$ ) and FY 2012 ( $25.5 \%$ ), but the estimated proportion was still higher than the national average.
- $52.8 \%$ were planning a pregnancy. The proportion was roughly the same as the data from the National Fertility Survey in 2010 (The proportion was $51 \%$ among those who already had a child).

[^5]
## 3. Support after the Survey

### 3.1 Purpose

Counseling was provided via telephone or email by midwives and public health nurses for respondents who were screened to be in need of support in order to address their anxiety.

### 3.2 Support Group

Respondents of the Pregnancy and Birth Survey for FY 2013

### 3.3 Criteria for Support

- Respondents who had two depression symptoms
- Respondents who were screened based on their opinions written in a given free space

We used wider criteria than the previous year:
Those who appeared to have a severely depressed mood
Those in need of support for child rearing
Those who are concerned about radiation exposure
Those who want detailed information
Those who requested support

### 3.4 Methods

Support via telephone and email

## 4. Results of the Support

Note: Participants who responded after 26 December 2014 and received support were excluded.

### 4.1 Number of Supports Given

- The number of those who required telephone support was 1,101 out of 7,260 who responded from 24 December 2013 through 26 December 2014. The proportion was $15.2 \%$, which was roughly the same as that of FY 2011: 1,401 (15.0\%); FY 2012: 1,104 (15.4\%). The number of those who received support via email was 3 (13 in FY 2011, and 6 in FY 2012).
- $67.6 \%$ were screened based on their depression symptoms ( $87.4 \%$ in FY 2011, and $68.0 \%$ in FY 2012), and $32.4 \%$ based on their comments written in a free space ( $12.6 \%$ in FY 2011, and 32.0\% in FY 2012).

### 4.2 Content

- The most frequently discussed issue by the respondents was physical and mental health of mothers ( $42.5 \%$ ), as was the case issue in FY 2012 ( $33.4 \%$ ), followed by child rearing ( $38.7 \%$ ) and physical and mental health of children ( $20.3 \%$ ). Concerns about radiation were the most frequent category in FY 2011 (29.2\%).

### 4.3 Reasons for Completing Support

- We completed telephone support after carefully listening to mothers' concerns in 679 (61.7\%) cases, providing information about other counseling services in 473 (43.0\%) cases, confirming that they were already receiving care in 271 ( $24.6 \%$ ) cases, and answering to their specific questions in 128 ( $11.6 \%$ ) cases. In other cases, $104(9.4 \%)$ respondents were recommended further treatment, 6 $(0.5 \%)$ were referred to clinical psychologists, $1(0.1 \%)$ was connected to municipal government, 1 ( $0.1 \%$ ) was referred to specialists, 209 ( $19.0 \%$ ) did not answer our calls, 12 ( $1.1 \%$ ) did not provide their phone numbers, $3(0.3 \%)$ declined support, and $2(0.2 \%)$ were categorized as 'Other.' Note: Multiple answers allowed. The denominator is the total number of supports provided.

### 4.4 Conclusion

- The proportion of mothers to whom we provided support was roughly the same as in FY 2011 and FY 2012. We provided more support by increasing the proportion of those required support on the basis of free-answered questions as was the case in FY 2012.
- The most frequently discussed issue in the counseling was physical and mental health of mothers as was the case in FY 2012. Issues related to radiation became less frequent.

## Results of Pregnancy and Birth Survey for FY2013

## 1. Response rates

Responses received from 24 December 2013 through 26 December 2014

| Area | Participants |  | Responses <br> (Response rate) |  |
| :--- | ---: | ---: | ---: | ---: |
| Kempoku | 3,637 | $23.9 \%$ | 1,936 | $53.2 \%$ |
| Kenchu | 4,453 | $29.3 \%$ | 1,982 | $44.5 \%$ |
| Kennan | 1,213 | $8.0 \%$ | 588 | $48.5 \%$ |
| Soso | 1,178 | $7.7 \%$ | 535 | $45.4 \%$ |
| Iwaki | 2,649 | $17.4 \%$ | 1,195 | $45.1 \%$ |
| Aizu | 1,816 | $11.9 \%$ | 833 | $45.9 \%$ |
| Minami-aizu | 162 | $1.1 \%$ | 83 | $51.2 \%$ |
| Outside <br> Fukushima | 110 | $0.7 \%$ | 108 | $98.2 \%$ |
| Total | 15,218 | $100.0 \%$ | 7,260 | $47.7 \%$ |

## 2. Results by Items

The total number is 7,214 of 7,260 participants excluding 46 invalid responses ( 10 nonrespondents, 8 overlapping respondents, and 28 exclusions). Each item includes nonrespondents and invalid responses.

## Age Group of Participants

| Area | Ages 15-19 |  | Ages 20-24 |  | Ages 25-29 |  | Ages 30-34 |  | Ages 35-39 |  | Ages 40-44 |  | Ages 45-49 |  | No response |  | Total |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Kempoku | 12 | 0.6\% | 164 | 8.5\% | 593 | 30.8\% | 633 | $32.8 \%$ | 414 | 21.5\% | 80 | 4.1\% | 1 | 0.1\% | 31 | 1.6\% | 1,928 | 100.0\% |
| Kenchu | 8 | 0.4\% | 193 | 9.8\% | 628 | 31.9\% | 642 | 32.6\% | 391 | 19.8\% | 76 | 3.9\% | 1 | 0.1\% | 32 | 1.6\% | 1,971 | 100.0\% |
| Kennan | 3 | 0.5\% | 51 | 8.7\% | 194 | 33.1\% | 190 | 32.4\% | 113 | 19.3\% | 26 | 4.4\% | 2 | 0.3\% | 7 | 1.2\% | 586 | 100.0\% |
| Soso | 5 | 0.9\% | 76 | 14.3\% | 185 | 34.8\% | 136 | 25.6\% | 108 | 20.3\% | 10 | 1.9\% | 1 | 0.2\% | 10 | 1.9\% | 531 | 100.0\% |
| Iwaki | 10 | 0.8\% | 131 | 11.0\% | 321 | 27.0\% | 417 | 35.1\% | 236 | 19.9\% | 48 | 4.0\% | 0 | 0.0\% | 24 | 2.0\% | 1,187 | 100.0\% |
| Aizu | 6 | 0.7\% | 94 | 11.4\% | 258 | 31.2\% | 258 | 31.2\% | 170 | 20.6\% | 23 | 2.8\% | 1 | 0.1\% | 16 | 1.9\% | 826 | 100.0\% |
| Minami-aizu | 0 | 0.0\% | 10 | 12.0\% | 21 | 25.3\% | 31 | 37.3\% | 16 | 19.3\% | 2 | 2.4\% | 0 | 0.0\% | 3 | 3.6\% | 83 | 100.0\% |
| Outside Fukushima | 0 | 0.0\% | 10 | 9.8\% | 38 | 37.3\% | 40 | 39.2\% | 10 | 9.8\% | 2 | 2.0\% | 0 | 0.0\% | 2 | 2.0\% | 102 | 100.0\% |
| Total | 44 | 0.6\% | 729 | 10.1\% | 2,238 | 31.0\% | 2,347 | 32.5\% | 1,458 | 20.2\% | 267 | 3.7\% | 6 | 0.1\% | 125 | 1.7\% | 7,214 | 100.0\% |

Ages are at the time when pregnancy outcome occurred.
Q2. Do you think of yourself as healthy?

| Area | Very much |  | A little |  | Not so much |  | No |  | No response |  | Total |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Kempoku | 480 | 24.9\% | 1,367 | 70.9\% | 74 | 3.8\% | 5 | 0.3\% | 2 | 0.1\% | 1,928 | 100.0\% |
| Kenchu | 550 | 27.9\% | 1,345 | 68.2\% | 70 | 3.6\% | 2 | 0.1\% | 4 | 0.2\% | 1,971 | 100.0\% |
| Kennan | 149 | 25.4\% | 415 | 70.8\% | 22 | 3.8\% | 0 | 0.0\% | 0 | 0.0\% | 586 | 100.0\% |
| Soso | 109 | 20.5\% | 394 | 74.2\% | 25 | 4.7\% | 2 | 0.4\% | 1 | 0.2\% | 531 | 100.0\% |

| Asplenia syndrome | 1 |

Q20. Do you sometimes lose confidence in child rearing?
The questions below are for 7,125 respondents who gave birth.

| Area | Yes |  | No |  | Not sure |  | No response |  | Total |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Kempoku | 367 | 19.3\% | 828 | 43.5\% | 697 | 36.6\% | 13 | 0.7\% | 1,905 | 100.0\% |
| Kenchu | 356 | 18.3\% | 832 | 42.7\% | 745 | 38.2\% | 16 | 0.8\% | 1,949 | 100.0\% |
| Kennan | 105 | 18.2\% | 278 | 48.1\% | 190 | 32.9\% | 5 | 0.9\% | 578 | 100.0\% |
| Soso | 92 | 17.6\% | 229 | 43.8\% | 199 | 38.0\% | 3 | 0.6\% | 523 | 100.0\% |
| Iwaki | 160 | 13.7\% | 585 | 50.1\% | 411 | 35.2\% | 12 | 1.0\% | 1,168 | 100.0\% |
| Aizu | 123 | 15.0\% | 380 | 46.5\% | 309 | 37.8\% | 6 | 0.7\% | 818 | 100.0\% |
| Minami-aizu | 18 | 22.0\% | 30 | 36.6\% | 33 | 40.2\% | 1 | 1.2\% | 82 | 100.0\% |
| Outside <br> Fukushima | 27 | 26.5\% | 36 | 35.3\% | 39 | 38.2\% | 0 | 0.0\% | 102 | 100.0\% |
| Total | 1,248 | 17.5\% | 3,198 | 44.9\% | 2,623 | 36.8\% | 56 | 0.8\% | 7,125 | 100.0\% |

Q21. How did you feed your baby before starting solids?

| Area | Breast milk |  | Formula and breast milk |  | Formula |  | No response |  | Total |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Kempoku | 750 | 39.4\% | 1,022 | 53.6\% | 127 | 6.7\% | 6 | 0.3\% | 1,905 | 100.0\% |
| Kenchu | 689 | 35.4\% | 1,079 | 55.4\% | 172 | 8.8\% | 9 | 0.5\% | 1,949 | 100.0\% |
| Kennan | 186 | 32.2\% | 313 | 54.2\% | 77 | 13.3\% | 2 | 0.3\% | 578 | 100.0\% |
| Soso | 186 | 35.6\% | 270 | 51.6\% | 67 | 12.8\% | 0 | 0.0\% | 523 | 100.0\% |
| Iwaki | 467 | 40.0\% | 601 | 51.5\% | 93 | 8.0\% | 7 | 0.6\% | 1,168 | 100.0\% |
| Aizu | 260 | 31.8\% | 488 | 59.7\% | 69 | 8.4\% | 1 | 0.1\% | 818 | 100.0\% |
| Minami-aizu | 27 | 32.9\% | 44 | 53.7\% | 10 | 12.2\% | 1 | 1.2\% | 82 | 100.0\% |
| Outside Fukushima | 42 | 41.2\% | 56 | 54.9\% | 4 | 3.9\% | 0 | 0.0\% | 102 | 100.0\% |
| Total | 2,607 | 36.6\% | 3,873 | 54.4\% | 619 | 8.7\% | 26 | 0.4\% | 7,125 | 100.0\% |

Q21-1. Why did you choose formula?

| Area | Do not have enough breast milk |  | Worried about the effects of radiation |  | Other |  | Valid response |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Kempoku | 868 | 76.0\% | 17 | 1.5\% | 297 | 26.0\% | 1,142 |
| Kenchu | 979 | 78.8\% | 25 | 2.0\% | 280 | 22.5\% | 1,242 |
| Kennan | 307 | 80.4\% | 5 | 1.3\% | 80 | 20.9\% | 382 |
| Soso | 233 | 70.0\% | 10 | 3.0\% | 103 | 30.9\% | 333 |
| Iwaki | 522 | 76.2\% | 16 | 2.3\% | 169 | 24.7\% | 685 |
| Aizu | 437 | 78.7\% | 5 | 0.9\% | 127 | 22.9\% | 555 |
| Minami-aizu | 40 | 75.5\% | 0 | 0.0\% | 16 | 30.2\% | 53 |
| Outside Fukushima | 47 | 78.3\% | 0 | 0.0\% | 15 | 25.0\% | 60 |
| Total | 3,433 | 77.1\% | 78 | 1.8\% | 1,087 | 24.4\% | 4,452 |

The denominator is the sum of valid answers (i.e., Respondents who answered to the next question).
Proportion does not total to $100 \%$ because of multiple answers.
The figure differs from the survey for FY 2011 since the denominator included multiple answers.

Q21-2. What kind of water did or do you use for formula?

| Area | Tap |  | Bottled |  | Other |  | Valid response |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Kempoku | 487 | 42.6\% | 691 | 60.5\% | 31 | 2.7\% | 1,142 |
| Kenchu | 518 | 41.6\% | 780 | 62.7\% | 30 | 2.4\% | 1,244 |
| Kennan | 199 | 51.6\% | 208 | 53.9\% | 3 | 0.8\% | 386 |
| Soso | 93 | 28.0\% | 246 | 74.1\% | 6 | 1.8\% | 332 |
| Iwaki | 263 | 38.1\% | 454 | 65.8\% | 8 | 1.2\% | 690 |
| Aizu | 396 | 71.2\% | 186 | 33.5\% | 15 | 2.7\% | 556 |
| Minami-aizu | 43 | 79.6\% | 16 | 29.6\% | 0 | 0.0\% | 54 |
| Outside <br> Fukushima | 31 | 51.7\% | 30 | 50.0\% | 3 | 5.0\% | 60 |
| Total | 2,030 | 45.5\% | 2,611 | 58.5\% | 96 | 2.2\% | 4,464 |

The denominator is the sum of valid answers (i.e., Respondents who answered to the question).
Proportion does not total to $100 \%$ because of multiple answers.

Q22. Results of medical checkup of babies aged one month or more
When did you go for a medical checkup of the babies?
Number of participants was 7,048 ( 6,911 singleton and 137 twin pregnancies) who received medical checkup within 60 days after delivery.

| Area | Participants | Mean age (Days) |
| :---: | :---: | :---: |
| Kempoku | 1,882 | 35.1 |
| Kenchu | 1,934 | 33.1 |
| Kennan | 574 | 32.4 |
| Soso | 526 | 32.3 |
| Iwaki | 1,138 | 33.0 |
| Aizu | 812 | 32.6 |
| Minami-aizu | 80 | 32.8 |
| Outside <br> Fukushima | 102 | 33.6 |
| Total | 7,048 | 33.5 |

Weight (Singleton pregnancy)
Mean (g) $\pm$ SD ( n )

| Area | Total |  | Male |  | Female |  | No response |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

The denominator is the sum of valid responses (i.e., Respondents who answered the question)
Proportion does not total to $100 \%$ because of multiple answers.

## 3. Free-answer questions

The participants are 867 of 7,214 valid responses who answered the free-answer question.

| Opinion about the survey | 146 | 16.8\% |
| :---: | :---: | :---: |
| Other | 118 | 13.6\% |
| Effects of radiation on fetus and child | 112 | 12.9\% |
| Physical problems** | 97 | 11.2\% |
| Consultation of child rearing** | 92 | 10.6\% |
| Request for information on radiation and research results | 80 | 9.2\% |
| Request for adequate medical service and physical care | 66 | 7.6\% |
| Mental illness | 64 | 7.4\% |
| Effects of radiation on food or baby food | 61 | 7.0\% |
| Anxiety over the effects of radiation on water | 53 | 6.1\% |
| Request for adequate child support services | 47 | 5.4\% |
| Anxiety about radiation exposure of children when outside | 43 | 5.0\% |
| Anxiety and dissatisfaction about inadequate medical services | 43 | 5.0\% |
| Positive comments about this survey | 35 | 4.0\% |
| Anxiety and dissatisfaction about reliability or lack of information | 28 | 3.2\% |
| Request for the overall examination | 28 | 3.2\% |
| Request for decontamination and provision of safe playgrounds | 23 | 2.7\% |
| Relationships*** | 22 | 2.5\% |
| Issues related to the current pregnancy outcome | 21 | 2.4\% |
| Effects of radiation on breast milk or infant formula | 20 | 2.3\% |
| Anxiety and dissatisfaction about evacuation and family living apart | 19 | 2.2\% |
| Regarding financial anxiety and burden | 19 | 2.2\% |
| Request for Thyroid Ultrasound Examination | 13 | 1.5\% |
| Request for financial support | 12 | 1.4\% |
| Request to measure internal radiation exposure (by whole body counter, etc.) | 9 | 1.0\% |
| Request for adequate mental health care services | 9 | 1.0\% |
| Anxiety about the effects of radiation on the next pregnancy | 8 | 0.9\% |
| Request for medical check-up and examinations | 8 | 0.9\% |
| Request for test on breast milk | 6 | 0.7\% |
| Request for Fukushima Health Management Survey | 4 | 0.5\% |
| Regarding external radiation exposure (provision of glass badges and dosimeters) | 4 | 0.5\% |
| Request for support for supplies and gasoline | 3 | 0.3\% |
| Request for evacuation support | 2 | 0.2\% |

The denominator is the sum of 867 of respondents. Multiple answers allowed
** Issue not mentioned in FY 2011survey
*** Issue not mentioned in FY 2012survey

## 4. Support

The number of those who required support in FY 2013 is 1,101 of 7,260 respondents $(15.2 \%)$.
The results of responses received from 24 December 2013 through 26 December 2014

Number of respondents required support

| Area | Participants | Response |  | Number of respondents who required support |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Kempoku | 3,637 | 1,936 | 53.2\% | 288 | 14.9\% |
| Kenchu | 4,453 | 1,982 | 44.5\% | 297 | 15.0\% |
| Kennan | 1,213 | 588 | 48.5\% | 91 | 15.5\% |
| Soso | 1,178 | 535 | 45.4\% | 89 | 16.6\% |
| Iwaki | 2,649 | 1,195 | 45.1\% | 173 | 14.5\% |
| Aizu | 1,816 | 833 | 45.9\% | 123 | 14.8\% |
| Minami-aizu | 162 | 83 | 51.2\% | 17 | 20.5\% |
| Outside <br> Fukushima | 110 | 108 | 98.2\% | 23 | 21.3\% |
| Total | 15,218 | 7,260 | 47.7\% | 1,101 | 15.2\% |

The denominator of response is the number of participants.
The denominator of number of respondents who required support is the number of response.

Respondents requiring support by area

| Area | Support required based on the categories of depression |  | Support required based on the free-answer questions |  | Number of respondents who required support |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Kempoku | 202 | 70.1\% | 86 | 29.9\% | 288 | 100.0\% |

The denominator is the sum of valid response. Proportion does not total to $100 \%$ because of multiple answers.
A: We listened and dealt with the issues of respondents.
B: Respondents were given information about counseling services
C: Respondents who were confirmed to have visited clinics for consultation.
D: We answered to respondents' questions.
E: Respondents were recommended to receive medical treatment.
F: Respondents were referred to clinical psychologists.
G: Respondents were connected to municipal governments.
H: Respondents were connected to a radiation consultation office.
I: Specialists answered to the respondents' questions.
