# Report of Third-Round Thyroid Ultrasound Examinations (Second Full-Scale Thyroid Screening Program) 

Reported on 5 September 2018

## 1. Summary

### 1.1 Purpose

In order to monitor the long-term health of children, we are now engaged in the second Full-scale Thyroid Screening Program (third-round examination). The first round was Preliminary Baseline Screening for initial assessment of thyroid glands, and the second round was the first Full-scale Thyroid Screening Program to assess any changes.

### 1.2 Group

In addition to the participants of Preliminary Baseline Screening (Fukushima residents born between 2 April 1992 and 1 April 2011), the Full-scale Thyroid Screening (from the second-round examination) also includes those who were born between 2 April 2011 and 1 April 2012.

### 1.3 Implementation Period

The Second Full-scale Screening Program started 1 May 2016 and will cover examinees up to age 20 on a municipality-by-municipality schedule to FY 2017. Thereafter, we will revise the schedule to screen examinees every five years - at ages $25,30,35$, etc. - to make it easier for examinees to remember when they are due for examination. In transition, examinations will be scheduled to avoid intervals greater than 5 years between examinations.

### 1.4 Responsible Organizations

Fukushima Prefecture commissioned Fukushima Medical University (FMU) to conduct the survey in cooperation with institutions inside and outside Fukushima (the number of contracts is as of 30 June 2018).

| 1.4-1 Primary examination |  |
| :--- | :---: |
| Inside Fukushima Prefecture | 69 medical institutions |
| Outside Fukushima Prefecture | 114 medical institutions |

## 1.4-2 Confirmatory examination

Inside Fukushima Prefecture 5 medical institutions including FMU
Outside Fukushima Prefecture $\quad 36$ medical institutions

### 1.5 Method

## 1.5-1 Primary Examination

We use ultrasonography for examination of the thyroid gland.
Assessments are made by specialists on the basis of the following criteria:
-Diagnostic Criteria (A)

Those with A1 and A2 test results are recommended for watchful waiting until they undergo the primary examination, starting from April 2018.

## A1: No nodules / cysts

A2: Nodules $\leq 5.0 \mathrm{~mm}$ or cysts $\leq 20.0 \mathrm{~mm}$
-Diagnostic Criteria (B)
Those with B test results are advised to take the confirmatory examination.
B: Nodules $\geq 5.1 \mathrm{~mm}$ or cysts $\geq 20.1 \mathrm{~mm}$
Some A2 test results may be re-classified as B results when clinically indicated.

## -Diagnostic Criteria (C)

Those with C test results are advised to take the confirmatory examination.
C: Immediate need for confirmatory examination.

## 1.5-2 Confirmatory Examination

We conduct ultrasonography, blood test, urine test, and Fine-Needle Aspiration Cytology (FNAC) if needed for those with B or C test results. Priority is given to those in urgent clinical need.

We recommend medical follow-up for those requiring it due to confirmatory test results.

## 2. Results as of 30 June 2018

### 2.1 Results of Primary Examination

## 2.1-1 Progress Report

The Primary Examination started 1 May 2016 targeted at 336,669 people in 59 municipalities ( 25 municipalities in FY2016 and 34 municipalities in FY2017) and so far carried out for 217,506 people ( $64.6 \%$ ). (Examination status for each municipality and that of prefectures other than Fukushima are as in Appendix 1 and Appendix 2)
Results have been confirmed for 217,472 participants ( $100.0 \%$ ) and results notifications have been dispatched accordingly. (The result for each municipality is as Appendix 3)

Thusfar, $215,990(99.3 \%)$ were classified as A (A1 or A2), $1,482(0.7 \%)$ were B, and none was C.

|  | Survey population$\qquad$ | Participants |  | Proportion (\%) <br> c (c/b) | Test results |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Proportion (\%) | Screened outside Fukushima |  | Class (\%) |  |  |  |
|  |  |  |  |  | A |  | Requiring confirmatory test |  |
|  |  | b (b/a) |  |  | A1 d (d/c) | A2 e (e/c) | B f (f/c) | C g (g/c) |
| FY 2016 | 191,875 | 126,166 (65.8) | 8,867 | 126,154 (100.0) | 43,929 (34.8) | 81,430 (64.5) | 795 (0.6) | $0 \quad(0.0)$ |
| FY 2017 | 144,794 | 91,340 (63.1) | 3,563 | 91,318 (100.0) | 32,291 (35.4) | 58,340 (63.9) | 687 (0.8) | $0 \quad(0.0)$ |
| Total | 336,669 | 217,506 (64.6) | 12,430 | 217,472 (100.0) | 76,220 (35.0) | 139,770 (64.3) | 1,482 (0.7) | $0 \quad(0.0)$ |

Table 2. Number and proportion with nodules/cysts
as of 30 June 2018

|  | Number of confirmed screening results | Number and proportion of children with nodules/cysts |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Nodules |  | Cysts |  |
|  |  | $\begin{gathered} \geq 5.1 \mathrm{~mm} \\ \text { b (b/a) } \\ \hline \end{gathered}$ | $\begin{gathered} \leq 5.0 \mathrm{~mm} \\ \text { c (c/a) } \end{gathered}$ | $\begin{gathered} \geq 20.1 \mathrm{~mm} \\ \mathrm{~d}(\mathrm{~d} / \mathrm{a}) \end{gathered}$ | $\begin{gathered} \leq 20.0 \mathrm{~mm} \\ \text { e (e/a) } \\ \hline \end{gathered}$ |
| FY 2016 | 126,154 | 795 (0.6) | 426 (0.3) | 0 (0.0) | 81,809 (64.8) |
| FY 2017 | 91,318 | 684 (0.7) | 395 (0.4) | 3 (0.0) | 58,638 (64.2) |
| Total | 217,472 | 1,479 (0.7) | 821 (0.4) | 3 (0.0) | 140,447 (64.6) |

-Ratios are rounded to the $1^{\text {st }}$ decimal place. This also applies to other tables and annexes.
The examination participants in FY2016 and FY 2017 are those examined during 2-year intervals until they are older than 20 years old, whereas
those who receive examination at 5-year intervals (birth year FY1992, 1993) are excluded.
-The results of examinations with 5-year intervals will be shown separately. Target people born in $1992(22,000)$ will be examined in FY 2017, target people born in $1993(22,000)$ in FY2018.

## 2.1-2 Participation rates by age group

Participation rate of age group 18 or older (age as of 1 April 2016) in target municipalities for FY 2016 was $16.7 \%$.
Participation rate of age group 18 or older (age as of 1 April 2017) in target municipalities for FY 2017 was $16.1 \%$.

Table 3. Participation rates in target municipalities by age group
As of 30 June 2018

|  |  | Total | Age group (years) |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| FY 2016 target municipalities | Age group (years) |  | 4-7 | 8-12 | 13-17 | 18-23 |
|  | Survey population (a) | 191,875 | 36,619 | 51,003 | 56,840 | 47,413 |
|  | Participants (b) | 126,166 | 26,424 | 45,553 | 46,267 | 7,922 |
|  | Proportion (\%) (b/a) | 65.8 | 72.2 | 89.3 | 81.4 | 16.7 |
| FY 2017 target municipalities | Age group (years) |  | 5-7 | 8-12 | 13-17 | 18-24 |
|  | Survey population (a) | 144,794 | 19,316 | 37,166 | 41,995 | 46,317 |
|  | Participants (b) | 91,340 | 14,957 | 33,948 | 34,966 | 7,469 |
|  | Proportion (\%) (b/a) | 63.1 | 77.4 | 91.3 | 83.3 | 16.1 |
| Total | Survey population (a) | 336,669 | 55,935 | 88,169 | 98,835 | 93,730 |
|  | Participants (b) | 217,506 | 41,381 | 79,501 | 81,233 | 15,391 |
|  | Proportion (\%) (b/a) | 64.6 | 74.0 | 90.2 | 82.2 | 16.4 |

Age groups were formed with the age as of 1 April of each Fiscal Year.

## 2.1-3 Comparison of Full-scale Thyroid Screenings

Comparison of Third- and Second- Round Examination results of those who participated in both is as shown in table 4.

Among 201,288 participants who were diagnosed as A1 or A2 in the Second-Round Examination, 200,596 ( $99.7 \%$ ) had A1 or A2 results, and $692(0.3 \%)$ were diagnosed as B in the Third-Round Examination Program.
Among 1,136 participants who were diagnosed as B in the Second-Round Examination, 438 (38.6\%) had A1 or A2 results, and 698 ( $61.4 \%$ ) were diagnosed as B in the Third-Round Examination Program.
Table 4. Comparison of Full-scale Thyroid Screenings
As of 30 June 2018

[^0]*2 Upper figures are the breakdowns of Third-Round Examination against Second-Round results. Lower figures are the ratios(\%).

### 2.2 Results of Confirmatory Examination

## 2.2-1 Progress Report

Confirmatory Examinations have been conducted since October 2016 and so far 913 of 1,482 people ( $61.6 \%$ ) have received the examination. Of those, $826(90.5 \%)$ have completed. (Examination status of each region is as in Appendix 5)

Of the foregoing 826 participants, 86 ( 7 of A1 and 79 of A 2 results, $10.4 \%$ ) were confirmed to meet A1 or A2 diagnostic criteria by the Primary Examination standards (including those with other thyroid conditions). Remaining 740 ( $89.6 \%$ ) people were confirmed to be outside of A1/A2 criteria.

Table 5. Confirmatory testing coverage and results
As of 30 June 2018

|  | Number of those requiring confirmat ory test <br> a | Participants <br> Proportion (\%) <br> b (b/a) | Confirmatory test coverage (\%)$\mathbf{c}(\mathbf{c} / \mathrm{b})$ | Confirmed test results |  | Follow-up advised |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  |  |
|  |  |  |  | $\mathbf{d}(\mathbf{d} / \mathbf{c})$ | e (e/c) | f (f/c) | $\begin{aligned} & \text { Cytology } \\ & \mathrm{g}(\mathrm{~g} / \mathrm{f}) \end{aligned}$ |
| FY 2016 | 795 | 579 (72.8) | 547 (94.5) | 5 (0.9) | 52 (9.5) | 490 (89.6) | 31 (6.3) |
| FY 2017 | 687 | 334 (48.6) | 279 (83.5) | 2 (0.7) | 27 (9.7) | 250 (89.6) | 14 (5.6) |
| Total | 1,482 | 913 (61.6) | 826 (90.5) | 7 (0.8) | 79 (9.6) | 740 (89.6) | 45 (6.1) |

## 2.2-2 Results of Fine Needle Aspiration Biopsy and Cytology (FNAC)

Among those who underwent FNAC, 15 had nodules classified as suspicious or malignant.
8 of them were male, and 7 were female. Age at the time of the confirmatory testing ranged from 12 to 23 years (mean age: $17.1 \pm 2.8$ years). The minimum and maximum tumor diameters were 5.6 and 33.0 mm . Mean tumor diameter was $14.4 \pm 7.7 \mathrm{~mm}$.

Results from the full-scale examination (the second-round examination) of the 15 people showed that 8 were A (2 were A1 and 6 were A2), 4 were B and three have not yet had the examination.

Table 6. Results of FNAC
Target municipalities in FY 2016

| Suspicious or malignant | $\left.11^{*}\right)$ |
| :--- | :--- |
| Male to female ratio | $6: 5$ |

Target municipalities in FY 2017

| Suspicious or malignant | $4 *)$ |
| :--- | :--- |
| Male to female ratio | $2: 2$ |

## Total

| Suspicious or malignant | $15 *)$ |
| :--- | :--- |
| Male to female ratio | $8: 7$ |
| Mean age (SD, min-max) | $17.1(2.8,12-23), 10.9(2.6,6-16)$ at the time of the disaster |
| Mean tumor size | $14.4 \mathrm{~mm}(7.7 \mathrm{~mm}, 5.6-33.0 \mathrm{~mm})$ |

*) Surgical cases are as shown in Appendix 6.
2.2-3 Age distribution of malignant or suspicious cases by FNAC

Age distributions of 15 people classified as malignant or suspicious with their age as of 11 March 2011 is as Table 3 , with their age as of confirmatory examination is as Table 4.

Fig. 3 Age as of 11 March 2011

Fig. 4 Age as of the date of confirmatory examination

2.2-4 The results of Basic Survey of those who classified as malignant or suspicious cases by FNAC
$5(33.3 \%)$ of the 15 people participated in the Basic Survey (radiation dose estimates), and 5 received the results. The highest effective dose documented was 1.5 mSv .
Table 7. A breakdown of dose estimates for participants of the Basic Survey
As of 30 June 2018

| Effective dose (mSv) | Age at the time of the disaster |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 0-5 |  | 6-10 |  | 11-15 |  | 16-18 |  | Total |  |
|  | Male | Female | Male | Female | Male | Female | Male | Female | Male | Female |
| $<1$ | 0 | 0 | 0 | 0 | 0 | 1 | 0 | 0 | 0 | 1 |
| 1-1.9 | 0 | 0 | 1 | 1 | 1 | 1 | 0 | 0 | 2 | 2 |
| 2-4.9 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 5-9.9 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 10-19.9 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| $\geq 20$ | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| Total | 0 | 0 | 1 | 1 | 1 | 2 | 0 | 0 | 2 | 3 |

- Estimates are based on effective external radiation doses.

2.2-5 Blood and urinary iodine test results as of 30 June 2018
Table 8. Blood test results

|  | Mean $\pm$ SD (Abnormal value) |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | FT4 1) <br> $(\mathrm{ng} / \mathrm{dL})$ | FT3 2) <br> $(\mathrm{pg} / \mathrm{mL})$ | TSH 3) <br> $(\mu \mathrm{IU} / \mathrm{mL})$ | Tg 4) <br> $(\mathrm{ng} / \mathrm{mL})$ | $\mathrm{TgAb} 5)$ <br> $(\mathrm{IU} / \mathrm{mL})$ | TPOAb 6) <br> $(\mathrm{IU} / \mathrm{mL})$ |
| Reference Range | $0.95-1.747)$ | $2.13-4.077)$ | $0.340-3.8807)$ | $\leq 33.7$ | $<28.0$ | $<16.0$ |
| 15 suspicious or malignant | $1.2 \pm 0.1(0.0 \%)$ | $3.5 \pm 0.7(20.0 \%)$ | $1.7 \pm 1.1(20.0 \%)$ | $31.5 \pm 43.2(33.3 \%)$ | $-(20.0 \%)$ | $-(13.3 \%)$ |
| Other 786 | $1.2 \pm 0.2(5.3 \%)$ | $3.6 \pm 0.5(6.2 \%)$ | $1.2 \pm 0.8(9.3 \%)$ | $25.2 \pm 61.3(13.9 \%)$ | $-(8.3 \%)$ | $-(14.4 \%)$ |

1) FT4: Free Thyroxine; thyroid hormone binding 4 iodines; higher among patients with thyrotoxicosis (such as Graves' disease) and lower with hypothyroidism (such as Hashimoto's thyroiditis).
2) FT3: Free Triiodothyronine; thyroid hormone binding 3 iodines; higher among patients with thyrotoxicosis (such as Graves' disease) and lower with hypothyroidism (such as Hashimoto's thyroiditis).
3) TSH: Thyroid Stimulating Hormone; higher among patients with Hashimoto's disease and lower with Graves' disease.
4) Tg: Thyroglobulin; higher when thyroid tissue is destroyed or when neoplastic tissue produces thyroglobulin.
5) $\operatorname{TgAb}$ : Anti-Thyroglobulin Antibody; higher among patients with Hashimoto's disease and Graves' disease.
6) TPOAb: Anti-Thyroid Peroxidase Antibody; higher among patients with Hashimoto's disease or Graves' disease.
7) Reference interval varies according to age.

## 2.2-6 Confirmatory test results by area as of 30 June 2018

The proportion of malignancy or suspicious of malignancy was $0.01 \%$ in 13 municipalities in the nationally designated evacuation zones, Nakadori and Aizu, $0.00 \%$ in Hamadori.

Table 10 Confirmatory test results by area

|  | Number of those screened | Participants who required confirmatory test | Proportion who required confirmatory test (\%)* | Number who underwent confirmatory test | Suspicious or malignant cases | Proportion of suspicious or malignant cases (\%) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 13 municipalities 1) | 27,037 | 211 | 0.8 | 151 | 4 | 0.01 |

### 2.3 Mental Health Care

## 2.3-1 Support for participants of primary examination

Since July 2015, we offer person-to-person explanations to participants at public venues where primary examinations take place. After the examination, medical doctors explain the results showing the ultrasound image in private consultation booths at the venue. As of 30 June $2018,27,582(84.8 \%)$ of 32,535 participants visited the consultation booths. In case the booths cannot be set up at school, alternatives such as briefing sessions at schools and telephonic supports are offered.
※ The number of those who used the consultation booths includes participants receiving the second round.

## 2.3-2 Support for participants of confirmatory examination

We have set up a support team for participants of the confirmatory examination within Fukushima Medical University to address their anxiety and concerns, as well as online support for $\mathrm{Q} \& \mathrm{~A}$ and counseling.

Since the start of full-scale thyroid screening, 1,149 participants ( 403 males and 746 females) have received support as of 30 June 2018. The number of supports provided was 2,353 in total. Of these, $1,316(55.9 \%)$ received support at their first examination and 979 (41.6\%) at subsequent examination (includes 132 ( $5.6 \%$ ) at FNAC) - and $58(2.5 \%)$ at informed consent.

In cooperation with teams of medical staff at hospitals, we offer similar services to those who moved on to the health insurance medical care.
※ The number of those who used the consultation booths at Confirmatory Examination includes participants receiving the examination second time.

Appendix 1

Thyroid ultrasound examination (TUE) coverage by municipality

| Survey population | Participants |  | Proportion <br> (\%) | Number and proportion*2 of participants by age group |  |  |  |

*1) The number of participants examined at facilities outside Fukushima or by teams dispatched from FMU (as of 31 May 2018)
*2) The upper layer shows number of participants, lower shows proportion of each group
*3) Number of participants who are registered as residents outside of Fukushima.
Age groups were formed based on the age at the full-scale screening (third-round examination). This applies to other tables as well.

## Appendix 2

Thyroid ultrasound examination (TUE) coverage by prefecture

| Prefecture | Number of <br> test venues | Participants <br> $*$ |
| :---: | ---: | ---: |
| Hokkaido | 7 | $\mathbf{3 5 4}$ |
| Aomori | 1 | $\mathbf{1 4 3}$ |
| Iwate | 3 | $\mathbf{3 0 6}$ |
| Miyagi | 2 | $\mathbf{2 , 5 4 1}$ |
| Akita | 1 | $\mathbf{1 8 3}$ |
| Yamagata | 3 | $\mathbf{5 9 4}$ |
| Ibaraki | 4 | $\mathbf{7 6 5}$ |
| Tochigi | 7 | $\mathbf{7 5 0}$ |
| Gunma | 2 | $\mathbf{2 3 3}$ |
| Saitama | 3 | $\mathbf{5 8 1}$ |
| Chiba | 4 | $\mathbf{5 4 4}$ |
| Tokyo | 14 | $\mathbf{2 , 1 0 9}$ |

## Appendix 6

Surgical cases for malignancy or suspicion of malignancy

1. Target municipalities in FY 2016

Suspicious or malignant: 11 (10 surgical cases: 10 papillary thyroid carcinomas)
2. Target municipalities in FY 2017

Suspicious or malignant: 4 ( 1 surgical case: 1 papillary thyroid carcinomas)
3. Total for cases FY 2016-2017

Suspicious or malignant: 15 (11 surgical cases: 11 papillary thyroid carcinomas)

## Report of Fourth -Round Thyroid Ultrasound Examinations (Third Full-Scale Thyroid Screening Program)

Reported on 5 September 2018

## 1. Summary

### 1.1 Purpose

In order to monitor the long-term health of children, following the Preliminary Baseline Screening for background assessment of thyroid glands, and Full-scale Thyroid Screening (the Second and Third round examination) to continuously confirm the status of thyroid glands, now we conduct the Full-scale Thyroid Screening Program (Fourth-round examination).

### 1.2 Group

All the Fukushima residents approximately 18 years old or younger at the time of earthquake (born between 2 April 1992 and 1 April 2012).

### 1.3 Implementation Period

From April 2018 (schedule of FY 2018 and FY 2019):
1.3-1 targets 18 years old or younger

The examination will be carried out for each municipality in FY 2018 and FY 2019.

## 1.3-2 targets 19 years old or older

The examination will be carried out for each age (school grade).
FY 2018: those who were born in FY 1996 and FY 1998
FY 2019: those who were born in FY 1997 and FY 1999

## 1.3-3 targets of the examination at age 25

For those who are older than 20, examination will be carried out with 5 years interval.
FY 2018: those who were born in FY 1993
FY 2019: those who were born in FY 1994
The results of these examinations will be reported separately.

### 1.4 Responsible Organizations

Fukushima Prefecture commissioned Fukushima Medical University (FMU) to conduct the survey in cooperation with medical institutions inside and outside Fukushima (the number of contracts is as of 30 June 2018).
1.4-1 Primary examination
Inside Fukushima Prefecture
69 medical institutions
Outside Fukushima Prefecture
114 medical institutions
1.4-2 Confirmatory examination
Inside Fukushima Prefecture
Outside Fukushima Prefecture
1.5 Method
1.5-1 Primary Examination

We use ultrasonography for examination of the thyroid gland.
Assessments are made by specialists on the basis of the following criteria:
-Diagnostic Criteria (A)
A1: No nodules / cysts
A2: Nodules $\leq 5.0 \mathrm{~mm}$ or cysts $\leq 20.0 \mathrm{~mm}$
-Diagnostic Criteria (B)
B: Nodules $\geq 5.1 \mathrm{~mm}$ or cysts $\geq 20.1 \mathrm{~mm}$
Some A2 test results may be re-classified as B results when clinically indicated.
-Diagnostic Criteria (C)
C : Immediate need for confirmatory examination.

## 1.5-2 Confirmatory Examination

We conduct ultrasonography, blood test, urine test, and Fine-Needle Aspiration Cytology (FNAC) if needed for those with B or C test results. Priority is given to those in urgent clinical need.
We recommend medical follow-up for those requiring it due to confirmatory test results.
1.5-3 Flow chart

Fig. 1 Flow chart

### 1.6 Target Municipalities

The target municipalities for FY 2018 and FY 2019 are as follows (targets 18 years old or younger):

Fig. 2 Target Municipalities

## 2. Results as of 30 June 2018

### 2.1 Results of Primary Examination

## 2.1-1 Progress Report

The examination was carried out for 16,362 ( $5.6 \%$ ) participants by 30 June 2018 (examination status for each municipality and prefectures other than Fukushima are shown in Appendix 1 and Appendix 2).

Results have been confirmed for 953 participants (5.8\%) and results notifications have been dispatched accordingly (the result for each municipality is shown as Appendix 3).
Thusfar, 945 ( $99.2 \%$ ) were classified as A (A1 or A2), 8 ( $0.8 \%$ ) were B, and none was C.

Table 2. Number and proportion with nodules/cysts
as of 30 June 2018

|  | Number of confirmed screening results$\mathbf{a}$ | Number and proportion of children with nodules/cysts |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Nodules |  | Cysts |  |
|  |  | $\begin{gathered} \geq 5.1 \mathrm{~mm} \\ \mathrm{~b}(\mathrm{~b} / \mathrm{a}) \\ \hline \end{gathered}$ | $\begin{gathered} \leq 5.0 \mathrm{~mm} \\ \mathrm{c}(\mathrm{c} / \mathrm{a}) \\ \hline \end{gathered}$ | $\begin{gathered} \geq 20.1 \mathrm{~mm} \\ \mathrm{~d}(\mathrm{~d} / \mathrm{a}) \\ \hline \end{gathered}$ | $\begin{gathered} \leq 20.0 \mathrm{~mm} \\ \text { e (e/a) } \\ \hline \end{gathered}$ |
| FY 2018 | 881 | 7 (0.8) | 11 (1.2) | 0 (0.0) | 586 (66.5) |
| FY 2019 | 72 | 1 (1.4) | 0 (0.0) | 0 (0.0) | 52 (72.2) |
| Total | 953 | 8 (0.8) | 11 (1.2) | 0 (0.0) | 638 (66.9) |

- Decimal figures are rounded at lower decimal place and this applies to other tables as well.

Those who receive examination at 5-year intervals (birth year FY1992 to 1995) are excluded. The results of examinations with 5-year intervals will be shown separately.

OThe examination for the targets born in FY 1992 (approx. 22,000) are in FY 2017, for the targets born in FY 1993 (approx. 22,000) are in FY 2018, for the targets born in FY 1994 (approx. 22,000) will be in FY 2019 and for the targets born in FY 1995 (approx. 21,000) will be in FY 2020.

## 2.1-2 Participation rates by age group

The participation rate for each age group as of 1 April of each year is as Table 3.
Table 3. Participation rates in target municipalities by age group
As of 30 June 2018

|  |  | Total | Age group (years) |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| FY 2018 target municipalities | Age group (years) |  | 6-11 | 12-17 | 18-24 |
|  | Survey population (a) | 167,756 | 56,662 | 64,829 | 46,265 |
|  | Participants (b) | 15,834 | 8,817 | 6,489 | 528 |
|  | Proportion (\%) (b/a) | 9.4 | 15.6 | 10.0 | 1.1 |
| FY 2019 target municipalities | Age group (years) |  | 7-11 | 12-17 | 18-24 |
|  | Survey population (a) | 126,094 | 34,092 | 47,275 | 44,727 |
|  | Participants (b) | 528 | 157 | 190 | 181 |
|  | Proportion (\%) (b/a) | 0.4 | 0.5 | 0.4 | 0.4 |
| Total | Survey population (a) | 293,850 | 90,754 | 112,104 | 90,992 |
|  | Participants (b) | 16,362 | 8,974 | 6,679 | 709 |
|  | Proportion (\%) (b/a) | 5.6 | 9.9 | 6.0 | 0.8 |

Age groups were formed with the age as of 1 April of each Fiscal Year.

## 2.1-3 Comparison of Full-scale Thyroid Screenings

Comparison of Fourth- and Third- Round Examination results of those who participated in both is as shown in table 4.

Among 854 participants who were classified as A1 or A2 in the Third-Round Examination, 851 (99.6\%) had A1 or A2 results, and 3 ( $0.4 \%$ ) were classified as B in the Fourth-Round Examination Program.
Among 6 participants who were classified as B in the Third-Round Examination, 3 ( $50.0 \%$ ) had A1 or A2 results, and 3 ( $50.0 \%$ ) were classified as B in the Fourth-Round Examination Program.

Table 4. Comparison of Full-scale Thyroid Screenings
As of 30 June 2018

[^1]
### 2.2 Mental Health Care

As mental care for participants, we provide the following supports.
2.2-1 Support for participants of primary examination

After the examination, medical doctors explain the results showing the ultrasound image in private consultation booths at the venue. As of 30 June 2018, 194 ( $100 \%$ ) of 194 participants visited the consultation booths.

## 2.2-2 Briefing Sessions

To help participants or their parents improve their understanding of the thyroid examination, briefing sessions were carried out. Since April 2018, 137 people in 8 venues participated in the briefing sessions as of 30 June 2018.

Appendix 1
Thyroid ultrasound examination (TUE) coverage by municipality

*1) The number of participants examined at facilities outside Fukushima or by teams dispatched from FMU (as of 31 May 2018)
*2) The upper layer shows number of participants, lower shows proportion of each group
*3) Number of participants who are registered as residents outside of Fukushima.

- Age groups were formed based on the age at the full-scale screening (fourth-round examination). This applies to other tables hereafter.

| Survey population <br> a | Participants |  | Proportion <br> (\%) | Number and proportion*2 of participants by age group |  |  |

# Outline of Mental Health and Lifestyle Survey for FY 2016 <br> <br> (Revised version) 

 <br> <br> (Revised version)}

Reported on June 2018

## 1. Purpose

The Great East Japan Earthquake on 11 March 2011 and the following accident at the Fukushima Daiichi Nuclear Power Plant brought the residents of Fukushima Prefecture psychological distress or post-traumatic stress disorder (PTSD) caused by anxiety about radiation, evacuation, loss of property, and fearful experiences. The survey started in FY 2011 to understand the residents' mental health and lifestyle, and provide them with appropriate care.

Based on the understanding gained from the results of the Mental Health and Lifestyle Survey for FY 2011-2015, we will continue watching for changes of mental health and lifestyle among residents, and offer care when necessary.

## 2. Methods

## 2-1 Target Groups

- Those who were registered as residents of municipalities designated as evacuation zones from 11 March 2011 till 1 April 2012. Note that these people remain as the target group even after their departure from the designated evacuation zones.
- Those who were registered as residents of municipalities designated as evacuation zones as of 1 April 2016.
- Those as deemed necessary based on Basic Survey results, even if the above conditions are not met.
208,044 (As of 31 October 2017)
〔Designated evacuation zones〕
Hirono, Naraha, Tomioka, Kawauchi, Okuma, Futaba, Namie, Katsurao, Iitate, Minami-soma, Tamura, Kawamata, and the part of Date (specifically recommended for evacuation).
Ages 0-3 Survey: 3,668 individuals born from 2 April 2013 to 1 April 2016
Ages 4-6 Survey: 4,194 individuals born from 2 April 2010 to 1 April 2013
Primary School Survey:
Middle School Survey:
Adults Survey :
10,479 individuals born from 2 April 2004 to 1 April 2010
5,837 individuals born from 2 April 2001 to 1 April 2004
183,866 individuals born before 1 April 2001

## 2-2 Survey Methods

Survey sheets (self-administered or completed by parents) were mailed to the participants.

## 2-3 Data Tabulation Period

Data tabulation period was from 2 February 2017 through 31 October 2017.

## 2-4 Number of Respondents and Valid Responses

The numbers of respondents (response rates) were as follows: 798 (21.8\%) for the ages 0-3 survey; $889(21.2 \%)$ for the ages $4-6$ survey; $2,231(21.3 \%)$ for the primary school survey; 1,002 (17.2\%) for the middle school survey; and 37,530 (20.4\%) for adults survey.

The numbers of valid responses (valid response rates) were as follows: 798 (21.8\%) for the ages 0-3 survey; 889 ( $21.2 \%$ ) for the ages $4-6$ survey; 2,209 ( $21.1 \%$ ) for the primary school survey; 1,002 $(17.2 \%)$ for the middle school survey; and 37,466 (20.4\%) for adults survey.

The results were tabulated by item for each question, as shown in the report. Due to some unreported items, the total may not match the aforementioned valid responses. Since the proportions in the report are rounded, there are instances where the total does not add up to $100 \%$.

## 3. Results

## 3-1 Age 0-3 years

- Of 3,668 people in the Target Group, 798 (21.8\%) valid responses received.
- Regarding the health conditions, $99.4 \%$ of responses indicated no particular issues ('very good', 'good', 'normal'), which showed a slight increase from the results of FY 2015 ( $98.7 \%$ ).
- The average sleep was 9 hours and 53 minutes and the average nap was 1 hour and 54 minutes, which are at the same level as the results of FY 2015 survey (average sleep: 9 hours and 52 minutes, average nap: 1 hour and 56 minutes), and also not significantly different from another major survey result ${ }^{1)}$ (10 hours and 7 minutes) aimed at younger children in daycare (3-year-old) .

## 3-2 Age 4-6 years

- Of 4,194 people in the Target Group, 889 ( $21.2 \%$ ) valid responses received.
- Regarding the health conditions, $99.5 \%$ of responses indicated no particular issues ('very good', 'good', 'normal'), which was almost the same as the FY 2015 survey (99.1\%).
- Regarding exercise habits, $3.5 \%$ responded "almost no exercise on a daily basis", showing a decrease from FY2015 (4.6\%).
- Average sleep was 9 hours and 37 minutes, and average nap was 1 hour and 33 minutes which are in the same levels as FY2015 (average sleep: 9 hours and 40 minutes; average nap: 1 hour and 30 minutes), also not significantly different from national survey results ${ }^{1)}$ ( 9 hours and 55 minutes) aimed at older children in daycare (5 year-old).
- In the survey on children's emotions and behavior (SDQ Japanese Edition), $11.1 \%$ of the 888 valid responses scored 16 or higher, which is the threshold score from the preceding study, and $3.9 \%$ scored 20 or higher, which is the initial support standard. Compared to the FY 2015 survey ( $10.8 \%$ scoring 16 or higher, $3.2 \%$ scoring 20 or higher), proportion at 16 or higher remained the same, while 20 or higher showed a slight trend of increase.

Tabulating the results by gender, for boys, of the 432 valid respondents, $13.0 \%$ scored 16 or higher, and $4.6 \%$ scored 20 or higher, showing a slight trend of increase compared to FY 2015 (16 or higher $12.5 \%, 20$ or higher $3.8 \%$ ). For girls, of the 456 valid respondents, $9.4 \%$ scored 16 or higher, and $3.3 \%$ scored 20 or higher, compared to FY 2015 ( 16 or higher $9.1 \%, 20$ or higher $2.6 \%$ ), while the proportion at 16 or higher remained the same, 20 or higher showed a slight trend of increase.

As for the distribution of 16 or higher cases in locations at the time of research, within Fukushima was $10.4 \%$ of 710 valid responses, outside Fukushima was $14.0 \%$ of 178 valid responses. Compared to the FY2015 (in $10.9 \%$, out $10.5 \%$ ), proportions in Fukushima slightly decreased, while outside Fukushima showed a trend of increase.

## 3-3 Primary School

- Of 10,479 people in the Target Group, 2,209 (21.1\%) valid responses were received.
- Regarding the health conditions, $98.9 \%$ of responses indicated no particular issues ('very good', 'good', 'normal'), which was almost the same as the FY 2015 survey ( $98.7 \%$ ).
- Regarding the exercise habits, $32.8 \%$ of respondents answered that they rarely exercise outside of physical education, showed an increase from that of FY 2015 (30.5\%). Compared to the report from a national survey ${ }^{3)}$ in FY 2013, where the group that responded they occasionally or never exercise outside of physical education classes in school consisted of $11.8 \%$ of boys and $23.4 \%$ of girls, exercise habits are still insufficient.
- The average of sleep was 8 hours and 52 minutes, which was similar to that of FY 2015 survey ( 8 hours and 54 minutes), and was also almost the same as that in a national survey ${ }^{2}$ (boys: 9 hours and 00 minute, girls: 8 hours and 56 minutes).
- Regarding SDQ scores, of the 2,207 valid respondents, $12.6 \%$ scored 16 or higher and $4.6 \%$ scored 20 or higher. Compared to the FY 2015 survey ( $13.7 \%$ scoring 16 or higher, $5.7 \%$ scoring 20 or higher), both of the proportions of those scored 16 or higher and 20 or higher were on a decreasing trend.

Tabulating the results by gender, for boys, of the 1,109 valid responses, $15.0 \%$ scored 16 or higher, and $6.4 \%$ scored 20 or higher. Compared to the FY 2015 survey ( $15.8 \%$ scoring 16 or higher, $7.0 \%$ scoring 20 or higher), both of the proportions of those scored 16 or higher and 20 or higher were on a decreasing trend. Among the 1,098 valid responses for girls, $10.3 \%$ scored 16 or higher, and $2.8 \%$ scored 20 or higher. Compared to the FY 2015 survey ( $11.4 \%$ scoring 16 or higher, $4.3 \%$ scoring 20 or higher), both of the proportions of those scored 16 or higher and 20 or higher were on a decreasing trend.
As for the distribution of 16 or higher cases in locations at the time of research, within Fukushima was $12.0 \%$ of 1,681 valid responses, outside Fukushima was $14.8 \%$ of 526 valid responses. Compared to the FY2015 (in $12.5 \%$, out $17.1 \%$ ), both of the proportions in and out of Fukushima showed a trend of decrease.

## 3-4 Middle School

- Of 5,837 people in the Target Group, 1,002 ( $17.2 \%$ ) valid responses received.
- Regarding the health conditions, $96.9 \%$ of responses indicated no particular issues ('Very good', 'Good', 'Normal'), resulted in the same level as the FY 2015 ( $97.1 \%$ ) survey.
- Regarding the exercise habits, $30.8 \%$ responded that they rarely exercise outside of physical education, showed a slight increase from the FY 2015 survey ( $29.3 \%$ ).
- Average of sleep was 7 hours and 6 minutes, which was almost the same as the FY 2015 survey (7 hours and 7 minutes).
- Regarding the SDQ scores, of the 915 valid respondents, $12.3 \%$ scored 16 or higher and $4.9 \%$ scored 20 or higher. Compared to the FY 2015 survey ( $11.6 \%$ scored 16 or higher and $4.5 \%$ scored 20 or higher), the proportion of 16 or higher slightly increased while that of 20 or higher remained at the same level.
Tabulating the results by gender, for boys, of the 483 valid respondents, $13.7 \%$ scored 16 or higher, and $6.0 \%$ scored 20 or higher. Compared to the FY 2015 survey ( $11.6 \%$ scored 16 or higher and $4.6 \%$ scored 20 or higher), both proportions increased. Among the 432 valid responses for girls, $10.9 \%$ scored 16 or higher, and $3.7 \%$ scored 20 or higher. Compared to the FY 2015 survey ( $11.6 \%$ scoring 16 or higher, $4.5 \%$ scoring 20 or higher), both proportions slightly decreased.
As for the distribution of 16 or higher cases in locations as at the time of research, within Fukushima was $11.0 \%$ of 724 valid responses, outside Fukushima was $17.3 \%$ of 191 valid responses. Compared to the FY2015 (in $10.9 \%$, out $13.9 \%$ ), the proportion in Fukushima remained the same while out of Fukushima showed an increase trend

## General Summary of Children

- In regards to the exercise habits, the proportion of group that rarely exercises indicated an trend of increase.
- The average sleep was similar to the FY 2015 survey.
- The SDQ was used as an indicator to evaluate children's mental health. The percentage of people scoring 16 or higher on the SDQ was still higher for all groups compared to the percentage $(9.5 \%)$ in prior research on the general population in unaffected areas of Japan ${ }^{4}$. However, when compared to the FY 2015 survey, the trends appeared to vary by items of research, gender and locations.

## 3-5 Adults (people born on or before April 1, 2001)

## Mental Health

- Of 183,866 people in the Target Group, 37,466 (20.4\%) valid responses received.
- Regarding the health conditions, $83.0 \%$ of responses indicated no particular issues ('Very good', 'Good', 'Normal'), consistent with levels as the FY 2015 survey ( $82.9 \%$ ).
- Asked about their sleep, $60.7 \%$ of respondents were dissatisfied with their sleep, which is at the same level as the FY 2015 survey (60.5\%).
- Regarding the exercise habits, $42.2 \%$ of respondents rarely exercised, showing a slight decrease from the FY 2015 survey ( $42.7 \%$ ).
- The percentage of current smokers was $15.4 \%$, which was slightly lower than the FY 2015 survey ( $16.8 \%$ ). The percentage of current drinkers was $41.1 \%$, which was at the same level as the FY 2015 survey ( $41.0 \%$ ). However, the percentage of heavy drinkers (those who drink at least four drinks or more per day) was $8.2 \%$, which was similar to the FY 2015 survey ( $7.8 \%$ ). The proportion of heavy drinkers by gender, $17.1 \%$ for male, $9.2 \%$ for female, were at the same levels as FY 2015 survey (male: 17.2\%, female 9.0\%).
- Regarding the K6, $6.8 \%$ scored 13 or higher in the FY 2016 survey, remained at the same level as the FY 2015 survey (7.1\%). However this proportion in general region in Japan in normal time is reported to be $3.0 \%^{5)}$, indicating our results are still high. While $6.4 \%$ of males scored 13 or higher, $7.2 \%$ of females scored 13 or higher. The similar trend was observed in the FY 2015 survey. Separating the results by age groups, age groups of 20 s had the highest proportion of those scored 13 or higher $8.8 \%$, and age group of 60 s had the lowest ratio of $4.9 \%$. Compared to the FY 2015 survey, the proportion of 13 or higher increased in the 10 s age group, while it decreased in the 70s or older age group. Proportions remained the same in other age groups. As for the distribution of 13 or higher cases in locations at the time of research, within Fukushima was $6.4 \%$ of 26,975 valid responses, outside Fukushima was $9.4 \%$ of 4,662 valid responses, indicating that the results are at the same levels as the FY2015 (in $6.6 \%$, out $9.7 \%$ ).
- PCL-4, which is used to detect the trauma response, showed that $9.9 \%$ was above 12 points. While the proportion for males was $9.0 \%$, for females it was $10.7 \%$. Among age groups, 70 s was the highest at $15.5 \%$ while 10 s was the lowest at $3.0 \%$.
As for the distribution of PCL-4 12 or higher cases in locations at the time of research, within Fukushima was $9.6 \%$ of 25,746 valid responses, outside Fukushima was $11.7 \%$ of 4,517 .
- As for the recognition of radiation health effects, to the question about radiation health effects in later years such as cancers, $34.8 \%$ responded as "possibility is extremely low," $32.7 \%$ as "possibility is low," $18.5 \%$ as "possibility is high," and $14.0 \%$ as "possibility is extremely high". Compared to the FY 2015 survey ( $19.0 \%$ "possibility is high" and $13.8 \%$ "possibility is extremely high"), the proportion presuming a possibility high or extremely high showed a decreasing trend.
- To the question about the possibility of genetic effects to the future generations, $31.0 \%$ responded "very low", $32.9 \%$ "low", $20.9 \%$ "high", and $15.2 \%$ "very high". Compared to FY 2015 survey
(high: $22.0 \%$, very high: $15.6 \%$ ), the proportion of respondents who answered "high" or "very high" shows a declining trend.
- To the question if the respondent have connections to someone to counsel with in case of mental or physical problems, $89.1 \%$ responded "Yes" and $10.9 \%$ "No." Among those who responded "Yes," 28,329 referred to "family, relatives," 15,591 "friends, acquaintances," and 8,464 "medical facilities except for psychiatrists" as possible consultants. Compared to the FY2015 survey ( $73.8 \%$ responded "yes"), the proportion shows an increasing trend.

# Results of Mental Health and Lifestyle Survey for FY 2016 (Revised version) 

Reported on June 2018

## 1 Purpose

The Great East Japan Earthquake on 11 March 2011 and the following accident at the Fukushima Daiichi Nuclear Power Plant brought the residents of Fukushima Prefecture psychological distress or post-traumatic stress disorder (PTSD) caused by anxiety about radiation, evacuation, loss of property, and fearful experiences. The survey started in FY 2011 to understand the residents' mental health and lifestyle, and provide them with appropriate care.
Based on the understanding gained from the results of the Mental Health and Lifestyle Survey for FY 2011-2015, we will continue watching for changes of mental health and lifestyle among residents, and offer care when necessary.

## 2. Methods

## 2-1 Target Groups

- Those who were registered as residents of municipalities designated as the evacuation zones from 11 March 2011 till 1 April 2012. Note that these people remain as the target group even after their departure from the designated evacuation zones.
- Those who were registered as residents of municipalities designated as the evacuation zones as of 1 April 2016.
- Those as deemed necessary based on Basic Survey results, even though above conditions are not met.
208,044 (As of 31 October 2017)
〔Designated evacuation zones〕
Hirono, Naraha, Tomioka, Kawauchi, Okuma, Futaba, Namie, Katsurao, Iitate, Minami-soma, Tamura, Kawamata, and the part of Date (specifically recommended for evacuation).
Ages 0-3 Survey: $\quad 3,668$ individuals born from 2 April 2013 to 1 April 2016
Ages 4-6 Survey:
Primary School Survey:
4,194 individuals born from 2 April 2010 to 1 April 2013
10,479 individuals born from 2 April 2004 to 1 April 2010
Middle School Survey:
5,837 individuals born from 2 April 2001 to 1 April 2004
Adults Survey:
183,866 individuals born before 1 April 2001

## 2-2 Survey Methods

Survey sheets (self-administered or completed by parents) were mailed to the participants.

## 2-3 Data Tabulation Period

Data tabulation period was from 2 February 2017 through 31 October 2017.

## 2-4 Numbers of Respondents and Valid Responses

The numbers of respondents (response rates) were as follows: 798 ( $21.8 \%$ ) for the ages 0-3 survey; $889(21.2 \%)$ for the ages $4-6$ survey; $2,231(21.3 \%)$ for the primary school survey; $1,002(17.2 \%)$ for the middle school survey; and 37,530 ( $20.4 \%$ ) for adults survey.
The numbers of valid responses (valid response rates) were as follows: 798 ( $21.8 \%$ ) for the ages 0-3 survey; $889(21.2 \%)$ for the ages $4-6$ survey; $2,209(21.1 \%)$ for the primary school survey; 1,002 $(17.2 \%)$ for the middle school survey; and $37,466(20.4 \%)$ for adults survey.

The results were tabulated by survey type and item for each question, as shown in the report. Due to some unreported items, the total may not match the aforementioned valid responses. Since the proportions in the report are rounded, there are instances where the total does not add up to $100 \%$.
Table 1. Number of participants, respondents and valid responses (\%)

## Results of the FY 2016 Mental Health and Lifestyle Survey (Age group 0-3)

Among 3,668 people (age group 0-3) in the Mental Health and Lifestyle Survey, the valid response count was $798(21.8 \%)$, of $64(8.0 \%)$ via online response. The breakdown was $404(50.6 \%)$ boys and 394 (49.4\%) girls and the average age was 1.9 years old.

As for the current address, 722 (90.5\%) lived within Fukushima and 76 (9.5\%) lived outside Fukushima.

## 1. Health Condition of the Children (Q1)

Breakdown of the health condition was the following: 315 (40.3\%) for 'very good'; 338 (43.2\%) for 'good'; 124 (15.9\%) for 'normal'; $5(0.6 \%)$ for 'bad'; and $0(0.0 \%)$ for 'very bad'.

## 2. Current Height and Weight of the Children (Q2)

The average height/weight of boys was: $79.4 \mathrm{~cm} / 10.3 \mathrm{~kg}$ for 1 year olds as of 1 April 2017; $87.8 \mathrm{~cm} / 12.9 \mathrm{~kg}$ for 2 year olds; and $95.8 \mathrm{~cm} / 15.0 \mathrm{~kg}$ for 3 year olds. The average height/weight of girls was: $77.4 \mathrm{~cm} / 9.8 \mathrm{~kg}$ for 1 year olds; $87.0 \mathrm{~cm} / 12.2 \mathrm{~kg}$ for 2 year olds; and $94.5 \mathrm{~cm} / 14.1 \mathrm{~kg}$ for 3 year olds.

## 3. Currently Treated Diseases (Q3)

For currently treated diseases, 573 (72.7\%) answered 'no' while 215 (27.3\%) answered 'yes.'
The breakdown of diseases for those who answered 'yes' is shown in Table 2 (multiple answers allowed).

## 4. Experience of Hospitalization in the Past Year (Q4)

For experience of hospitalization in the past year, 680 ( $85.6 \%$ ) answered 'no' while 114 (14.4\%) answered 'yes.'

The breakdown of diseases for those who answered 'yes' is shown in Table 3 (multiple answers allowed).

Table 2. Breakdown of currently treated diseases

| Disease | Count |
| :--- | ---: |
| Common cold | 75 |
| Atopic dermatitis | 47 |
| Asthma | 26 |
| Otitis media | 25 |
| Allergic conditions <br> other than asthma, atopic dermatitis or allergic rhinitis | 17 |
| Allergic rhinitis | 15 |
| Odontopathy | 15 |
| Influenza | 8 |
| Sinusitis/ empyema | 3 |
| ADHD | 1 |
| Epilepsy | 0 |
| Other | 30 |

Table 3. Breakdown of diseases during
hospitalization in the past year

| Disease | Count |
| :--- | ---: |
| Common cold | 55 |
| Respiratory syncytial virus infection | 17 |
| Pneumonia | 15 |
| Influenza | 11 |
| Gastroenteritis | 11 |
| Febrile convulsion | 10 |
| Bronchitis | 8 |
| Asthma | 5 |
| Mycoplasma pneumonia | 3 |
| Rotavirus infection | 3 |
| Inguinal hernia | 3 |
| Kawasaki disease | 1 |
| Other | 25 |

## 5. Sleep Hours and Naps (Q5)

1) The average going-to-bed time was $9: 07 \mathrm{PM}$ and the average waking time was $7: 00 \mathrm{AM}$. The average sleep hours were 9 hour and 53 minutes.
2) For naps (Does your child take naps?), those who answered 'no' were 81 (10.2\%) and 'yes' were 714 (89.8\%). The average nap time was 1 hour and 54 minutes.

## 6. Regular Amount of Exercise (Q6)

Regarding exercise (What is the child's regular amount of exercise?) for two year olds and above at the time of the survey, those who answered 'almost every day' were 274 ( $54.5 \%$ ); ' $2-4$ times a week' were 155 ( $30.8 \%$ ); ‘once a week' were 57 ( $11.3 \%$ ); and 'barely exercise' were 17 (3.4\%).

## 7. Dietary Habits (Q7)

1) For breast milk (Does your child drink breast milk?), those who answered 'yes' were 120 ( $15.1 \%$ ) and 'no' were 674 ( $84.9 \%$ ).
2) See Table 4 for the dietary habits in the past month (among those who were one year old and above at the time of the survey).

Table 4. Dietary habits in the past month

|  | Yes | No | Valid <br> responses |
| :--- | :---: | :---: | :---: |
| 1. Does your child consume fish more than three days <br> a week? | $404(53.1 \%)$ | $357(46.9 \%)$ | 761 |
| 2. Does your child consume seaweed, mushrooms or <br> vegetables other than pickles with almost every <br> meal? | $541(71.1 \%)$ | $220(28.9 \%)$ | 761 |
| 3. Does your child consume fruit almost every day? | $472(62.2 \%)$ | $287(37.8 \%)$ | 759 |
| 4. Does your child consume soy products almost <br> every day? | $531(69.8 \%)$ | $230(30.2 \%)$ | 761 |
| 5. Does your child consume dairy products almost <br> every day? | $623(81.9 \%)$ | $138(18.1 \%)$ | 761 |

## 8. Child Rearing (Q8)

For child rearing (Do you ever lose confidence in child rearing?), those who answered 'yes' were 87 (10.9\%), 'no' were 368 ( $46.2 \%$ ), and 'cannot say' were 341 ( $42.8 \%$ ).

## Results of the FY 2016 Mental Health and Lifestyle Survey (Age group 4-6)

Among the 4,194 people for the survey (age group 4-6), there were 889 (21.2\%) valid responses, of $56(6.3 \%)$ via online response. The breakdown was 432 ( $48.6 \%$ ) boys and 457 (51.4\%) girls with an average age of 5.1 years old.

As for the current address, 710 (79.9\%) lived within Fukushima and 179 (20.1\%) lived outside Fukushima.

## 1. Health Condition of the Children (Q1)

Breakdown of the health condition was the following: 288 (34.0\%) for 'very good'; 322 (38.0\%) for 'good'; 234 (27.6\%) for 'normal'; $4(0.5 \%)$ for 'bad'; and $0(0.0 \%)$ for 'very bad.'

## 2. Current Height and Weight of the Children (Q2)

The average height/weight of boys was the following: $102.3 \mathrm{~cm} / 16.4 \mathrm{~kg}$ for 4 year olds as of 1 April $2017,109.4 \mathrm{~cm} / 18.9 \mathrm{~kg}$ for 5 year olds and $116.1 \mathrm{~cm} / 21.8 \mathrm{~kg}$ for 6 year olds. The average height/weight for girls was the following: $103.0 \mathrm{~cm} / 16.9 \mathrm{~kg}$ for 4 year olds, $108.5 \mathrm{~cm} / 18.3 \mathrm{~kg}$ for 5 year olds, and $114.7 \mathrm{~cm} / 20.6 \mathrm{~kg}$ for 6 year olds.

## 3. Currently Treated Diseases (Q3)

For currently treated diseases, 548 (62.1\%) answered 'no' and 334 (37.9\%) answered 'yes'.
The breakdown of diseases for individuals who answered 'yes' is shown in Table 5 (multiple answers allowed).

## 4. Experience of Hospitalization in the Past Year (Q4)

For experience of hospitalization in the past year, 789 ( $89.4 \%$ ) answered 'no' and 94 ( $10.6 \%$ ) answered 'yes'.

The breakdown of diseases for those who answered 'yes' is shown in Table 6 (multiple answers allowed).

Table 5. Breakdown of currently treated diseases

| Disease | Count |  |
| :--- | ---: | :---: |
| Allergic rhinitis | 80 |  |
| Asthma | 69 |  |
| Atopic dermatitis | 59 |  |
| Common cold | 57 |  |
| Odontopathy | 51 |  |
| Otitis media | 31 |  |
| ollergic conditions <br> other than asthma, atopic dermatitis or allergic rhinitis | 21 |  |
| Sinusitis/ empyema | 19 |  |
| Influenza | 15 |  |
| ADHD | 11 |  |
| Epilepsy | 1 |  |
| Other | 44 |  |
| Multiple answers |  |  |

Table 6. Breakdown of diseases during
hospitalization in the past year

| Disease | Count |
| :--- | ---: |
| Common cold | 48 |
| Gastroenteritis | 19 |
| Asthma | 11 |
| Influenza | 11 |
| Pneumonia | 8 |
| Bronchitis | 6 |
| Febrile convulsion | 5 |
| Mycoplasma pneumonia | 4 |
| Inguinal hernia | 4 |
| Respiratory syncytial virus infection | 3 |
| Rotavirus infection | 0 |
| Kawasaki disease | 0 |
| Other | 22 |

## 5. Sleep Hours and Naps (Q5)

1) The average going-to-bed time was $9: 11 \mathrm{PM}$ and the average waking time was $6: 49 \mathrm{AM}$. The average sleep hours were 9 hours and 37 minutes.
2) For naps (Does your child take naps?), those who answered 'no' were 561 ( $63.4 \%$ ), and 'yes' were 324 (36.6\%). The average nap time was 1 hour and 33 minutes.

## 6. Regular Amount of Exercise (Q6)

For exercise (What is your regular amount of exercise?), those who answered 'almost every day' were $512(57.7 \%)$, '2-4 times a week' were $263(29.7 \%)$, 'once a week' were $81(9.1 \%)$, and 'barely exercise' were 31 ( $3.5 \%$ ).

## 7. Dietary Habits (Q7)

See Table 7 for the dietary habits in the past month.

Table 7. Dietary habits in the past month

|  | Faster | Normal// <br> Slower | Valid <br> responses |
| :--- | :---: | :---: | :---: |
| 1. Does your child eat faster than others? | $79(8.9 \%)$ | $809(91.1 \%)$ | 888 |
|  | Yes | No | Valid <br> Responses |
| 2. Does your child drink sugary beverages <br> almost every day? | $262(29.5 \%)$ | $627(70.5 \%)$ | 889 |
| 3. Does your child consume fish more than <br> three days a week? | $427(48.0 \%)$ | $462(52.0 \%)$ | 889 |
| 4. Does your child consume seaweed, mushrooms or <br> vegetables other than pickles with almost every <br> meal? | $603(67.8 \%)$ | $286(32.2 \%)$ | 889 |
| 5. Does your child consume fruit almost every <br> day? | $483(54.4 \%)$ | $405(45.6 \%)$ | 888 |
| 6. Does your child consume soy products almost <br> every day? | $500(56.3 \%)$ | $388(43.7 \%)$ | 888 |
| 7. Does your child consume dairy products <br> almost every day? | $737(82.9 \%)$ | $152(17.1 \%)$ | 889 |
| 8. Does your child consume prepared foods <br> almost every day? | $102(11.5 \%)$ | $787(88.5 \%)$ | 889 |
| 9. Does your child eat out almost every day? | $8(0.9 \%)$ | $881(99.1 \%)$ | 889 |

## 8. Child's Emotions and Behavior (Q8)

1) For child's emotions and behavior (SDQ Japanese version), among the 888 valid responses, 99 $(11.1 \%)$ were 16 points and above ${ }^{1)}$, and $35(3.9 \%)$ were 20 points and above ${ }^{2)}$ (Fig. 1). The average total points were 9.1 points.

For boys, among the 432 valid responses, $56(13.0 \%)$ were 16 points and above; $20(4.6 \%)$ were 20 points and above. For girls, among the 456 valid responses, 43 ( $9.4 \%$ ) were 16 points and above; and $15(3.3 \%)$ were 20 points and above (Fig. 2). The average total score for boys was 9.7 points while the total score for girls was 8.5 .
2) Regarding whether children have any issues in one or more areas (emotions, attention, behavior or
interaction with others), those that answered 'no' were 678 ( $76.4 \%$ ), 'yes (minor issues)' were 174 (19.6\%), 'yes (clear issues)' were 29 (3.3\%), and 'yes (serious issues)' were 6 ( $0.7 \%$ ).
3) Among those who answered 'yes' to the above question, regarding whether or not their child is upset or concerned due to the issue, those who answered 'not at all' were 103 (50\%); 'only a little' were 91 ( $44.2 \%$ ); 'very' were $10(4.9 \%)$; and 'greatly' were 2 ( $1.0 \%$ ).

Figure1. Children's emotions and behavior for age group 4-6 (SDQ) :Overall

Figure2. Children's emotions and behavior for age group 4-6 (SDQ) by sex

1) 16 points: A standard value indicated by previous research
2) 20 points : A standard established by Fukushima Medical University physicians to provide support

## 9. Nursery School and Kindergarten (Q9)

To the question "Do your children ever not want to go to nursery school or kindergarten?" 136 (15.3\%) answered 'yes,' 719 (81.2\%) answered 'no,' and 31 (3.5\%) answered 'the child was not attending nursery school or kindergarten at the moment.'

## Results of the FY 2016 Mental Health and Lifestyle Survey (Primary school age)

Among 10,479 people of the Mental Health and Lifestyle Survey (for primary school students), 2,209 $(21.1 \%)$ provided valid responses, of $147(6.7 \%)$ via online response. . The breakdown was $1,110(50.2 \%)$ boys and $1,099(49.8 \%)$ girls with an average age of 9.3 years old.

As for the current address, 1,682 (76.1\%) lived within Fukushima and 527 (23.9\%) lived outside Fukushima.

## 1. Health Condition of The Children (Q1)

Breakdown of the health state was the following: 546 (26.8\%) for 'very good'; 854 ( $41.9 \%$ ) for 'good'; $615(30.2 \%)$ for 'normal'; $22(1.1 \%)$ for 'bad'; and $0(0.0 \%)$ for 'very bad'.

## 2. Current Height and Weight of the Children (Q2)

The average height/weight of boys was the following: $121.7 \mathrm{~cm} / 24.1 \mathrm{~kg}$ for 1 st graders; 127.3 $\mathrm{cm} / 27.7 \mathrm{~kg}$ for 2 nd graders; $134.3 \mathrm{~cm} / 32.1 \mathrm{~kg}$ for 3rd graders; $138.8 \mathrm{~cm} / 34.1 \mathrm{~kg}$ for 4th graders; 144.8 $\mathrm{cm} / 38.5 \mathrm{~kg}$ for 5 th graders; and $151.6 \mathrm{~cm} / 43.8 \mathrm{~kg}$ for 6th graders. The average height/weight of girls was the following: $120.8 \mathrm{~cm} / 23.4 \mathrm{~kg}$ for 1 st graders; $125.8 \mathrm{~cm} / 25.9 \mathrm{~kg}$ for 2 nd graders; $132.2 \mathrm{~cm} / 29.9$ kg for 3 rd graders; $139.2 \mathrm{~cm} / 34.0 \mathrm{~kg}$ for 4 th graders; $145.5 \mathrm{~cm} / 39.0 \mathrm{~kg}$ for 5 th graders; and 149.9 $\mathrm{cm} / 41.8 \mathrm{~kg}$ for 6 th graders.

## 3. Currently Treated Diseases (Q3)

For currently treated diseases, 1,389 (63.3\%) answered 'no' and 806 (36.7\%) answered 'yes.'
The breakdown of diseases for those who answered 'yes' is shown in Table 8 (multiple answers allowed).

## 4. Experience of Hospitalization in the Past Year (Q4)

For experience of hospitalization in the past year, 2,046 (92.8\%) answered 'no' and 159 ( $7.2 \%$ ) answered 'yes.'

The breakdown of diseases for those who answered 'yes' is shown in Table 9 (multiple answers allowed).

Table 8. Breakdown of currently treated diseases

| Disease | Count |
| :--- | ---: |
| Allergic rhinitis | 318 |
| Odontopathy | 193 |
| Atopic dermatitis | 128 |
| Asthma | 87 |
| Common cold | 66 |
| Allergic conditions <br> other than asthma, atopic dermatitis or allergic rhinitis | 62 |
| Sinusitis/ empyema | 46 |
| ADHD | 39 |
| Influenza | 34 |
| Otitis media | 33 |
| Epilepsy | 13 |
| Other | 125 |
| Multiple answers |  |

Table 9. Breakdown of diseases during hospitalization in the past year

| Disease | Count |  |
| :--- | ---: | :---: |

| Influenza | 47 |  |
| Gastroenteritis | 22 |  |
| Asthma | 16 |  |
| Mycoplasma pneumonia | 12 |  |
| Bronchitis | 9 |  |
| Pneumonia | 5 |  |
| Rotavirus infection | 2 |  |
| Febrile convulsion | 2 |  |
| Inguinal hernia | 2 |  |
| Respiratory syncytial virus infection | 1 |  |
| Kawasaki disease | 0 |  |
| Other | 27 |  |
| Multiple answers |  |  |

## 5. Sleep (Q5)

The average going-to-bed time was 9:32 PM and the average waking time was 6:24 AM. The average sleep hours were 8 hours and 52 minutes.

## 6. Regular Amount of Exercise (Q6)

For exercise (What is the child's regular amount of exercise?), those who answered 'almost every day' were 187 ( $8.5 \%$ ); '2-4 times a week' were 690 ( $31.3 \%$ ); 'once a week' were 603 ( $27.4 \%$ ); and 'barely exercise' were 724 ( $32.8 \%$ ).

## 7. Dietary Habits (Q7)

The dietary habits in the past month are shown in Table 10.

Table 10. Dietary habits in the past month

|  | Faster | Normal/Slower | Valid <br> responses |
| :--- | :---: | :---: | :---: |
| 1. Does your child eat faster than others? | $291(13.2 \%)$ | $1,913(86.8 \%)$ | 2,204 |
|  | Yes | No | Valid <br> Responses |
| 2. Does your child skip breakfast often? | $144(6.5 \%)$ | $2,065(93.5 \%)$ | 2,209 |
| 3. Does your child drink sugary beverages almost <br> every day? | $565(25.6 \%)$ | $1,644(74.4 \%)$ | 2,209 |
| 4. Does your child consume seaweed, mushrooms or <br> vegetables other than pickles with almost every <br> meal? | $1,083(49.0 \%)$ | $1,126(51.0 \%)$ | 2,209 |
| 5. Does your child consume vegetables other than <br> pickles, seaweed, or mushrooms with almost <br> every meal? | $1,474(66.8 \%)$ | $734(33.2 \%)$ | 2,208 |
| 6. Does your child consume fruit almost every day? | $847(38.4 \%)$ | $1,360(61.6 \%)$ | 2,207 |
| 7. Does your child consume soy products almost <br> every day? | $1,243(56.3 \%)$ | $965(43.7 \%)$ | 2,208 |
| 8. Does your child consume dairy products almost <br> every day? | $1,906(86.3 \%)$ | $302(13.7 \%)$ | 2,208 |
| 9. Does your child consume prepared foods almost | $168(7.6 \%)$ | $2,039(92.4 \%)$ | 2,207 |
| every day? | $12(0.5 \%)$ | $2,197(99.5 \%)$ | 2,209 |
| 10. Does your child eat out almost every day? |  |  |  |

## 8. Child's Emotions and Behavior (Q8)

1) For child's emotions and behavior (SDQ Japanese version), among the 2,207 valid responses, 279 ( $12.6 \%$ ) were 16 points and above ${ }^{1)}$, and $102(4.6 \%)$ were 20 points and above ${ }^{2)}$ (Fig. 3). The average total point was 8.7.
For boys, among the 1,109 valid responses, $166(15.0 \%)$ were 16 points and above, and $71(6.4 \%)$ were 20 points and above. For girls, among the 1,098 valid responses, 113 ( $10.3 \%$ ) were 16 points and above and 31 ( $2.8 \%$ ) were 20 points and above (Fig. 4). The average total score for boys was 9.2 points while the total score for girls was 8.1 points.
2) Regarding whether children have any issues in one or more areas (emotions, focus, behavior or interaction with others), those who answered 'no' were 1,608 (73.2\%); 'yes (minor issues)' were 472 (21.5\%); 'yes (clear issues)' were 95 ( $4.3 \%$ ); and 'yes (serious issues)' were 23 ( $1.0 \%$ ).
3) Among those who answered 'yes' for the above questions, regarding whether or not the child is upset or concerned due to the issue: those who answered 'not at all' were 179 ( $31.1 \%$ ); 'only a little' were 356 (61.9\%);'very' were 34 (5.9\%); and 'greatly' were 6 (1.0\%)

Figure3. Children's emotions and behavior among primary school students (SDQ): Overall

Figure4. Children's emotions and behavior among primary school students (SDQ) by sex

1) A standard value indicated by previous research
2) A standard established by Fukushima Medical University physicians to provide support.

## 9. School (Q9)

To the question "Do your children ever not want to go to school?" 222 (10.2\%) answered 'yes' and 1,959 (89.8\%) answered 'no.'

## Results of the FY 2016 Mental Health and Lifestyle Survey (Middle school age)

Among the 5,837 people for the survey (for middle school students), there were $1,002(17.2 \%)$ valid responses, of $80(8.0 \%)$ via online response. . The breakdown was 526 (52.5\%) boys and 476 (47.5\%) girls with an average age of 13.9 years old.

As for the current address, 785 (78.3\%) lived within Fukushima and 217 (21.7\%) lived outside Fukushima.

## 1. Health Condition of the Child (Q1)

Breakdown of the health condition was the following: 192 (29.7\%) for 'very good'; 206 (31.9\%) for 'good'; 228 (35.3\%) for 'normal'; 19 (2.9\%) for 'bad'; and 1 ( $0.2 \%$ ) for 'very bad'.

## 2. Current Height and Weight of the Child (Q2)

The average height/weight of boys was the following: $158.8 \mathrm{~cm} / 48.8 \mathrm{~kg}$ for 7 th graders; 164.5 $\mathrm{cm} / 54.0 \mathrm{~kg}$ for 8th graders; and $167.9 \mathrm{~cm} / 58.3 \mathrm{~kg}$ for 9 th graders. The average height/weight for girls were the following: $154.6 \mathrm{~cm} / 46.9 \mathrm{~kg}$ for 7 th graders; $156.3 \mathrm{~cm} / 49.8 \mathrm{~kg}$ for 8 th graders; and 156.5 $\mathrm{cm} / 52.0 \mathrm{~kg}$ for 9 th graders.

## 3. Sleep (Q3)

1) The average sleeping hours were 7 hours and 6 minutes.
2) For sleep satisfaction, 310 (47.8\%) answered 'sufficient', 275 ( $42.4 \%$ ) answered 'slightly insufficient', and 64 ( $9.9 \%$ ) answered 'insufficient'.

## 4. Regular Amount of Exercise (Q4)

For exercise (What is your regular amount of exercise aside from physical education classes?), those who answered 'almost every day' were 292 (44.8\%), '2-4 times a week' were 110 ( $16.9 \%$ ), 'once a week' were 49 ( $7.5 \%$ ), and 'barely exercise' were 201 (30.8\%).

## 5. Dietary Habits (Q5)

The dietary habits in the past month are as shown in Table 11 (next page).

Table11. Dietary habits in the past month

|  | Faster | Normal/ Slower | Valid <br> responses |
| :--- | :---: | :---: | :---: |
| 1. Do you eat faster than others? | $152(23.3 \%)$ | $499(76.7 \%)$ | 651 |
|  | Yes | No | Valid <br> responses |
| 2. Do you skip breakfast often? | $86(13.2 \%)$ | $564(86.8 \%)$ | 650 |
| 3. Do you go to sleep within 1-2 hours after dinner? | $62(9.5 \%)$ | $589(90.5 \%)$ | 651 |
| 4. Do you drink sugary beverages almost every day? | $210(32.2 \%)$ | $442(67.8 \%)$ | 652 |
| 5. Do you consume fish more than three days a week? | $286(43.9 \%)$ | $366(56.1 \%)$ | 652 |
| 6. Does your child consume seaweed, mushrooms or <br> vegetables other than pickles with almost every <br> meal? | $455(69.8 \%)$ | $197(30.2 \%)$ | 652 |
| 7. Do you consume fruit almost every day? |  |  |  |
| 8. Do you consume soy products almost every day? | $349(53.6 \%)$ | $302(46.4 \%)$ | 651 |
| 9. Do you consume dairy products almost every day? | $539(82.8 \%)$ | $112(17.2 \%)$ | 651 |
| 10. Do you consume prepared foods almost every day? | $93(14.3 \%)$ | $557(85.7 \%)$ | 650 |
| 11. Do you eat out almost every day? | $3(0.5 \%)$ | $647(99.5 \%)$ | 650 |

## 6. Currently Treated Diseases (Q6)

For currently treated diseases, 616 (67.4\%) answered 'no' while 298 (32.6\%) answered 'yes.'
The breakdown of diseases for individuals who answered 'yes' is shown in Table 12 (multiple answers allowed).

## 7. Experience of Hospitalization in the Past Year (Q7)

For experience of hospitalization in the past year, 885 ( $97.0 \%$ ) answered 'no' and 27 ( $3.0 \%$ ) answered 'yes.'

The breakdown of those who answered 'yes' is shown in Table 13 (multiple answers allowed).

Table 12. Breakdown of currently treated diseases

| Disease | Count |
| :--- | ---: |
| Allergic rhinitis | 125 |
| Odontopathy | 71 |
| Atopic dermatitis | 43 |
| Asthma | 24 |
| Allergic conditions <br> other than asthma, atopic dermatitis or allergic rhinitis | 23 |
| ADHD | 14 |

| Common cold | 8 |
| Influenza | 7 |
| Epilepsy | 6 |
| Otitis media | 1 |
| Other | 67 |

Table 13. Breakdown of diseases during hospitalization in
the past year

| Disease | Count |
| :--- | ---: |
| Common cold | 14 |
| Influenza | 11 |
| Gastroenteritis | 3 |
| Pneumonia | 1 |
| Bronchitis | 1 |
| Asthma | 0 |
| Mycoplasma pneumonia | 0 |
| Respiratory syncytial virus infection | 0 |
| Rotavirus infection | 0 |
| Febrile convulsion | 0 |
| Kawasaki disease | 0 |
| Inguinal hernia | 0 |
| Other | 7 |

## 8. Child's Emotions and Behavior (Q8)

1) For child's emotions and behavior (SDQ Japanese version), among the 915 valid responses, 113 ( $12.3 \%$ ) were 16 points and above ${ }^{1)}$ and 45 ( $4.9 \%$ ) were 20 points and above ${ }^{2}$ (Fig. 5). The average total point was 8.2.
For boys, among the 483 valid responses, $66(13.7 \%)$ were 16 points and above and $29(6.0 \%)$ were 20 points and above. For girls, among the 432 valid responses, 47 ( $10.9 \%$ ) were 16 points and above and 16 ( $3.7 \%$ ) were 20 points and above (Fig. 6). The average total score for boys was 8.5 points and the total score for girls was 7.9.
2) Regarding whether children have any issues in one or more areas (emotions, focus, behavior or interaction with others), those who answered 'no' were 634 ( $69.7 \%$ ),' 'yes (minor issues)' were 191 (21.0\%), 'yes (clear issues)' were 60 (6.6\%), and 'yes (serious issues)' were 24 ( $2.6 \%$ ).
3) Among those that answered 'yes' for the above question, regarding whether or not the child is confused or concerned due to the issue, those who answered 'not at all' were 47 ( $17.6 \%$ ), 'only a little' were 164 (61.4\%), 'very' were 37 ( $13.9 \%$ ), and 'greatly' were 19 (7.1\%).

Figure5. Children' s emotions and behavior for middle school students (SDQ): Overall

Figure6. Children's emotions and behavior for middle school students (SDQ) by sex

1) A standard value indicated by previous research
2) A standard established by Fukushima Medical University physicians to provide support.

## 9. School (Q9)

To the question "Do your children ever not want to go to school?" 126 (14.1\%) answered 'yes' and 769 (85.9\%) answered 'no.'

## Results of the FY 2016 Mental Health and Lifestyle Survey (Adults)

Among the 183,866 adults for the Mental Health and Lifestyle Survey, there were 37,466 (20.4\%) valid responses, of $1,566(4.2 \%)$ via online response. The breakdown was $16,987(45.3 \%)$ males and 20,479 ( $54.7 \%$ ) females with an average age of 61.9 years old.

As for the current address, 32,063 (85.6\%) lived within Fukushima and 5,403 (14.4\%) lived outside Fukushima.

## 1. Health condition (Q1)

Breakdown of the health condition was the following: 1,346 (4.2\%) for 'very good'; 5,385 (16.7\%) for 'good'; 19,961 (62.0\%) for 'normal'; 4,979 (15.5\%) for 'bad'; and $505(1.6 \%)$ for 'very bad'.

## 2. Height and Weight (Q2)

1) The average height/weight of males was $165.8 \mathrm{~cm} / 66.4 \mathrm{~kg}$ and the average BMI was $24.1 \mathrm{~kg} / \mathrm{m}^{2}$. Among males, those with less than BMI $18.5 \mathrm{~kg} / \mathrm{m}^{2}$ were 580 ( $3.6 \%$ ); $18.5 \mathrm{~kg} / \mathrm{m}^{2}$ and above and less than $25.0 \mathrm{~kg} / \mathrm{m}^{2}$ were 9,835 ( $60.3 \%$ ); $25.0 \mathrm{~kg} / \mathrm{m}^{2}$ and above and less than $27.5 \mathrm{~kg} / \mathrm{m}^{2}$ were $3,506(21.5 \%) ; 27.5 \mathrm{~kg} / \mathrm{m}^{2}$ and above and less than $30.0 \mathrm{~kg} / \mathrm{m}^{2}$ were $1,495(9.2 \%)$; and 30.0 $\mathrm{kg} / \mathrm{m}^{2}$ and above were 901 ( $5.5 \%$ ).
The average height/weight of females was $153.1 \mathrm{~cm} / 54.2 \mathrm{~kg}$ and the average BMI was $23.2 \mathrm{~kg} / \mathrm{m}^{2}$. For females, those with a BMI less than $18.5 \mathrm{~kg} / \mathrm{m}^{2}$ were $1,464(7.6 \%) ; 18.5 \mathrm{~kg} / \mathrm{m}^{2}$ and above and less than $25.0 \mathrm{~kg} / \mathrm{m}^{2}$ were $12,529(65.2 \%) ; 25.0 \mathrm{~kg} / \mathrm{m}^{2}$ and above and less than $27.5 \mathrm{~kg} / \mathrm{m}^{2}$ were 2,894 ( $15.1 \%$ ); $27.5 \mathrm{~kg} / \mathrm{m}^{2}$ and above and less than $30.0 \mathrm{~kg} / \mathrm{m}^{2}$ were $1,324(6.9 \%)$; and $30.0 \mathrm{~kg} / \mathrm{m}^{2}$ and above were $1,016(5.3 \%)$.
2) For body weight change (Did you have any body weight change compared to last year?), those who answered 'it increased by 3 kg or more' were 4,365 ( $12.4 \%$ ); 'it did not change ( $\pm 3 \mathrm{~kg}$ ), were $28,034(79.3 \%)$; and 'it decreased by 3 kg or more' were 2,931 ( $8.3 \%$ ).
For body weight change for males, those who answered 'it increased by 3 kg or more' were 1,834 $(11.4 \%)$; 'it did not change ( $\pm 3 \mathrm{~kg}$ )' were 12,885 ( $80.0 \%$ ); and 'it decreased by 3 kg or more' were 1,387 ( $8.6 \%$ ).

For body weight change for females, those who answered 'it increased by 3 kg or more' were $2,531(13.2 \%)$; 'it didn't change ( $\pm 3 \mathrm{~kg}$ )' were 15,149 ( $78.8 \%$ ); and 'it decreased by 3 kg or more' were $1,544(8.0 \%)$.

## 3. Medical History in the Past Year (Q3)

Medical history in the past year (Have you been diagnosed with some of the following diseases in the past year?) is shown in Table 14.

Table 14. Experience of diagnoses by general illness and the state of attending hospital as outpatient
(Upper row is the number of individuals/lower row is proportion)

1) Proportion of the valid responses
2) Among these, 419 individuals answered that they were not currently attending hospital as outpatient since they have recovered.

## 4. Sleep (Q4)

1) The average sleep hours were 7 hours and 2 minutes.
2) As for sleep satisfaction, those who answered 'sufficient' were 12,703 (39.3\%); 'slightly insufficient' were $14,902(46.1 \%)$; 'very insufficient' were $3,871(12.0 \%)$; and 'greatly insufficient or couldn't go to sleep" were 844 (2.6\%).
3) Experiences related to sleep (Have you experienced the following conditions at least three times a week?) are shown in Table 15.

Table 15. Experiences related to sleep among adults

|  | Yes No <br> responses  |  |  |
| :--- | ---: | ---: | ---: |
| 1. It takes time to fall sleep at night after going to bed. | $12,806(40.1 \%)$ | $19,122(59.9 \%)$ | 31,928 |
| 2. I wake up during the night in the middle of sleep | $20,671(64.5 \%)$ | $11,393(35.5 \%)$ | 32,064 |
| 3. I wake up before the time I set and can't go back to <br> sleep. | $12,546(39.9 \%)$ | $18,895(60.1 \%)$ | 31,441 |
| 4. Total hour of sleep is not enough. | $11,167(36.1 \%)$ | $19,784(63.9 \%)$ | 30,951 |
| 5. I feel depressed during the day. | $7,653(24.9 \%)$ | $23,094(75.1 \%)$ | 30,747 |
| 6. My physical and mental activity levels during the | $8,891(28.6 \%)$ | $22,143(71.4 \%)$ | 31,034 |
| day are low. | $15,284(48.6 \%)$ | $16,183(51.4 \%)$ | 31,467 |
| 7. I feel sleepy during the day. |  |  | 3 |

## 5. Exercise (Q5)

Those who answered they exercised 'almost every day' were 5,818 ( $15.9 \%$ ), ' $2-4$ times per week' were $9,112(24.9 \%)$, 'once a week' were $6,241(17.0 \%)$, and 'almost never' were 15,486 ( $42.2 \%$ ).

## 6. Smoking (Q6)

As for smoking (Do you smoke tobacco or cigarettes except for cigars and pipes?), those who answered 'have never smoked' were 20,199 (57.6\%); 'I quit' were 9,447 (27.0\%); and 'yes' were 5,399 (15.4\%).

Among those who responded 'yes', the average smoking history was 31.6 years, the average number of cigarettes was 16.1 per day.

## 7. Alcohol consumption (Q7)

1) For alcohol consumption (Do you currently drink alcohol?), those who answered 'no, or barely drink (less than once a month)' were 19,087 ( $54.2 \%$ ); 'I quit' were 1,675 ( $4.8 \%$ ); and 'yes (at least once a month)' were 14,458 ( $41.1 \%$ ).
2) Among those who answered 'yes (at least once per month)', those who answered 'one day a week' were $2,004(14.4 \%)$; 'two days a week' were $1,462(10.5 \%)$; 'three days a week' were $1,362(9.8 \%)$; ‘four days a week' were $816(5.9 \%)$; 'five days a week' were $1,442(10.4 \%)$; 'six days a week' were 1,749 ( $12.6 \%$ ); and 'seven days a week' were 5,037 (36.3\%).
3) The average alcohol consumption per day was around 2.2 drinks per day. Among the 35,220 valid responses for alcohol consumption (Q7-1), 2,874 (8.2\%) consumed excessively (4 drinks and above).
4) For experience related to alcohol consumption (Answer the following questions about the past 30 days. CAGE screens for alcoholism.), the responses of each item are shown in Table 16. 'Yes' was 1 point and the total points of the four items were calculated.
The results by age group are shown in Table 17. Overall, those with 0 points were 8,171 ( $62.9 \%$ ); 1 point was $2,924(22.5 \%) ; 2$ points were $1,152(8.9 \%) ; 3$ points were $546(4.2 \%)$; and 4 points were 192 (1.5\%).

For males, those with 0 points were 5,058 ( $57.1 \%$ ); 1 point were 2,288 ( $25.8 \%$ ); 2 points were 910 ( $10.3 \%$ ); 3 points were $442(5.0 \%)$; and 4 points were 159 ( $1.8 \%$ ). For females, 0 points were 3,113 ( $75.4 \%$ ); 1 point were $636(15.4 \%) ; 2$ points were $242(5.9 \%) ; 3$ points were $104(2.5 \%)$; and 4 points were 33 ( $0.8 \%$ ).

Table 16. Experience related to alcohol consumption (Upper row is the number of individuals/lower row is percentage)

|  |  | No | Yes | Valid <br> responses |
| :--- | :--- | ---: | ---: | ---: |
| 1 | Have you ever felt you should cut down on your drinking? | 9,172 <br> $(69.6 \%)$ | 4,004 <br> $(30.4 \%)$ | 13,176 |
| 2 | Have people annoyed you by criticizing your drinking? | 11,848 <br> $(90.8 \%)$ | 1,194 <br> $(9.2 \%)$ | 13,042 |
| 3 | Have you ever felt bad or guilty about your drinking? | 11,434 <br> $(87.6 \%)$ | 1,621 <br> $(12.4 \%)$ | 13,055 |
| 4 | Have you ever had a drink first thing in the morning to steady your | 12,093 <br> $(92.5 \%)$ | 975 <br> $(7.5 \%)$ | 13,068 |

Since there are missing values for each item, totals may not match.

## 8. Appetite (Q8)

When asked about their appetite (How often have you lost appetite in the last two weeks?), 27,879 $(77.7 \%)$ answered zero, $6,262(17.5 \%)$ answered a few days, $990(2.8 \%)$ answered more than a week, and $735(2.0 \%)$ answered almost every day.

## 9. Dietary Habits (Q9)

The dietary habits in the past month are as shown in Table 18.

Table 18. Dietary habits in the past month

|  | Faster | Normal/ Slower | Valid <br> responses |
| :--- | :---: | :---: | :---: |
| 1. Do you eat faster than others? | $10,099(27.3 \%)$ | $26,828(72.7 \%)$ | 36,927 |
|  | Yes | No | Valid <br> responses |
| 2. Do you skip breakfast often? | $5,561(15.1 \%)$ | $31,282(84.9 \%)$ | 36,843 |
| 3. Do you eat snacks during daytime or late at night <br> almost every day? | $10,171(27.7 \%)$ | $26,500(72.3 \%)$ | 36,671 |
| 4. Do you consume dinner within 2 hours before <br> going-to-bed more than three times a week? | $7,669(20.9 \%)$ | $28,951(79.1 \%)$ | 36,620 |
| 5. Do you consume prepared foods almost every <br> day? | $8,875(24.1 \%)$ | $27,917(75.9 \%)$ | 36,792 |

## 10. Overall mental health (Q10)

1) For overall mental health (K6), among the 31,637 valid responses, the number of those with 13 points ${ }^{* 3}$ and above ${ }^{1}$ was $2,160(6.8 \%)$ (Fig. 7). The average points were 4.4 points.
For males, among the 14,448 valid responses, the number of those with 13 points and above was $928(6.4 \%)$. For females, among the 17,189 valid responses, 13 points and above were 1,232 (7.2\%) (Fig. 8). The average points for males and females were 4.1 and 4.6 points respectively. Table 19 (next page) shows the data by age group.

Figure7. The general mental health state (K6) : Overall

Figure8. The general mental health state (K6) by gender

Table 19. General mental health state (K6) by age group

|  | 13 points and above | Valid responses |
| :--- | ---: | :---: |
| 10 s | $47(8.2 \%)$ | 571 |
| 20 s | $133(8.8 \%)$ | 1,509 |
| 30 s | $222(8.4 \%)$ | 2,633 |
| 40 s | $259(8.3 \%)$ | 3,126 |
| 50 s | $330(8.3 \%)$ | 3,984 |
| 60 s | $437(4.9 \%)$ | 8,888 |
| 70 and above | $732(6.7 \%)$ | 10,926 |

$※ 3.13$ points :A standard value indicated by previous research
2) To the question if they had problems in daily lives because of such experiences/difficulties, 21,270 (65.4\%) responded "Not at all", 7,134 (21.9\%) "A little", 2,790 (8.6\%) "Sometimes" 670 ( $2.1 \%$ ) "Most of the times", and 638 (2.0\%) "Always".

## 11. Experience of Great East Japan Earthquake and Trauma Reactions (Q11)

1) About experiences related to the Great East Japan Earthquake (multiple answers), 32,117 referred to "earthquake," 6,430 to "Tsunami," 30,833 to "Nuclear Power Plant accident," and 608 to "none."
2) PTSD Checklist (PCL-4) received 30,263 valid answers, of which 3,001 (9.9\%) scored 12 points and above ${ }^{* 4}$ (Figure 9). The average score was 6.8.

For males, of 13,831 valid responses, $1,246(9.0 \%)$ scored 12 points and above, and for females, of 16,432 valid answers, $1,755(10.7 \%)$ scored 12 points and above. The average of males was 6.7 , while that of females was 6.9.

Classification by age groups is as in Table 20. (next page)

Figure9. Trauma Reaction of the general public (PCL-4): Overall

Figure 10. Trauma Reaction of the general public (PCL-4): by gender

Table 20 Trauma Reaction among adults (PCL-4): Classified by age groups (number (ratio))

|  | 12 points and above | Valid responses |
| :--- | ---: | :---: |
| 10 s | $17(3.0 \%)$ | 561 |
| 20 s | $74(5.1 \%)$ | 1,465 |
| 30 s | $133(5.2 \%)$ | 2,562 |
| 40 s | $217(7.1 \%)$ | 3,069 |
| 50 s | $295(7.6 \%)$ | 3,885 |
| 60 s | $685(8.0 \%)$ | 8,554 |
| 70 and above | $1,580(15.5 \%)$ | 10,167 |

$※ 4$. 12 points: A standard value indicated by previous research

## 12. Current Living Conditions (Q12)

1) To the question whether or not one had to live separately from family due to disaster, 11,464 ( $31.7 \%$ ) answered 'yes' and 24,741 ( $68.3 \%$ ) answered 'no'.
2) The number of residents in one household (including self) before the disaster was the following: one (living alone), 2,807 ( $8.1 \%$ ); two, 8,511 ( $24.5 \%$ ); three, 6,890 ( $19.8 \%$ ); four, 5,790 ( $16.6 \%$ ); five, 4,155 (11.9\%); six, 3,377 ( $9.7 \%$ ); seven, 2,051 (5.9\%); eight, 811 (2.3\%); nine, 244 (0.7\%); and ten and above, 141 ( $0.4 \%$ ).
The current number of residents in one household was the following: one (living alone), 5,351 (15.0\%); two, 13,064 (36.6\%); three, 6,897 (19.3\%); four, 4,767 (13.4\%); five, 2,590 (7.3\%); six, $1,697(4.8 \%)$; seven, 913 ( $2.6 \%$ ); eight, 294 ( $0.8 \%$ ); nine, 87 ( $0.2 \%$ ); and ten and above, 47 (0.1\%).
3) About the current residence

3-1) For the current residence (multiple answers allowed), 4,049 lived in municipally subsidized rental housing, 1,869 in temporary housing, 1,608 in restoration public housing, 3,952 in rented houses or apartments, 735 in relative's houses, 24,243 in owned houses, and 506 in other kinds of habitats.
3-2) For the current evacuation status (question addressed to those who used to live in an area where evacuation was ordered and thereafter lifted), 7,923 ( $45.0 \%$ ) responded "living in the house at the original address," $4,506(25.6 \%)$ responded "living in a different address from the original, but in the same region where the evacuation order was lifted," and 5,192 (29.5\%) responded "not living in the region where the evacuation order was lifted (including occasionally visiting the original house)."
4) For the form of employment, $9,570(27.2 \%)$ were full-time or self-employed, $2,878(8.2 \%)$ were part-time, and 22,742 ( $64.6 \%$ ) were unemployed (including students and homemakers).
5) For how one sees their financial circumstances, 3,821 ( $10.6 \%$ ) answered 'tough,' 8,353 ( $23.2 \%$ ) answered 'slightly tough,' 21,548 ( $59.8 \%$ ) answered 'normal,' 1,672 (4.6\%) answered 'slightly comfortable,' and 617 ( $1.7 \%$ ) answered 'comfortable.'
6) Asked if they (or their spouse) were pregnant before the disaster, or if they were living together with their underage children (grandchild excluded), 5,013 (16.0\%) answered 'yes,' and 26,347 (84.0\%) answered 'no.'

Among those who answered 'yes,' 456 ( $9.1 \%$ ) answered they (or their spouse) were pregnant, 2,099 ( $41.9 \%$ ) answered they were living with their pre-school children, 1,829 (36.5\%) answered they were living with their primary school children, $890(17.8 \%)$ answered they were living with their middle school children, 1,320 ( $26.3 \%$ ) answered they were living with their underage children who had graduated from middle school. (Multiple answers allowed.)
7) Asked if they (or their spouse) were currently pregnant, or if they were currently living with their underage children (grandchild excluded), 4,049 (13.3\%) answered 'yes,' and 26,497 (86.7\%) answered 'no.'

Among those who answered 'yes,' 276 ( $6.8 \%$ ) answered they (or their spouse) were currently pregnant, $1,686(41.6 \%)$ answered they were living with their preschool children, 1,622 (40.1\%) answered they were living with their primary school children, 952 ( $23.5 \%$ ) answered they were living with their middle school children, and $1,012(25.0 \%)$ answered they were living with their underage children who had graduated from middle school. (Multiple answers allowed.)

## 13. Awareness of Health Effects Caused By Radiation (Q13)

1) Awareness of health effects caused by radiation is shown in Table 21.

Table 21. Awareness of health effects caused by radiation
(Upper row is the number of individuals/lower row is proportion)

|  |  | Possibility is very low | « | $\longrightarrow$ | Possibility is very high | Valid responses |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | How likely do you think health disorders (for example, cancer) will occur in the future due to the current radiation exposure? | 10,910 <br> (34.8\%) | $10,253$ <br> (32.7\%) | $5,793$ <br> (18.5\%) |  | 31,344 |
| 2 | How likely do you think health disorders will occur in future generations (children or grandchildren) due to the current radiation exposure? | $\begin{array}{r} 9,532 \\ (31.0 \%) \end{array}$ | $\begin{gathered} 10,142 \\ (32.9 \%) \end{gathered}$ | $\begin{array}{r} 6,424 \\ (20.9 \%) \end{array}$ | $\begin{array}{r} 4,685 \\ (15.2 \%) \end{array}$ | 30,783 |

2) When asked how frequently they experienced inconveniences in daily life due to the anxieties about radiation for the past month, $1,504(4.7 \%)$ answered 'frequently,' $4,345(13.6 \%)$ answered 'sometimes,' $6,670(20.8 \%)$ answered 'rarely,' and 19,519 (60.9\%) answered 'never.'

## 14. Sources of advice (Q14)

When asked if they knew anyone or any organization that they can consult regarding mental or physical issues caused by the Great East Japan Earthquake, 32,540 ( $89.1 \%$ ) answered 'yes,' and 3,966 (10.9\%) answered 'no.'
Breakdown of sources of advice for those who answered 'yes' is shown in Table 22.

Table 22. Break down of sources of advice

|  | Number |
| :--- | ---: |
| Family/relatives | 28,329 |
| Friends/acquaintances | 15,591 |
| Colleagues/superiors | 3,237 |
| Municipal consultation service (City public health bureau, health center, etc.) | 7,521 |
| Prefectural consultation service (Prefectural public health bureau/public health and <br> welfare office, etc.) | 1,757 |
| Mental health and welfare center | 788 |
| Fukushima Center for Disaster Mental Health | 1,004 |
| Visiting care/nursing care service organizations | 2,324 |
| Medical institutions such as psychosomatic medicine/psychiatry/neurology/mental clinics | 4,395 |
| Medical institutions other than the above (general internal medicine, surgical department, <br> ophthalmology, otorhinolaryngology, orthopedics, obstetrics and gynecology, etc. | 8,464 |
| Facilities related to religion such as temples, shrines, churches, etc. | 508 |
| Other | 248 |

(Multiple answers)

## Data from the FY 2016 Mental Health and Lifestyle Survey (Age group 0-3)

|  |  | Num |  | Proportion |
| :---: | :---: | :---: | :---: | :---: |
| Response methods | ( 798 valid responses ) | - Mailed Survey Sheets | 734 | 92.0\% |
|  |  | - On-line | 64 | 8.0\% |
| Sex | ( 798 valid responses ) | - Boys | 404 | 50.6\% |
| (Average age 1.9) |  | - Girls | 394 | 49.4\% |
| The address as of the time of survey | ( 798 valid responses ) | - Within the prefecture | 722 | 90.5\% |
|  |  | - Outside the prefecture | 76 | 9.5\% |
| Q1 Health condition | ( 782 valid responses ) | - Very good | 315 | 40.3\% |

# Mental Health and Lifestyle Survey for FY 2016 Summary of Support (Revised version) 

Reported on June 2018

## 1. Purpose

The "Mental Health and Lifestyle Survey" aims to provide a feedback mechanism so that results of the Fukushima Health Survey can be useful to residents for their better health management and to connect those who require mental health or lifestyle-related support to appropriate health/medical facilities.

## 2. Target Groups

Out of those who responded to the "Mental Health and Lifestyle Survey" for FY 2016, people deemed to require counseling/support by telephone or mail were identified as Targets.
This report also tabulates those who responded by 31 October 2017 and received support by 31 December of the same year.
Age 0-3 years: Targets born between April 2, 2013and April 1, 2016.
Age 4-6 years: Targets born between April 2, 2010 and April 1, 2013.
Primary School: Targets born between April 2, 2004 and April 1, 2010.
Middle School: Targets born between April 2, 2001 and April 1, 2004.
Adults: $\quad$ Targets born on or before April 1, 2001.
In this survey, "Children" refers to the people in the Target Group of middle school age and younger, and "Adults" refers to people in the target Group older than the foregoing.

## 3. Methods

### 3.1 Individual Notices of Results

Survey questionnaires for FY 2016 were distributed by mail in February 2017, and the results were sent in September and October to those who responded by 31 August 2017. We introduced our special call center for the "Mental Health and Lifestyle Survey" to provide more information related to the survey results, and posted "Frequently Asked Questions about the survey results" on our Japanese website. The items of results provided to the participants are as follows:

| Survey type | Items in the result |
| :--- | :--- |
| $\mathbf{0 - 3}$ years | Height, weight, diet (1 year olds and older), exercise (2 year olds and older), <br> bedtime |
| 4-6 years | Height, weight, diet, exercise, bedtime, behavioral difficulties and emotional <br> health (SDQ |
| Primary <br> school age | Height, weight, diet, exercise, bedtime, behavioral difficulties and emotional <br> health (SDQ) |
| Middle <br> school age | Height, weight, diet, exercise, sleep, behavioral difficulties and emotional <br> health (SDQ) |
| Adults | Obesity $\left(\mathrm{BMI}^{2}\right)$, diet, exercise, sleep, psychological distress scale $\left(\mathrm{Kb}^{3}\right)$ |

1) Strength and Difficulties Questionnaire. Mental health and behavioral screening scale for children.
2) Body Mass Index (calculated based on height and weight written in the survey forms)
3) Psychological distress scale which screens for general mental illness such as depression and anxiety.

In the results for children, standard height and weight by age in months at the time when they completed the survey forms were provided for reference.

### 3.2 Support by telephone and others

In accordance with the level of significance and urgency by selection criteria, our "Mental Health Support Team" that consists of Clinical Psychologists, Public Nurses, Medical Nurses, etc. provided Telephone Counseling. In Telephone Counseling, we inquired about their health status to assess current problems, and advised further examination at health/medical facilities when necessary.
As for mail support, we sent return postcards to confirm their wishes for telephone support and introduction of our "Mental Health and Lifestyle Survey" call center. Also for those deemed to require support pertaining to their lifestyle, a brochure encouraging lifestyle improvement was enclosed. The Telephone Counseling was provided to those who requested it in the return postcard, and to those who the "Mental Health Support Team" deemed necessary.
The criteria for support are as stipulated in (A) and (B) below.

## 4. Criteria to select the Support Targets

### 4.1 Telephone Counseling

## (A) Criteria by scored assessments:

- Children: SDQ ${ }^{* 4}$ score $\geq 20$,
${ }^{* 4}$ Since the SDQ is only applicable to those 4 years old and older, age $0-3$ were decided by other items than assessment scores.
- Adults: Those with K6 scores $\geq 15$, and those with K6 scores $13-14$ with PCL-4 ${ }^{* 5}$ scores $\geq 12$.
${ }^{* 5}$ PCL-4: Scale for problems or traumatic reactions associated with disaster experiences

## (B) Criteria by items other than score in scales:

- Children: those who were deemed to require urgent support out of a group identified by the contents of free-answer sections.
- Adults: those who meet the lifestyle conditions below:
-Of those who have previous history of hypertension (HT) or diabetes (DM) and not receiving medical treatments, BMI $\geq 27.5 \mathrm{~kg} / \mathrm{m}^{2}$ (HT/DM - BMI), or consume $\geq 42$ drinks in total per week (HT/DM•Excessive drinking) (Multiply the number of days per week by the average daily drinking volume).
-Consuming $\geq 42$ drinks per week with a CAGE score (screening tool for alcoholism) of 4 out of 4 (high-risk drinking).
- Those who were deemed to require urgent support out of a group identified based on the contents of free-answer sections.

### 4.2 Mail Support

## (A) Criteria by score in scales

- Children: SDQ score $\geq 16$ (criterion in initial screening ${ }^{11}$ ) who do not meet the foregoing criteria for Telephone Counseling.
- Adults: K6 score $\geq 10$ (criterion for anxiety disorder in initial screening ${ }^{2}$ ) or PCL-4 score $\geq 12$ who do not meet the foregoing criteria for telephone counseling.

## (B) Criteria by items other than score in scales

- Children: those who were deemed to not require urgent support out of a group identified by the contents of free-answer sections.
- Adults: those who meet the following conditions:
-not receiving necessary medical services while body weight increased more than $3 \mathrm{~kg} / \mathrm{y}$ and BMI $\geq 27.5$.
-consume $\geq 42$ drinks in total per week with a CAGE score of 2 or 3 .
-unsatisfied with the quality of sleep and currently depressed or inactive during the day.
-have a history of mental disorder and responded about their current hospital visits as none or not responding at all.
-those who were deemed not require urgent support out of a group identified by the contents of free-answer sections.

### 4.3 General Information by Mail (Sending a Booklet)

Except for the Support Targets of (4.1) and (4.2), we sent a booklet to those who met the criteria below.

- Adults: weight gain of $\geq 3 \mathrm{~kg} / \mathrm{y}, \mathrm{BMI} \geq 25.0$ and BMI $<27.5 \mathrm{~kg} / \mathrm{m}^{2}$ (Mild obesity).

Those who meet none of the above criteria, but with a CAGE score $\geq 2$.

## 5 Categories of supports and results

In telephone counseling support, we asked about health status and current problems.
According to the types of the support, we categorized the counseling sessions as "listened carefully," "recommended seeing a doctor," "advised lifestyle changes," "offered psychoeducation," "provided information (such as social resources)," and "miscellaneous."
The results of telephone counseling were categorized into four groups as shown in 5.1, "Follow-up 1," "Follow-up 2," "Follow-up 3," and "Declined."

As for the Continued Support, there are four categories as shown below: "Follow-up support," "referred to outside institutions," "mail support," and "directed to other departments."

### 5.1 Categories of Results

| Follow-up 1 | Targets confirmed to be improving or self-managing their problems. |
| :--- | :--- |
| Follow-up 2 | Targets not fully recovering from health problems, emotional aftermath of <br> the disaster, adjustment problems, etc. |
| Follow-up 3 | Targets whose status could not be confirmed. |
| Declined | Targets who clearly conveyed that they did not want support. |

### 5.2 Continued Support

| Follow-up support: | Targets requiring continued telephone counselling. |
| :--- | :--- |
| Referred to outside <br> institutions: | Targets required to be referred to municipal government or the Fukushima <br> Center for Disaster Mental Health. |
| Mail support | Targets were sent referral, list of registered general practitioners, <br> information of institutions outside the prefecture for support, and letters <br> providing information for registered doctors. |
| Directed to other <br> departments | Targets needing services related to the Basic Survey and/or Thyroid <br> Ultrasound Examination of FMU's Radiation Medical Science Center. |

## 6. Results

### 6.1 Providing the Results to Targets

The results were providing to 4,902 children in total, 795 for age $0-3,888$ for age 4-6, 2,220 for primary school children, and 999 middle school children. For adults, 37,275 results were informed, totaling 42,177 with the results of children.

### 6.2 Number of Support Targets and Supports Received

Of total 538 children identified as Support Targets, 202 needed telephone counseling and 336 required mail support. Of 336 Mail Support Targets, 13 were assessed to require telephone counseling.
Of total 8,655 adults identified as Support Targets; 2,557 needed telephone counselling and 6,098 required mail support. After receiving the mail support, 273 were assessed to require telephone counseling. The number of those with mild obesity as the criteria for sending a booklet was 330 and 1,243 met the criteria of CAGE scores. The total number to receive a booklet was 1,573 .
To those who were identified as Support Targets but could not be reached for telephone support and those who only met the booklet sending criteria (except for those who died), information was provided by sending booklet produced by Radiation Medical Science Center of FMU: Mental Health and Lifestyle Support.
Figure 1 shows the numbers of Support Targets and provided support. It excludes targets who only met the criteria for sending a booklet.
The percentages in the result table are rounded and may not total to $100 \%$.

1) Those who responded by 31 October 2017.
2) Those who received support by 31 December 2017
3) Those who indicated no desire for support in the return postcard.
4) The number includes 256 participants who required support by telephone counseling regarding lifestyle habits.
5) Such as those who preferred telephone support out of hours.

Figure 1: Number of Support Targets and provided supports

### 6.3 Telephone Support for Children

## (A) Characteristics of Children identified as Support Targets

Of all children who were Support Targets; 202 required telephone counseling and 13 were assessed to require telephone support as the results of mail support, totaling 215 . The status of children requiring support is per Table 1. As for gender and area distribution, there were more boys than girls and more from Fukushima than outside.

Table 1: Characteristics of children in Support Targets (By sex and area)

| Support Targets | Total 215 |  | $\begin{gathered} 0-3 \text { y ears } \\ 5 \end{gathered}$ |  | $\begin{gathered} 4-6 \text { years } \\ 38 \end{gathered}$ |  | Primary school age$114$ |  | Middle school age 58 |  |

Areas at the time of sending survey questionnaires in FY 2016

## (B)Status of Support Targets

Based on the results of survey, we conducted Telephone Counseling to identify current problems. As a result, 71 participants appeared to have problems, the most frequent case being "school-related issue," followed by "anger, irritation and violence," and "physical health problem." As for problems of parents, "school-related issue" came first, followed by "physical health problem" and "sleep".
In order to grasp the problems of participants more comprehensively, further interviews were carried out using question items designed with advice from doctors specialized in Child Psychiatry. The results are in Table 2. "Developmental problems" and "child-rearing anxiety" were raised the most. Also, 18 (15.8\%) were identified to be taking mental care.

Table 2: Status of participants who received telephone counseling

Proportions do not include the number of 'Unclear'.

## (C)The results of support

The results of telephone counseling are in Table 3. After the telephone support, 160 ( $88.4 \%$ ) were categorized as 'Follow-up 1,' 10 ( $5.5 \%$ ) were categorized as 'Follow-up 2,' 9 ( $5.0 \%$ ) were categorized as 'Follow-up 3,' and 2 ( $1.1 \%$ ) declined support.

Table 3: Results of telephone counseling

$$
\begin{array}{ll}
\text { Follow-up 1: } & \begin{array}{l}
\text { Participants confirmed to be improving or self-managing their problems. } \\
\text { Follow-up 2: }
\end{array} \\
\begin{array}{l}
\text { Participants not fully recovering from health problems, emotional aftermath of the } \\
\text { disaster, adjustment problems, etc. }
\end{array} \\
\text { Follow-up 3: } & \text { Participants whose status could not be confirmed. }
\end{array}
$$

The reasons for classifying as "Follow-up 2" are in Table 4. As for differences of problems among children and among parents, children have more mental health problems and school maladaptation while the parents raised issues about child rearing the most.

Table 4: Breakdown of the reasons for 'Follow-up 2'

| Number of 'Follow-up 2' | Total |  | 0-3 years |  | 4-6 years |  | Primary school age Middle school age |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| Provided information by phone | 2 (1.1\%) | 0 (0.0\%) | 0 (0.0\%) | 1 (1.0\%) | 1 (2.2\%) |
| Other (checked residents' condition) | 31 (17.1\%) | 0 (0.0\%) | 3 (9.4\%) | 19 (18.8\%) | 9 (20.0\%) |

The breakdown provides the total number.
Among those who needed continued support services, "Follow-up support," "referred to outside institution," and "directed to other departments" had 1 case each (Table 6).

Table 6: Continued support

| Support provided | Total 181 | $\begin{gathered} 0-3 \text { years } \\ 3 \end{gathered}$ | $\begin{gathered} \hline 4-6 \text { years } \\ 32 \end{gathered}$ | Primary school age $101$ | Middle school age 45 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Follow-up support | 1 (0.6\%) | 0 (0.0\%) | 1 (3.1\%) | 0 (0.0\%) | $0 \quad(0.0 \%)$ |
| Referred to outside institutions | 1 (0.6\%) | 0 (0.0\%) | 0 (0.0\%) | 1 (1.0\%) | 0 (0.0\%) |
| Mail support | 0 (0.0\%) | 0 (0.0\%) | 0 (0.0\%) | 0 (0.0\%) | 0 (0.0\%) |
| Directed to other departments | 1 (0.6\%) | $0 \quad(0.0 \%)$ | $0 \quad(0.0 \%)$ | 1 (1.0\%) | $0 \quad(0.0 \%)$ |

Follow-up support: Participants requiring continued telephone counselling.
Referred to outside institutions:
Participants required to be referred to municipal government or the Fukushima Center for Disaster Mental Health.
Mail support: Participants were sent referral, list of registered general practitioners, information of institutions outside the prefecture for support, and letters providing information for registered doctors.
Directed to other departments:
Participants needing services related to the Basic Survey and/or Thyroid Ultrasound Examination of FMU's Radiation Medical Science Centre.

### 6.4 Telephone Support for Adults

## 6.4-1 Support by telephone support criteria

## (A) Characteristics of Support Targets of Telephone Support

A total of 2,557 adults were identified as Support Targets for telephone counseling, of which 2,039 were identified by the scores, and 518 were assessed by items other than scores. Among the Support Targets, 2,127 ( $83.2 \%$ ) received telephone support.

The gender/age distributions of Support Targets are in Table 7. Overall, more females than males, and those in their 70s, had the largest number.

Table 7: Support Targets for telephone counseling (By sex and age group)

| Age group | Based on the scores |  |  |  |  | Based on the items other than scores |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Total | Male |  | Female |  | Total | Male |  | Female |  |
| 15-19 | 53 | 18 | (34.0\%) | 35 | (66.0\%) | 4 | 3 | (75.0\%) | 1 | (25.0\%) |

## (B) The status of Support Targets

Based on survey results, we conducted Telephone Counseling to identify current problems. As a result, 980 support targets appeared to have problems, the most frequent case being "physical health problem," followed by "sleep" and "depression".
The frequency and proportion of "physical health problem," "sleep," and "receiving status of medical care" identified during the counseling using checklists are in Table 9.
$1,048(55.1 \%)$ have physical health problems and 966 ( $53.2 \%$ ) have sleep problems.
As for receiving medical treatment, 318 (17.8\%) are visiting mental clinics/psychiatrists, 1,063 $(59.6 \%)$ are visiting medical facilities other than mental clinics or psychiatric offices.

## (C)The results of support

The results of telephone counseling are as Table 10. After the telephone counseling, 1,840 ( $86.5 \%$ ) were designated as 'Follow-up 1,' 183 ( $8.6 \%$ ) as 'Follow-up 2,' 56 ( $2.7 \%$ ) as 'Follow-up 3,' and $48(2.3 \%)$ as 'Declined Support'.

Table 10: Results of telephone counseling

|  | Total |  |  | Based on the scores |  | Items other than scores |  |  |
| :---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| Support provided | 2,127 |  |  | 1,686 |  |  | 441 |  |
| Follow-up 1 | 1,840 | $(86.5 \%)$ |  | 1,453 | $(86.2 \%)$ | 387 | $(87.8 \%)$ |  |
| Follow-up 2 | 183 | $(8.6 \%)$ |  | 149 | $(8.8 \%)$ | 34 | $(7.7 \%)$ |  |
| Follow-up 3 | 56 | $(2.6 \%)$ |  | 45 | $(2.7 \%)$ | 11 | $(2.5 \%)$ |  |
| Declined support | 48 | $(2.3 \%)$ |  | 38 | $(2.3 \%)$ | 10 | $(2.3 \%)$ |  |

Follow-up 1: Participants confirmed to be improving or self-managing their problems.
Follow-up 2: Participants not fully recovering from health problems, emotional aftermath of the disaster, adjustment problems, etc.
Follow-up 3: Participants whose status could not be confirmed.

The reasons for 'Follow-up 2' were as Table 11. 104 (56.8\%) for physical health problems, 116 ( $63.4 \%$ ) for mental health problems, 6 (3.3\%) for social maladaptation, 19 ( $10.4 \%$ ) for isolation.

Table 11: Breakdown of the reasons for 'Follow-up 2'

| Number of 'Follow-up 2' | $\begin{aligned} & \hline \text { Total } \\ & 183 \end{aligned}$ |  | Based on the scores$149$ |  | Items other than scores$34$ |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| Directed to other departments | 2 | $(0.1 \%)$ |  | 1 | $(0.1 \%)$ | 1 | $(0.2 \%)$ |  |  |

Follow-up support: Participants requiring continued telephone counselling.
Referred to outside institutions:
Participants required to be referred to municipal government or the Fukushima Center for Disaster Mental Health.
Mail support: Participants were sent referral, list of registered general practitioners, information of institutions outside the prefecture for support, and letters providing information for registered doctors.
Directed to other departments:
Participants needing services related to the Basic Survey and/or Thyroid Ultrasound Examination of FMU's Radiation Medical Science Center.

## 6.4-2 Telephone Counselling after Mail Support

## (A) Characteristics of the Support Target (among the mail support target)

We have provided telephone counseling to those who requested it in response to the mail support and those who the "Mental Health Support Team" deemed necessary from the contents of their responses.
Of 273 participants identified as telephone support targets, 225 were by assessment scores and 48 were by other criteria. Of those, 255 ( $93.4 \%$ ) received telephone counseling.

Gender/age distribution of the Support Targets is in Table 14. Overall, there were 132 males and 136 females. By age group, 70s had a largest number.

Table 14: Support Targets for telephone counseling among those who received mail support (By sex and age group)

| Age group | Based on the scores |  |  |  |  | Based on the items other than scores |  |  |  |  |

Areas at the time of sending survey questionnaires in FY 2016.

## (B) The status of Support Targets (among the mail support target)

Based on survey results, we conducted Telephone Counseling to identify current problems. As a result, 38 appeared to have problems, the most frequent case being "physical health problem," followed by "sleep" and "family matters."
The frequency and proportion of "physical health problem," "sleep," and "receiving status of medical care" identified during counseling with checklists are in Table 16.

115 (51.3\%) have physical health problems and 94 (45.4\%) have sleep problems.
As for receiving status of medical treatment, 24 (11.7\%) are visiting mental clinics/psychiatrists, 151 ( $73.7 \%$ ) are visiting medical facilities other than mental clinics or psychiatrists.

Follow-up support: Participants requiring continued telephone counselling.
Referred to outside institutions:
Participants required to be referred to municipal government or the Fukushima Center for Disaster Mental Health.
Mail support: Participants were sent referral, list of registered general practitioners, information of institutions outside the prefecture for support, and letters providing information for registered doctors.
Directed to other departments:
Participants needing services related to the Basic Survey and/or Thyroid Ultrasound Examination of FMU's Radiation Medical Science Centre.

## 6.4-3 Support by items (lifestyle) other than scores

## (A) Characteristics of Support Targets

Of total 256 identified as Support Targets, 157 on the basis of HT/DM • BMI, 65 by HT/DM • Excessive drinking, 7 by HT/DM • BMI • Excessive drinking, and 27 by high-risk drinking. Among the Support Targets, 189 (73.8\%) were male and 67 (26.2\%) were female. As for age distribution, those in their 60 s had the largest number which was 69 ( $27.0 \%$ ), followed by those in their 50s which was $61(23.8 \%)$ and those in their 40 s was 53 (20.7\%). For the area distribution, 204 (79.7\%) lived within Fukushima Prefecture and 52 (20.3\%) lived outside Fukushima (Table 21).

| 60-69 | 69 | (27.0\%) | 34 | (21.7\%) | 23 | (35.4\%) | 3 | (42.9\%) |  | (33.3\%) |
| 70-79 | 20 | (7.8\%) | 15 | (9.6\%) | 3 | (4.6\%) | 1 | (14.3\%) | 1 | (3.7\%) |
| 80- | 11 | (4.3\%) | 6 | (3.8\%) | 4 | (6.2\%) | 0 | (0.0\%) | 1 | (3.7\%) |
| Area of residence |  |  |  |  |  |  |  |  |  |  |
| Within Fukushima | 204 | (79.7\%) | 124 | (79.0\%) | 51 | (78.5\%) | 6 | (85.7\%) |  | (85.2\%) |
| Outside Fukushima | 52 | (20.3\%) | 33 | (21.0\%) | 14 | (21.5\%) | 1 | (14.3\%) |  | (14.8\%) |

Age groups are calculated on the basis of 1 April 2016.
Areas are at the time of sending survey questionnaires in FY 2016.

## (B) The status of support Targets

Telephone counselling was provided to 214 targets in total: 131 with 'HT/DM • BMI', 54 with 'HT/DM • Excessive drinking,' 7 with 'HT/DM • BMI • Excessive drinking,' and 22 with 'high-risk drinking.'
In the telephone counseling sessions, we asked how aware they were of the importance of exercising and diet, or risks from alcohol and smoking. Table 22 shows the results.

Table 22: Awareness of one's own lifestyle

| Support provided | HT/DM - BMI | HT/DM - Excessive drinking | HTDM - BM - Excessive drinking | High-risk drinking |
| :---: | :---: | :---: | :---: | :---: |
| Total 214 | 131 | 54 | 7 | 22 |
| Exercise | 71 (54.2\%) | 16 (29.6\%) | 3 (42.9\%) | 10 (45.5\%) |
| Dietary habits | 76 (58.0\%) | 22 (40.7\%) | 3 (42.9\%) | 10 (45.5\%) |
| Drinking, smoking | 29 (22.1\%) | 31 (57.4\%) | 6 6 $85.7 \%$ ) | 14 (63.6\%) |

Multiple answers allowed.

## (C) The results of support (other than scores)

At the first telephone support, we found out that 103 (48.1\%) had been receiving medical care. The number of those who require continued support, such as advice on lifestyle habits, was 111 (51.9\%) in total: 72 with 'HT/DM • BMI,' 24 with 'HT/DM • Excessive drinking,' 6 with 'HT/DM • BMI • Excessive drinking,' and 9 with 'high-risk drinking.' (Table 23.)

Table 23: Results of the first telephone counseling

| Support provided | $\begin{aligned} & \hline \text { Total } \\ & 214 \end{aligned}$ | $\begin{gathered} \text { HT/DM• BMI } \\ 131 \end{gathered}$ | HT/DM $\cdot$ Excessive drinking 54 | HT/DM • BMI • Excessive drinking $7$ | High-risk drinking 22 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| No follow-up support | 103 (48.1\%) | 59 (45.0\%) | 30 (55.6\%) | 1 (14.3\%) | 13 (59.1\%) |
| Follow-up support | 111 (51.9\%) | 72 (55.0\%) | 24 (44.4\%) | 6 (85.7\%) | 9 (40.9\%) |

Multiple answers allowed.

Among the 111 participants requiring follow-up support, we have provided follow-up support for $86(77.5 \%)$ in total: of which 51 with 'HT/DM $\cdot \mathrm{BMI}$,' 22 with 'HT/DM $\cdot$ Excessive drinking,' 5 with 'HT/DM • BMI • Excessive drinking,' and 8 with 'high-risk drinking.' The number of those who were confirmed to have sought professional help or made lifestyle changes was 62 ( $72.1 \%$ ) in total: 37 with 'HT/DM • BMI,' 15 with 'HT/DM • Excessive drinking,' 3 with 'HT/DM • BMI • Excessive drinking,' and 7 with 'high-risk drinking.' The breakdown of those who improved was: 29 by doctor examination, 50 by lifestyle improvement, and 19 by both of these (Table 24).

Multiple data allowed for improved content.

## 7. Summary

Frequently raised problems in telephone support for children are: "school related issues," "anger, irritation and violence," and "physical health problem" (parents raised "school related issues," "physical health problems," and "sleep"; for adults, "physical health problems," "sleep," and "depression" prevailed.
As for support provided to children, "listening carefully" was the most frequent and followed by "Psychological education". For adults, "listening carefully" was the most common, followed by "lifestyle instruction" and "recommended seeing a doctor".
As a result of telephone support, those categorized as "Follow-up 2 (Support Targets not fully recovering from health problems, emotional aftermath of the disaster, adjustment problems, etc.)" were $5.5 \%$ among children, declined from FY2015 survey ( $13.6 \%$ ). The result for adults was $8.6 \%$, declined from FY2015 survey ( $12.5 \%$ ). The mail support target was $5.9 \%$, declined from FY2015 survey ( $6.6 \%$ ).
The reasons for categorizing cases to "Follow-up 2" for children are "mental problem," "school maladjustment" (for guardians, "child rearing" was the most), for adults, "physical problem" and "mental problem" were the major reasons.
Where deemed necessary by telephone support, we moved on to "follow-up support" and "referred to outside institution" to continue watching over and confirming the status quo, and to connect cases to regional medical services. Especially, of those to whom we provided continued support based on lifestyle support standards, $70 \%$ showed changes such as visits to doctors and lifestyle improvement, indicating a certain level of effect of telephone support.
