# Implementation Status of the "Comprehensive Health Check," Fukushima Health Management Survey (FY2011-FY2021) 

## 1. Outline of the Comprehensive Health Check

## (1) Purpose

The Great East Japan Earthquake and the accident at TEPCO's Fukushima Daiichi Nuclear Power Plant led to a large-scale evacuation of residents. Many of the evacuees have since been concerned about their own health, due primarily to drastic changes in their lifestyle, such as diet and exercise habits, in addition to the loss of opportunity to undergo necessary health checks. In response to this situation, the Comprehensive Health Check (CHC) has been conducted to ascertain people's health status and use such data for the prevention of lifestyle diseases and early detection and treatment of diseases in general.

## (2) Coverage

- Residents registered in the covered area* from March 11, 2011 to April 1, 2012 (including those who moved out of the area)
- Residents registered in evacuation zones as of April 1 of the examination year
- Others, as warranted, based on Basic Survey results, even if the above conditions are not met
* Covered area: municipalities designated as evacuation zones in 2011

Hirono Town, Naraha Town, Tomioka Town, Kawauchi Village, Okuma Town, Futaba Town, Namie Town, Katsurao Village, Iitate Village, Minamisoma City, Tamura City, Kawamata Town, and parts of Date City (specifically recommended for evacuation)
(3) Health check items

Health check items differ according to age as follows.

| Age group | Health check items <br> $0-6$ years old <br> (preschool children and infants) <br> 7-15 years old <br> (from 1st to 9th grade) <br> Height, weight <br> [The items below are performed upon request] <br> CBC (red blood cell count, hematocrit, hemoglobin, platelet count, white <br> blood cell count and differential) |
| :---: | :--- |
|  | Height, weight, blood pressure, CBC (red blood cell count, hematocrit, <br> hemoglobin, platelet count, white blood cell count and differential ) <br> [The items below are performed upon request] <br> Blood biochemistry (AST, ALT, $\gamma$-GT, TG, HDL-C, LDL-C, HbA1c, plasma <br> glucose, serum creatinine, uric acid) |
| 16 years old and older | Height, weight, abdominal circumference (BMI), blood pressure, CBC <br> (red blood cell count, hematocrit, hemoglobin, platelet count, white |
| blood cell count and differential), urinanalysis (urine sugar, urine <br> protein, urine occult blood), blood biochemistry (AST, ALT, $\gamma$-GT, TG, <br> HDL-C, LDL-C, HbA1c, plasma glucose, serum creatinine, estimated <br> glomerular filtration rate [eGFR], uric acid) |  |
| *The underlined values are not routinely measured during specific <br> health checks. |  |

## 2. Implementation Status for FY2011 to FY2020

## (1) Methods

Health check venues are arranged as follows for the convenience of eligible persons.

| Age |
| :---: | :---: | :---: | :---: | :---: |
| group | Place of residence | Implementation method |
| :---: | | Number of cooperating health |
| :---: |
| check facilities in FY2020 |$\quad$| Tabulation category |
| :---: |

*2 Municipal health checks conducted outside the prefecture by cooperating facilities

## (2) Participation status

## A. Number of participants by method and by venue (in or outside the prefecture)

(a) Participants aged 15 or younger

The participation rate for FY2020 was $13.5 \%$, down by 2.7 points compared with a participation rate of $16.2 \%$ for FY2019. The major cause of this decrease in the number of participants is considered to be the spread of COVID-19, due to which people refrained from participation, for fear of infection.

|  | FY2011 | FY2012 | FY2013 | FY2014 | FY2015 | FY2016 | FY2017 | FY2018 | FY2019 | FY2020 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Final data as of Sept. 11, 2012 | $\begin{gathered} \text { Final data } \\ \text { as of } \\ \text { July } 5,2013 \\ \hline \end{gathered}$ | $\begin{gathered} \text { Final data } \\ \text { as of } \\ \text { Sept. 1, } 2014 \\ \hline \end{gathered}$ | $\begin{gathered} \text { Final data } \\ \text { as of } \\ \text { Sept. 1, } 2015 \\ \hline \end{gathered}$ | $\begin{gathered} \text { Final data } \\ \text { as of } \\ \text { Sept. 1, } 2016 \\ \hline \end{gathered}$ | Final data as of Dec. 31, 2017 | Final data as of Mar. 31, 2018 | Final data <br> as of <br> Mar. 31, 2019 | Final data as of Mar. 31, 2020 | Final data <br> as of <br> Mar. 31, 2021 |
| Eligible persons | 27,819 | 27,077 | 26,474 | 25,883 | 25,296 | 24,600 | 23,660 | 22,744 | 21,580 | 20,515 |
| Participants in pediatric health checks in Fukushima | 15,002 | 9,534 | 8,432 | 7,432 | 6,206 | 5,193 | 4,474 | 3,648 | 2,857 | 2,335 |
| Participants in pediatric health checks outside Fukushima | 2,949 | 2,283 | 1,822 | 1,792 | 1,403 | 1,226 | 929 | 834 | 650 | 444 |
| Number of those participating in both of the above | 17 | 37 | 6 | 8 | 6 | 6 | 0 | 3 | 3 | 0 |
| Total (excluding those participating in both) | 17,934 | 11,780 | 10,248 | 9,216 | 7,603 | 6,413 | 5,403 | 4,479 | 3,504 | 2,779 |
| Participation rate | 64.5\% | 43.5\% | 38.7\% | 35.6\% | 30.1\% | 26.1\% | 22.8\% | 19.7\% | 16.2\% | 13.5\% |

## (b) Participants aged 16 or older

The participation rate for FY 2020 was $16.0 \%$, down by 2.4 points compared with the participation rate of $18.4 \%$ for FY2019. The major cause of the decrease in the number of participants is considered to be the delay in the commencement of heath checks as the declaration of a state of emergency was issued due to the spread of COVID-19, and the eligible persons' reluctance to participate for fear of infection, even after the declaration was lifted.

|  | FY2011 | FY2012 | FY2013 | FY2014 | FY2015 | FY2016 | FY2017 | FY2018 | FY2019 | FY2020 |

| Participation rate | 30.9\% | 25.4\% | 23.0\% | 22.2\% | 21.7\% | 20.9\% | 20.5\% | 20.2\% | 18.4\% | 16.0\% |

[^0]
## B. Number of participants by age group

By age group, the numbers of participants aged 0 to 6,7 to 15 , and 40 to 64 have been decreasing year by year, while the number of participants aged 65 or older increased until FY2018 but has been decreasing thereafter. The number of participants aged 16 to 39 decreased until FY2019 but increased in FY2020.
By age group, the participation rate for participants aged 65 or older increased year by year until FY2019 but slightly decreased in FY2020, accounting for $53.5 \%$ of the total.

|  | Ages 0 to 6 | Ages 7 to 15 | Ages 16 to 39 | Ages 40 to 64 | Ages 65 or older |
| ---: | ---: | ---: | ---: | ---: | ---: |
| FY2011 | 6,462 | 11,481 | 14,762 | 23,651 | 16,726 |
| FY2012 | 4,365 | 7,437 | 8,480 | 19,553 | 18,642 |
| FY2013 | 3,802 | 6,429 | 6,536 | 16,922 | 18,969 |
| FY2014 | 3,328 | 5,840 | 5,843 | 15,594 | 19,166 |
| FY2015 | 2,655 | 4,903 | 5,354 | 14,748 | 19,559 |
| FY2016 | 2,057 | 4,315 | 4,632 | 13,386 | 19,768 |
| FY2017 | 1,647 | 3,712 | 4,309 | 12,677 | 20,299 |
| FY2018 | 1,220 | 3,169 | 3,979 | 11,948 | 20,337 |
| FY2019 | 959 | 2,457 | 2,984 | 10,095 | 19,529 |
| FY2020 | 783 | 1,936 | 3,157 | 8,791 | 16,853 |

*Percentages in the graph are rounded and the total may not be $100 \%$.

## 3. Implementation Status for FY2021 (as of December 31, 2021)

Covered population: 213,016 residents (19,440 persons aged 15 or younger, 193,576 persons aged 16 or older

(1) Eligible persons living in the prefecture

## A. For those aged 16 or older

CHC was conducted simultaneously with specific health checks and general health checks by municipalities by adding some health check items to regular health check items (hereinafter referred to as "add-on health checks") in the same manner as in the previous fiscal year in the 12 municipalities, excluding Date City.
Additionally, group health checks and individual health checks at designated health check facilities were also conducted from January 2022, covering eligible persons who could not receive add-on health checks (at 419 cooperative health check facilities for individual health checks).

## B. For those aged 15 or younger

In the same manner as in the previous fiscal year, pediatric health checks at designated health check facilities were conducted for a period of around six months from July to December 2021 (at 84 cooperative health check facilities).
(2) Eligible persons living outside the prefecture

After coordinating a venue for the eligible participants' prefecture of residence, we prepared and sent invitation for the health check starting from the end of June.

## (3) Results report and feedback

## A. Individual result report

The CHC individual results are mailed to each participant. In addition, face-to-face explanation of the results is offered to those aged 15 and under and their parents/guardians at the health check facilities where they received health checks.

## B. Preparation of a leaflet

When sending invitations for group or individual health checks to eligible persons aged 16 or older, a
leaflet compiling what has become clear from the results of the CHC is enclosed. The leaflet theme changes every year: it was "Lifestyle Diseases" for FY2017, "Diabetes" for FY2018, "Metabolic Syndrome" for FY2019, and "The Basis of Your Diet" for FY2020. For FY2021, under the theme of "Significance of Continued Participation in the CHC," the leaflet explains diseases that increased after the earthquake and causes thereof, etc. using the results of the CHC and reasons for promoting annual participation in the CHC.

## C. Preparation of Analysis reports on CHC results

We prepare CHC results analysis reports for each of the participating municipalities, showing temporal changes of their residents' health check results so that the residents can understand their health conditions.
We also perform additional analyses (e.g. analysis by age group and analysis of relationship between drinking, smoking, and exercising) upon request from these municipalities.

## D. Holding health seminars

In order to deepen residents' understanding of the importance of receiving health checks every year and to support them to continue receiving health checks, we hold health seminars at events such as health check results reporting meetings and health classes organized by municipalities. In health seminars, medical doctors give health lectures to residents of the participating municipalities, presenting results and analyses of the CHC, and specialists offer individual consultations and blood pressure and blood glucose measurements.

Health seminars conducted in FY2021 as of December 31, 2021

| Venue | Event name | Times | Contents |
| :---: | :---: | :---: | :---: |
| Naraha Town | Individual health consultation | 2 | - Individual consultation with health specialists <br> - Panel exhibition, leaflet distribution |
|  | General health check | 7 | - Panel exhibition |
| Katsurao Village | CHC results reporting meeting | 7 | - Individual consultation with health specialists <br> - Panel exhibition, leaflet distribution |
| Tamura City | Tamura City Health Promotion Seminar for Residents | 2 | - lecture by a medical doctor <br> - Individual consultation with health specialists <br> - Blood glucose measurement <br> - Panel exhibition |

Total 18

## (4) Efforts to raise health awareness through the CHC

We have continuously conducted the following activities, using the CHC as an opportunity to raise residents' health awareness in the face of changing living conditions after a lapse of time since the Great East Japan Earthquake.

## A. Publicity efforts

We have requested that municipal and prefectural governments run notices of the CHC in their public relations magazines to encourage as many residents as possible to receive health checks for prevention and/or treatment of diseases. We have also prepared posters and flyers to promote routine health checks and requested that medical facilities post them on the walls of their premises.

## B. Use of the Fukushima Kenmin App

The Fukushima Kenmin App is a smartphone application developed by the prefectural government to promote the health of Fukushima residents. As a part of our efforts to encourage residents to take interest in their own health and improve their lifestyle habits, such as starting and continuing exercise routines using the Kenmin App, we enclose a Kenmin App flyer in invitations to individual or group health checks for those aged 16 or older and award points for the Kenmin App (100 points with an invitation, 200 points with a result report).

## C. Securing venues for group health checks

Since the beginning of the CHC program, we have endeavored to secure health check venues in locations convenient to residents, for example, by setting up group health check venues in areas where there are many eligible residents. With the lifting of the evacuation orders, we have also set up new venues in the former evacuation zones and changed locations of venues in the area where there are only a small number of eligible residents.

## D. Efforts to deepen residents' understanding of health

We prepared a pamphlet entitled "The Health Check is Your Body's Report Card," which summarizes how to read health check results, explains diseases and preventive methods, and emphasizes the necessity of health checks. The pamphlet was used as a textbook in our health seminars.

# Report on the Results of the FY2020 Comprehensive Health Check Fukushima Health Management Survey (Participants Aged 15 or Younger) 

## < Supplementary Notes >

* Pediatric Health Checks were conducted during the following period.
FY2011 : January to March 2012

FY2012 to FY2020 : July to December of each fiscal year

* Percentages of obese participants were evaluated using BMI Standard Deviation Scores (BMI SDS), which were calculated based on heights and weights of the participants measured periodically at ages from 0 to 15 , and the results from FY2011 to FY2020 were compared.
* Results of blood tests vary substantially by age, but since participants were divided broadly into two age groups, 0 to 6 years and 7 to 15 years, year-by-year comparisons are not possible and definitive conclusions cannot be drawn.
* Rules for describing tabulation results are the same as those used for Vital Statistics in Japan by the Ministry of Health, Labour and Welfare, including this nomenclature:

When there is no data: -
When the ratio is minor (lower than 0.05 ): $0.0 \%$

* Reference materials

## 2．Explanation of the Graphs

A Body Mass Index Standard Deviation Score（BMI SDS）was calculated from height and weight and those with a BMI－SDS of 2 or higher were classified as obese．

## 3．Action Threshold

| Item | Obese |
| :---: | :---: |
| BMI－SDS | $\geq 2 \mathrm{SD}$ |

＊When evaluating the physical constitution of Japanese children，it is considered appropriate to use thresholds based on the anthropometric data published by the Ministry of Health，Labour and Welfare and the Ministry of Education，Culture，Sports， Science and Technology in FY2000，as the standard values（＂Fundamental Concept for the Evaluation of Japanese Children＇s Physical Constitution＂prepared by the Joint Committee for Standard Values of the Japanese Society for Pediatric Endocrinology and the Japanese Association for Human Auxology）．
In this report，the standard values calculated based on the FY2000 measurement results were used．

## Physical Exam: Blood Pressure

## 1. Results

The percentage of boys with systolic blood pressures of 140 mmHg or over was the highest in FY2011 but showed a downward trend thereafter, while no specific trend was observed in the percentage of boys with diastolic blood pressures of 90 mmHg or over. The percentage of girls with systolic blood pressures of 140 mmHg or over showed no substantial changes. The percentage of girls with diastolic blood pressures of 90 mmHg or over had shown no substantial changes until FY2019 but showed an increase in FY2020.

The percentage of boys with systolic blood pressures of 135 mmHg or over was the highest in FY2011 and varied up and down thereafter. The percentage of boys with diastolic blood pressures of 80 mmHg or over was the highest in FY2011, showed a declining trend thereafter until FY2018, but slightly increased through FY2020.
The percentage of girls with systolic blood pressures of 135 mmHg or over had shown no substantial changes from FY2011 to FY2019, but showed an upward trend in FY2020. The percentage of girls with diastolic blood pressures of 80 mmHg or over was the highest in FY2011, varied up and down thereafter, and slightly increased through FY2020.

## 2. Explanation of the Graphs

In the Guidelines for the Management of Hypertension (Japanese Society of Hypertension, 2019), systolic blood pressures of 140 mmHg or over and diastolic blood pressures of 90 mmHg are action values used for group and individual health checks for those aged 16 or older; systolic blood pressures of 135 mmHg or over and diastolic blood pressures of 80 mmHg or over are action values for higher-grade elementary school students.

## 3. Reference Intervals for Blood Pressure by Age Group and by Sex

| Age group | Systolic blood pressure level ( mmHg ) | Diastolic blood pressure level ( mmHg ) |
| :---: | :---: | :---: |
| Infants | $\geq 120$ | $\geq 70$ |
| Elementary school: Lower graders | $\geq 130$ | $\geq 80$ |
| Higher graders | $\geq 135$ | $\geq 80$ |
| Junior high school: Boys | $\geq 140$ | $\geq 85$ |
| Girls | $\geq 135$ | $\geq 80$ |
| High school | $\geq 140$ | $\geq 85$ |

## Peripheral Blood Test: Red Blood Cells, Hemoglobin, Hematocrit

## 1. Results

There were no substantial changes in red blood cell counts, hemoglobin, or hematocrit for either boys or girls in any age group.

2. Explanation of the Graphs

The graphs show changes in the average values of red blood cell counts, hemoglobin levels, and hematocrit levels.

## 3. Reference Intervals

| Age | Red blood cells <br> $\left(\times 10^{12} / \mathrm{L}\right)$ | Hemoglobin <br> $(\mathrm{g} / \mathrm{dL})$ | Hematocrit (\%) |
| :--- | :---: | :---: | :---: |
| At birth | $5.25 \pm 0.40$ | $16.6 \pm 1.5$ | $53 \pm 4.5$ |
| 1 day old | $5.14 \pm 0.60$ | $19.0 \pm 2.0$ | $58 \pm 5.5$ |
| 1 week old | $4.86 \pm 0.60$ | $17.9 \pm 1.5$ | $56 \pm 6.0$ |
| 1 month old | $4.10 \pm 0.60$ | $14.2 \pm 2.0$ | $43 \pm 6.0$ |
| 3 months old | $3.70 \pm 0.35$ | $11.3 \pm 1.0$ | $33 \pm 3.0$ |
| 6 months old | $4.60 \pm 0.35$ | $12.3 \pm 1.0$ | $36 \pm 3.0$ |
| 12 months old | $4.60 \pm 0.40$ | $11.6 \pm 0.75$ | $36 \pm 1.5$ |
| Ages $1-4$ | $4.70 \pm 0.35$ | $12.6 \pm 0.5$ | $38 \pm 1.5$ |
| Ages $4-12$ | $4.80 \pm 0.30$ | $13.0 \pm 1.0$ | $40 \pm 2.5$ |
| Adult males | $5.40 \pm 0.35$ | $16.0 \pm 1.0$ | $47 \pm 3.0$ |
| Adult females | $48.0 \pm 0.30$ | $14.0 \pm 1.0$ | $42 \pm 2.5$ |

[^2]
## Peripheral Blood Test: Platelet Count

## 1. Results

There were no substantial changes in platelet counts for either boys or girls in any age group.

| $\begin{gathered} (103 / \mu \mathrm{L}) \\ 400.0 \end{gathered}$ | Changes in percentages of those with the average platelet count ( $103 / \mu \mathrm{L}$ ) (boys and girls) |  |  |  |  |  |  |  |  |  |

## Liver Function: AST, ALT, $\gamma$-GT

1. Results

Liver dysfunction was found more often among boys than among girls in all fiscal years. The percentages showed no substantial changes for either boys or girls.

## 2. Explanation of the Graphs

An AST level of $31 \mathrm{U} / \mathrm{L}$ or over, an ALT level of $31 \mathrm{U} / \mathrm{L}$ or over, and a $\gamma$-GT level of $51 \mathrm{U} / \mathrm{L}$ or over are action criteria used for group and individual health checks for those aged 16 or older.

## 3. Reference Intervals

## AST(GOT) (U/L)

| Age | Males | Females |
| :---: | :---: | :---: |
| 1 month old | $19-61$ | $20-71$ |
| 6 months old | $25-85$ | $22-76$ |
| Aged 1 | $23-51$ | $22-50$ |
| Aged 3 | $20-45$ | $20-44$ |
| Aged 6 | $17-39$ | $16-38$ |
| Aged 12 | $14-33$ | $12-30$ |
| Adults | 30 or lower |  |

ALT(GPT) (U/L)

| Age | Males | Females |
| :---: | :---: | :---: |
| 1 month old | $10-50$ | $11-68$ |
| 6 months old | $12-62$ | $10-63$ |
| Aged 1 | $5-25$ | $5-31$ |
| Aged 3 | $4-24$ | $5-27$ |
| Aged 6 | $4-23$ | $4-25$ |
| Aged 12 | $3-20$ | $3-18$ |
| Adults | 30 or lower |  |

$\boldsymbol{\gamma}$-GT(U/L)

|  | Males | Females |
| :---: | :---: | :---: |
| Adults | $0-50$ | $0-30$ |
| From children to <br> young adults | $\gamma$-GT levels normally reach adult values <br> 5 to 6 months after birth. |  |
| Newborns | 5 to 6 times the normal upper limit |  |

Source: Clinical Management of Laboratory Data in Pediatrics 2017 (2 ${ }^{\text {nd }}$ edition)

## Lipids: LDL Cholesterol, Triglyceride, HDL Cholesterol

## 1. Results

The percentage of boys with LDL-C levels of $140 \mathrm{mg} / \mathrm{dL}$ or over was variable with a slight downward trend. There were no substantial changes in the percentage of girls with LDL-C levels of $140 \mathrm{mg} / \mathrm{dL}$ or over. The percentage of boys with triglyceride levels of $140 \mathrm{mg} / \mathrm{dL}$ or over showed an upward trend from FY2011 to FY2019, but decreased in FY2020. There were no substantial changes in the percentage of girls with triglyceride levels of $140 \mathrm{mg} / \mathrm{dL}$ or over.
There were also no substantial changes in the percentage of boys with HDL-C levels lower than $40 \mathrm{mg} / \mathrm{dL}$, while the percentage of girls with HDL-C levels lower than $40 \mathrm{mg} / \mathrm{dL}$ was variable with a downward trend in FY2020.

## 2. Explanation of the Graphs

Determination of hyperlipidemia was based on the following reference intervals.
3. Reference intervals for diagnosing hyperlipidemia for children (elementary and junior high school students, fasting blood sampling)

| LDL cholesterol (LDL-C) | $\geq 140 \mathrm{mg} / \mathrm{dL}$ |
| :--- | :---: |
| Triglycerides (TG) | $\geq 140 \mathrm{mg} / \mathrm{dL}$ |
| HDL cholesterol (HDL-C) | $<40 \mathrm{mg} / \mathrm{dL}$ |

[^5]
## Blood Glucose: Fasting Blood Glucose, HbA1c

## 1. Results

Both for boys and girls, the percentages of those whose fasting blood glucose level was $100 \mathrm{mg} / \mathrm{dL}$ or over hit a peak in FY2011, decreased in FY2012, and maintained almost the same levels thereafter.
There were no substantial changes in the percentage of those with fasting blood glucose level of $126 \mathrm{mg} / \mathrm{dL}$ or over for either boys or girls.
The percentage of those with HbA1c levels of $5.6 \%$ or over cycled up and down both for boys and girls.
There were also no substantial differences in the percentages of those whose HbA1c level was $6.5 \%$ or over between boys and girls, and the percentages remained unchanged both for boys and girls.

## 2. Explanation of the Graphs

Determinations of the existence of a high blood glucose level (fasting blood glucose level of $100 \mathrm{mg} / \mathrm{dL}$ or over and HbA1c level of $5.6 \%$ or over) and diabetes (fasting blood glucose level of $126 \mathrm{mg} / \mathrm{dL}$ or over and HbA1c level of $6.5 \%$ or over) were based on the following reference intervals, applicable to children and adults.

## 3. Reference Intervals

Classification and determination criteria based on fasting blood glucose level and through 75g 0GTT

|  | Measurement time |  |  | Classification |
| :---: | :---: | :---: | :---: | :---: |
|  | Fasting |  | 2-hours postprandial |  |
| Blood glucose <br> (Venous plasma level) | $126 \mathrm{mg} / \mathrm{dL}$ or over | 4 or $\triangle$ | $200 \mathrm{mg} / \mathrm{dL}$ or over | Diabetes |
|  | Intermediate | es, neither | tic nor normal | Borderline |
|  | Lower than $110 \mathrm{mg} / \mathrm{dL}$ | (4) and $\square$ | Lower than $140 \mathrm{mg} / \mathrm{dL}$ | Normal |

(i) Early morning fasting blood glucose level: $126 \mathrm{mg} / \mathrm{dL}$ or over
(ii) Blood glucose level after 2-hour 75g OGTT: $200 \mathrm{mg} / \mathrm{dL}$ or over
(iii) Casual blood glucose level: $200 \mathrm{mg} / \mathrm{dL}$ or over
(iv) HbA1c level: 6.5\% or over
(v) Early morning fasting blood glucose level: Lower than $110 \mathrm{mg} / \mathrm{dL}$
(vi) Blood glucose level after 2-hour 75g OGTT: Lower than $140 \mathrm{mg} / \mathrm{dL}$

Blood glucose levels matching any of (i) to (iv) are diagnostic of diabetes.

- Intermediate blood glucose values indicate a "borderline" condition that is neither diabetic nor normal.

## Renal Function (Serum Creatinine)

## 1. Results

The percentage of children having stage 2 or higher chronic kidney disease showed no specific trend from FY2011 to FY2020 for either boys or girls.

## 2. Explanation of the Graph

The graph shows the percentages of children who were diagnosed as having stage 2 or higher chronic kidney disease, based on their serum creatinine levels and the following reference intervals.

## 3. Reference Intervals

Table for determining chronic kidney disease (CKD) stages based on serum creatinine levels ( $\mathrm{mg} / \mathrm{dL}$ )

| Age | Stage 2 | Stage 3 | Stage 4 | Stage 5 |
| :---: | :---: | :---: | :---: | :---: |
| 7 | $0.50-$ | $0.75-$ | $1.49-$ | $2.97-$ |
| 8 | $0.54-$ | $0.81-$ | $1.61-$ | $3.21-$ |
| 9 | $0.55-$ | $0.83-$ | $1.65-$ | $3.29-$ |
| 10 | $0.55-$ | $0.83-$ | $1.65-$ | $3.29-$ |
| 11 | $0.61-$ | $0.91-$ | $1.81-$ | $3.61-$ |

| Age | Stage 2 |  | Stage 3 |  | Stage 4 |  | Stage 5 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## Uric Acid

## 1. Results

The percentage of boys with uric acid of $7.1 \mathrm{mg} / \mathrm{dL}$ or over slightly increased in FY2020, compared with the percentage in FY2011, but the percentage of girls with uric acid of $7.1 \mathrm{mg} / \mathrm{dL}$ or over showed no substantial changes.
There were no substantial changes in the percentage of boys with uric acid of $7.9 \mathrm{mg} / \mathrm{dL}$ or over.
The percentage of girls with uric acid of $5.6 \mathrm{mg} / \mathrm{dL}$ or over was cyclic and slightly decreased in FY2020.

## 2. Explanation of the Graphs

Determination of hyperuricemia was based on the following reference intervals.

## 3. Reference Intervals

| Definition of hyperuricemia in the "Guidelines for the Management <br> of Hyperuricemia and Gout" by the Japanese Society of Gout and Uric <br> \& Nucleic Acids. | Uric acid: $7.1 \mathrm{mg} / \mathrm{dL}$ or higher |
| :--- | :--- |
| Values exceeding the upper limits of the common reference intervals <br> established by the Japanese Committee for Clinical Laboratory <br> Standards | Uric acid <br> Boys: $7.9 \mathrm{mg} / \mathrm{dL}$ or higher <br> Girls: $5.6 \mathrm{mg} / \mathrm{dL}$ or higher |

# Report on the Results of the FY2020 Comprehensive Health Check Fukushima Health Management Survey (Participants Aged 16 or Older) 

[^6]
## Physical Exam: BMI

## 1. Results

Compared with the results for FY2016, the percentage of males with BMI of $25 \mathrm{~kg} / \mathrm{m}^{2}$ or over increased in FY2017 for all age groups, with no substantial changes thereafter to FY2020, except for those aged 40 to 64, which showed a slight increase in FY2020.

The percentage of females with BMI of $25 \mathrm{~kg} / \mathrm{m}^{2}$ or over showed an upward trend among those aged 16 to 39 from FY2011 to FY2019 but decreased slightly in FY2020. The same percentage increased slightly among those aged 40 to 64 and decreased slightly among those aged 65 or older in FY2020 compared with FY2011.

## 2. Explanation of the Graphs

A BMI was calculated based on measured heights and weights and those with a BMI level of $25 \mathrm{~kg} / \mathrm{m}^{2}$ or over were classified as obese.

[^7]
## 3. Reference Intervals and Action Thresholds

Degrees of obesity

| BMI (kg/m²) | Classification | WHO standards |
| :---: | :---: | :---: |
| < 18.5 | Underweight | Underweight |
| $\geq 18.5$ and < 25 | Normal weight | Normal range |
| $\geq 25$ and < 30 | Obese (level 1) | Pre-obese |
| $\geq 30$ and <35 | Obese (level 2) | Obese class I |
| $\geq 35$ and < 40 | Obese (level 3) | Obese class II |
| $\geq 40$ | Obese (level 4) | Obese class III |

Note 1) Obese persons (BMI $\geq 25$ ) are not necessarily medically required to reduce weight.
The standard weight (ideal weight) is obtained by multiplying the square of the height ( m ) by 22 (Standard weight $(\mathrm{kg})=$ Height $(\mathrm{m})^{2} \times 22$ ), based on a BMI of 22 , which is supposed to pose the least risk of disease.
Note 2) BMI $\geq 35$ is defined as severe obesity.
Source: "Guidelines for the Management of Obesity Disease 2016" by the Japan Society for the Study of Obesity

## Physical Exam: Abdominal Circumference

## 1. Results

The percentage of males with abdominal circumference of 85.0 cm or over decreased among those aged 16 to 39 from FY2011 to FY2013, remained almost the same from FY2014 onward, but showed an upward trend in FY2020.

The percentage of females with abdominal circumference of 90.0 cm or over increased among those aged 40 to 64 in FY2020 compared with the FY2011 level.

## 2. Explanation of the Graphs

Levels of the waist circumference (abdominal circumference), which serve as one of the diagnostic criteria for metabolic syndrome, were evaluated based on the following reference intervals.

## 3. Reference Intervals

Diagnostic criteria for metabolic syndrome

| Visceral fat (intra-abdominal fat) accumulation |  |
| :--- | :--- |
| Waist circumference | Males $\geq 85 \mathrm{~cm}$ <br> Females $\geq 90 \mathrm{~cm}$ |
| (Visceral fat area: Equivalent to $\geq 100 \mathrm{~cm}^{2}$ for both males and females) |  |
| Two more of the following, in addition to the above |  |
| Hypertriglyceridemia | $\geq 150 \mathrm{mg} / \mathrm{dL}$ |
| and/or |  |
| Hypo-HDL cholesterolemia | $<40 \mathrm{mg} / \mathrm{dL}$ for both males and females |
| Systolic blood pressure | $\geq 130 \mathrm{mmHg}$ |
| and/or | $\geq 85 \mathrm{mmHg}$ |
| Fasting hyperglycemia | $\geq 110 \mathrm{mg} / \mathrm{dL}$ |

Source: "Definition and Diagnostic Criteria for Metabolic Syndrome (2005)" by the Metabolic Syndrome Diagnostic Standards Review Committee

## Physical Exam: Blood Pressure

## 1. Results

The percentage of those with systolic blood pressure levels of 140 mmHg or over decreased both among males and females aged 40 or older from FY2011 to FY2014. These percentages showed an upward trend from FY2015 to FY2016, decreased thereafter until FY2019, and showed an upward trend again in FY2020.

The percentage of those with diastolic blood pressure levels of 90 mmHg or over decreased both among males and females aged 40 or older from FY2011 to FY2014, remained almost the same from FY2015 onward, and showed an upward trend again in FY2020.

## 2. Explanation of the Graphs

Determinations of systolic hypertension and diastolic hypertension were based on the following reference intervals.

## 3. Reference Intervals

Classification of adults' blood pressure levels

| Classification | Office blood pressure (mmHg) |  |  | Home blood pressure ( mmHg ) |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Systolic BP |  | Diastolic BP | Systolic BP |  | Diastolic BP |
| Normal BP | $<120$ | and | $<80$ | $<115$ | and | $<75$ |
| High normal BP | 120-129 | and | $<80$ | 115-124 | and | $<75$ |
| High BP | 130-139 | and/or | 80-89 | 125-134 | and/or | 75-84 |
| Level 1 hypertension | 140-159 | and/or | 90-99 | 135-144 | and/or | 85-89 |
| Level 2 hypertension | 160-179 | and/or | 100-109 | 145-159 | and/or | 90-99 |
| Level 3 hypertension | $\geq 180$ | and/or | $\geq 110$ | $\geq 160$ | and/or | $\geq 100$ |
| (Isolated) systolic hypertension | $\geq 140$ | and | < 90 | $\geq 135$ | and | $<85$ |

## Urine Test: Urine Sugar, Urine Protein, Urine Occult Blood

## 1. Results

The percentage of those with a urine sugar level of $1+$ or over showed an upward trend among those aged 40 or older from FY2015.

The percentage of those with a urine protein level of $1+$ or over increased among those aged 16 to 39 and those aged 65 or older from FY2011 to FY2020.

The percentage of those with a urine occult blood level of $1+$ or over decreased among those aged 40 or older from FY2011 to FY2020.

## 2. Explanation of the Graphs

Determination of the existence of abnormalities in urine test results was based on the following reference intervals.

## 3. Screening Values (Diagnostic criteria used for group and individual health checks)

| Item | Expected | Action Threshold | Abnormality |
| :---: | :---: | :---: | :---: |
| Urine sugar | $(-)$ | $( \pm)$ | $(+)$ or over |
| Urine protein | $(-)$ | $( \pm)$ | $(+)$ or over |
| Urine occult blood | $(-)$ | $( \pm)$ | $(+)$ or over |

## Peripheral Blood Test: Red Blood Cells, Hemoglobin, Hematocrit

## 1. Results

The average red blood cell count and the average hemoglobin level decreased for all age groups from FY2011 to FY2012, and remined almost the same thereafter.

The percentage of males with hemoglobin levels of $13.0 \mathrm{~g} / \mathrm{dL}$ or lower increased among those aged 65 or older from FY2011 to FY2012 but remained flat thereafter. The percentage of females with hemoglobin levels of $12.0 \mathrm{~g} / \mathrm{dL}$ or lower increased among those aged 65 or older from FY2011 to FY2012 and then fluctuated up and down thereafter.

There were no substantial changes in hematocrit levels in any age groups.

## 2. Explanation of the Graphs

The graphs show changes in average values of red blood cell counts, hemoglobin levels, and hematocrit levels.
The WHO standards for anemia are $13.0 \mathrm{~g} / \mathrm{dL}$ or lower for males and $12.0 \mathrm{~g} / \mathrm{dL}$ or lower for females.

## 3. Reference Intervals

| Item | Unit |  | Lower reference limit | Upper reference limit |
| :---: | :---: | :---: | :---: | :---: |
| Red blood cell count | $10^{6} / \mu \mathrm{L}$ | Male | 4.35 | 5.55 |
|  |  | Female | 3.86 | 4.92 |
| Hemoglobin | $\mathrm{g} / \mathrm{dL}$ | Male | 13.7 | 16.8 |
|  |  | Female | 11.6 | 14.8 |
| Hematocrit | \% | Male | 40.7 | 50.1 |
|  |  | Female | 35.1 | 44.4 |

Source: "Guidelines for Clinical Laboratory Tests 2018 (JSLM2018)" by the Japanese Society of Laboratory Medicine

## Peripheral Blood Test: Platelet Count

## 1. Results

There were no substantial changes in the average platelet count from FY2011 to FY2020 in any age group.

## 2. Explanation of the Graph

The graph shows changes in average values of platelet counts.
3. Reference Intervals and Action Thresholds (Diagnostic criteria used for group and individual health checks)

| Item Diagnosis | Reference Interval | Action Thresholds |  | Abnormality |  | Unit |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Number of <br> blood platelets | $130-369$ | $90-129$ | $370-449$ | 89 or <br> lower | 450 or <br> over | $\times 10^{3} / \mu \mathrm{L}$ |

## Peripheral Blood Test: White Blood Cell Count and Differential

## 1. Results

There were no substantial changes in the average white blood cell count from FY2011 to FY2020 in any age group.

There were also no substantial changes in the average neutrophil, lymphocyte, monocyte and eosinophil counts from FY2011 to FY2020 in any age group. The average basophil count remained almost the same from FY2012 to FY2020 in all age groups.

## 2. Explanation of the Graphs

The graphs show changes in average values of white blood cell counts and differentials.
3. Reference Intervals and Action Thresholds (Diagnostic criteria used for group and individual health checks)

| Item $\quad$ Diagnosis |  | Reference Interval | Action Thresholds |  | Abnormality |  | Unit |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Number of white blood cells |  | 4.0-9.5 | 3.0-3.9 | 9.6-11.0 | 2.9 or lower | 11.1 or over | $\times 10^{3} / \mu \mathrm{L}$ |
| Differential <br> Leucocyte <br> Counts <br> (DLCs, <br> Reference) | Neutrophils | 40.0-75.0 |  |  |  |  | \% |
|  | Lymphocytes | 20.0-55.0 |  |  |  |  |  |
|  | Monocytes | 0-12.0 |  |  |  |  |  |
|  | Eosinophils | 0-10.0 |  |  |  |  |  |
|  | Basophils | 0-3.0 |  |  |  |  |  |

## Liver Function: AST, ALT, $\boldsymbol{\gamma}$-GT

## 1. Results

The percentages of those with AST of $31 \mathrm{U} / \mathrm{L}$ or over, those with ALT of $31 \mathrm{U} / \mathrm{L}$ or over, and those with $\gamma$-GT of $51 \mathrm{U} / \mathrm{L}$ or over showed no substantial changes in any age group.

## 2. Explanation of the Graphs

Determination of hepatic dysfunction was based on the following reference intervals.
3. Reference Intervals and Action Thresholds (Diagnostic criteria used for group and individual health checks)

| Item | Reference Interval | Action Threshold | Abnormality | Unit |
| :---: | :---: | :---: | :---: | :---: |
| AST (GOT) | 30 or lower | $31-50$ | 51 or over | U/L |
| ALT (GPT) | 30 or lower | $31-50$ | 51 or over | U/L |
| $\gamma$-GT | 50 or lower | $51-100$ | 101 or over | U/L |

## Lipids: LDL Cholesterol, Triglyceride, HDL Cholesterol

## 1. Results

The percentages of those with LDL-C of $140 \mathrm{mg} / \mathrm{dL}$ or over and those with triglycerides of $150 \mathrm{mg} / \mathrm{dL}$ or over slightly decreased among those aged 65 or older from FY2011 to FY2012, but remained almost the same thereafter.

The percentages of those with HDL-C below $40 \mathrm{mg} / \mathrm{dL}$ were lower in FY2020 in all age groups compared with the levels in FY2011.

## 2. Explanation of the Graphs

Determination of hyperlipidemia was based on the following reference intervals.

## 3. Reference Intervals

Diagnostic criteria for hyperlipidemia (fasting blood sampling)

| LDL cholesterol | $140 \mathrm{mg} / \mathrm{dL}$ or over | Hyper-LDL-cholesterolemia |
| :---: | :---: | :---: |
|  | $120-139 \mathrm{mg} / \mathrm{dL}$ | Borderline hyper-LDL-cholesterolemia |
| HDL cholesterol | Lower than $40 \mathrm{mg} / \mathrm{dL}$ | Hypo-HDL-cholesterolemia |
| Triglycerides (neutral fats) | $150 \mathrm{mg} / \mathrm{dL}$ or over | Hypertriglyceridemia |

[^8]
## Blood Glucose (Fasting Blood Glucose, HbA1c)

## 1. Results

Among males and females aged 65 or older, the percentages of those with fasting blood glucose of $100 \mathrm{mg} / \mathrm{dL}$ or over decreased from FY2011 to FY2012, but showed slight increases thereafter until FY2020.

The percentage of males aged 65 or older with fasting blood glucose of $126 \mathrm{mg} / \mathrm{dL}$ or over was on a downward trend from FY2011 to FY2012, but showed slight increases thereafter until FY2020.

The percentage of females aged 65 or older with fasting blood glucose of $126 \mathrm{mg} / \mathrm{dL}$ or over was on a downward trend from FY2011 to FY2013, showed no substantial changes thereafter, but increased slightly in FY2020.

The percentages of those with HbA1c of 5.6\% or over increased among all age groups from FY2011 to FY2019. The relevant percentages decreased slightly in FY2020 but were higher compared with the levels in FY2011.

The percentage of those aged 65 or older who were diagnosed as having diabetes (HbA1c of $6.5 \%$ or over) was on an upward trend from FY2011 to FY2019, but decreased slightly in FY2020.

## 2. Explanation of the Graphs

Determinations of the existence of a high blood glucose (fasting blood glucose of $100 \mathrm{mg} / \mathrm{dL}$ or over and $\mathrm{HbA1}$ c of $5.6 \%$ or over) and diabetes (fasting blood glucose of $126 \mathrm{mg} / \mathrm{dL}$ or over and HbA 1 c of $6.5 \%$ or over) were based on the following reference intervals.

## 3. Reference Intervals

Classification and diagnostic criteria using fasting blood glucose and 75g 0GTT

|  | Time of measurement |  | Classification |  |
| :---: | :---: | :---: | :---: | :---: |
|  | At fasting | 2 hours <br> postprandial |  |  |
|  | $126 \mathrm{mg} /$ dL or over | OR | $200 \mathrm{mg} / \mathrm{dL}$ or over | Diabetes |
|  | Intermediate values, neither diabetic nor normal |  | Borderline |  |
|  | Less than 110 <br> $\mathrm{mg} / \mathrm{dL}$ | AND | Less than 140 <br> $\mathrm{mg} / \mathrm{dL}$ | Normal |

1) Fasting plasma glucose of $126 \mathrm{mg} / \mathrm{dL}$ or over in the early morning
2) Plasma glucose of $200 \mathrm{mg} / \mathrm{dL}$ or over at 2 hours after a 75 g OGTT
3) Casual plasma glucose of $200 \mathrm{mg} / \mathrm{dL}$ or over
4) HbA1c level of $6.5 \%$ or over
5) Fasting plasma glucose of lower than $110 \mathrm{mg} / \mathrm{dL}$ in the early morning
6) Plasma glucose of lower than $140 \mathrm{mg} / \mathrm{dL}$ at 2 hours after a 75 g OGTT

If any of the items 1) through 4) apply, the person will be diagnosed as having diabetes.
$\square$ If the blood glucose level is 5) or 6), the person will be diagnosed as normal.

OIndividuals who are not diagnosed as diabetic or normal will be classified as borderline.

## Criteria for conducting a detailed health check (additional check items based on a doctor's judgment)

| Blood glucose level | Fasting blood glucose of $100 \mathrm{mg} / \mathrm{dL}$ or over and HbA1c (NGSP level) of 5.6\% <br> or over or casual blood glucose of $100 \mathrm{mg} / \mathrm{dL}$ or over |
| :---: | :--- |

Source: "Guidelines for Smooth Implementation of Specified Health Checkups and Health Guidance (ver. 3.2) 2021" by the Ministry of Health, Labour and Welfare

## Renal Function (Serum Creatinine, eGFR)

## 1. Results

The percentage of males with serum creatinine of $1.15 \mathrm{mg} / \mathrm{dL}$ or over increased slightly among those aged 40 to 64 from FY2011 to FY2020, while the relevant percentage for males aged 65 or older continued to increase until FY2017, exceeded 10\%, and maintained that level until FY2020.

The percentage of females aged 65 or older with serum creatinine of $0.95 \mathrm{mg} / \mathrm{dL}$ or over exceeded $5 \%$ in FY2013, maintained that level until FY2018, and decreased to $4.9 \%$ in FY2020.

The percentage of males aged 40 to 64 with eGFR lower than $60 \mathrm{~mL} / \mathrm{min} / 1.73 \mathrm{~m}^{2}$ was on an upward trend from FY2011 to FY2019 but decreased slightly in FY2020. The relevant percentage for males aged 65 or older showed an upward trend from FY2011 to FY2020.

The percentage of females aged 40 or older with eGFR lower than $60 \mathrm{~mL} / \mathrm{min} / 1.73 \mathrm{~m}^{2}$ was on an upward trend from FY2011 to FY2017, showed a downward trend thereafter until FY2019, and increased slightly in FY2020.

## 2. Explanation of the Graphs

The graphs show the percentages of those with eGFR lower than $60 \mathrm{~mL} / \mathrm{min} / 1.73 \mathrm{~m}^{2}$, which is one of the diagnostic criteria for chronic kidney diseases.

## 3. Reference Intervals and Action Thresholds (Criteria used for Group and Individual Health Checks)

| Item | Diagnosis | Reference Interval | Action Threshold | Abnormality | Unit |
| :--- | :--- | :---: | :---: | :---: | :---: |
| Serum creatinine <br> (enzymatic method) | Males | $0.45-1.14$ | $1.15-1.34$ | 1.35 or over |  |
| eGFR (estimated glomerular <br> filtration rate) | 60.0 or over | $0.95-0.94$ | $45.0-59.9$ | 1.15 or over | $\mathrm{mg} / \mathrm{dL}$ |

## Renal Function: Uric Acid

## 1. Results

The percentage of males with uric acid of $7.1 \mathrm{mg} / \mathrm{dL}$ or over increased for all age groups from FY2011 to FY2018 but decreased slightly in FY2020. The percentage among females slightly increased in all age groups from FY2011 to FY2020.

The percentage of males with uric acid of $7.9 \mathrm{mg} / \mathrm{dL}$ or over increased among those aged 16 to 39 from FY2011 to FY2020.

The percentage of females with uric acid of $5.6 \mathrm{mg} / \mathrm{dL}$ or over increased from FY2011 to FY2020 in all age groups.

## 2. Explanation of the Graphs

Determination of hyperuricemia was based on the following reference intervals.

## 3. Reference Intervals

| Definition of hyperuricemia in the "Guidelines for Management <br> of Hyperuricemia and Gout" by the Japanese Society of Gout and <br> Uric \& Nucleic Acids | Uric acid of $7.1 \mathrm{mg} / \mathrm{dL}$ or higher |
| :--- | :--- |
| Levels that exceed the upper limit of the common reference <br> interval established by the Japanese Committee for Clinical <br> Laboratory Standards | Uric acid of $7.9 \mathrm{mg} / \mathrm{dL}$ or higher for <br> males and $5.6 \mathrm{mg} / \mathrm{dL}$ or higher for <br> females |

## FY2020 Comprehensive Health Check <br> Fukushima Health Management Survey Results of Tabulation by Health Check Item

## [Coverage]

- Residents registered at covered areas* from March 11, 2011 to April 1, 2012 (also after moving out from those covered areas)
- Residents registered at evacuation zones, etc. as of April 1 of the examination year
- Others, as warranted, based on Basic Survey results, even if the above conditions are not met
* Covered areas: Municipalities designated as the evacuation zone in 2011 Hirono Town, Naraha Town, Tomioka Town, Kawauchi Village, Okuma Town, Futaba Town, Namie Town, Katsurao Village, Iitate Village, Minamisoma City, Tamura City and Kawamata Town, and parts of Date City (containing specific spots recommended for evacuation)
[Examination Items]

| Age Group |  |
| :---: | :--- |
| $0-6$ years old <br> (Preschool children and <br> infants) | Height, weight <br> [The items below are performed upon request] <br> CBC (number of red blood cells, hematocrit, hemoglobin, platelet count, number of white <br> blood cells, differential white blood count) |
| 7-15 years old <br> from 1st to 9th grades) | Ceight, weight <br> CBC (number of red blood cells, hematocrit, hemoglobin, platelet count, number of white <br> blood cells, differential white blood count) <br> [The items below are performed upon request] <br> Blood biochemistry (AST, ALT, $\gamma$-GT, TG, HDL-C, LDL-C, HbA1c, plasma glucose, serum <br> creatinine, uric acid) |
| 16 years old and older | Height, weight, abdominal circumference (BMI), blood pressure, <br> CBC (number of red blood cells, hematocrit, hemoglobin, platelet count, number of white |
| blood cells, differential white blood count), |  |
| Urine test (urine sugar, urine protein, urine occult blood), <br> Blood biochemistry (AST, ALT, $\gamma$-GT, TG, HDL-C, LDL-C, HbA1c, plasma glucose, serum <br> creatinine, estimated glomerular filtration rate [eGFR], uric acid) |  |
| The underlined values are not routinely measured during regular health checks. |  |

* As general age categories and items for the Comprehensive Health Check do not correspond, we classified the participants into five age groups, namely, those aged 0 to 6 , those aged 7 to 15, those aged 16 to 39 , those aged 40 to 64, and those aged 65 or older, and tabulated the results by each
* For each health check item, tabulation was conducted by age group and by gender.
* Tabulation results include those who received health checks twice or more in the same fiscal year.
* Rules for describing tabulation results are the same as those used for the Vital Statistics in Japan by the Ministry of Health, Labour and Welfare.

When there is no data: -
When an item is not applicable to the relevant age group: •
When it is inappropriate to indicate data: ...
When the ratio is minor (lower than 0.05): $0.0 \%$

* The Data in this document are presented with the same items as those in the previous reports to make comparison possible. Therefore, the results may not correspond to the graphs shown in the Report on the Results of the FY2020 Comprehensive Health Check.

## Height

| Height (cm) (overall) |  |  |  |
| :---: | :---: | ---: | ---: |
| Age group | Number of <br> participants | Average age | Average value |
| 0 to 6 | 783 | 3.5 | 94.8 |
| 7 to 15 | 1,936 | 11.4 | 144.9 |
| 16 to 39 | 3,157 | 28.9 | 163.1 |
| 40 to 64 | 8,788 | 54.8 | 161.0 |
| 65 or older | 16,845 | 73.7 | 156.0 |

| Height (cm) (males) |  |  |  |  |  |
| :---: | :---: | ---: | ---: | :---: | :---: |
| Age group | Number of <br> participants | Average age | Average value | 150 cm or <br> shorter | 170 cm or <br> taller |
| 0 to 6 | 425 | 3.5 | 94.7 | $\ldots$ | $\ldots$ |
| 7 to 15 | 982 | 11.5 | 146.4 | $\ldots$ | $\ldots$ |
| 16 to 39 | 1,238 | 27.8 | 170.9 | $0.6 \%$ | $57.0 \%$ |
| 40 to 64 | 3,158 | 55.0 | 169.3 | $0.2 \%$ | $46.1 \%$ |
| 65 or older | 7,852 | 73.8 | 163.0 | $2.1 \%$ | $12.8 \%$ |

| Height (cm) (females) |  |  |  |  |  |  |
| :---: | :---: | ---: | ---: | :---: | :---: | :---: |
| Age group | Number of <br> participants | Average age | Average value | 140 cm or <br> shorter | 160 cm or <br> taller |  |
| 0 to 6 | 358 | 3.5 | 95.0 | $\ldots$ | $\ldots$ |  |
| 7 to 15 | 954 | 11.4 | 143.3 | $\ldots$ | $\ldots$ |  |
| 16 to 39 | 1,919 | 29.6 | 158.0 | $0.2 \%$ | $36.7 \%$ |  |
| 40 to 64 | 5,630 | 54.6 | 156.4 | $0.2 \%$ | $26.1 \%$ |  |
| 65 or older | 8,993 | 73.6 | 150.0 | $5.3 \%$ | $4.5 \%$ |  |

## Weight

| Weight (kg) (overall) |  |  |  |
| :---: | :---: | ---: | ---: |
| Age group | Number of <br> participants | Average age | Average value |
| 0 to 6 | 783 | 3.5 | 14.9 |
| 7 to 15 | 1,936 | 11.4 | 40.3 |
| 16 to 39 | 3,156 | 28.9 | 61.1 |
| 40 to 64 | 8,791 | 54.8 | 62.6 |
| 65 or older | 16,852 | 73.7 | 58.5 |

| Weight (kg) (males) |  |  |  |  |  |
| :---: | :---: | ---: | ---: | ---: | :---: |
| Age group | Number of <br> participants | Average age | Average value | 50 kg or less | 70 kg or over |
| 0 to 6 | 425 | 3.5 | 14.9 | $\ldots$ | $\ldots$ |
| 7 to 15 | 982 | 11.5 | 41.8 | $\ldots$ | $\ldots$ |
| 16 to 39 | 1,238 | 27.8 | 69.1 | $5.5 \%$ | $42.3 \%$ |
| 40 to 64 | 3,160 | 55.0 | 71.6 | $1.4 \%$ | $51.6 \%$ |
| 65 or older | 7,856 | 73.8 | 64.4 | $5.7 \%$ | $26.0 \%$ |

| Weight (kg) (females) |  |  |  |  |  |
| :---: | :---: | ---: | ---: | ---: | :---: |
| Age group | Number of <br> participants | Average age | Average value | 45 kg or less | 65 kg or over |
| 0 to 6 | 358 | 3.5 | 14.9 | $\ldots$ | $\ldots$ |
| 7 to 15 | 954 | 11.4 | 38.8 | $\ldots$ | $\ldots$ |
| 16 to 39 | 1,918 | 29.6 | 55.9 | $12.5 \%$ | $15.7 \%$ |
| 40 to 64 | 5,631 | 54.6 | 57.5 | $8.6 \%$ | $20.6 \%$ |
| 65 or older | 8,996 | 73.6 | 53.4 | $16.2 \%$ | $10.2 \%$ |

## 1. Physical Exam (1) BMI

| BMI (Weight/Height ${ }^{2}$ ) (overall) |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Age group | Number of <br> participants | Average age | Average value | $18 \mathrm{~kg} / \mathrm{m}^{2}$ or <br> lower | $25 \mathrm{~kg} / \mathrm{m}^{2}$ or <br> over |
| 0 to 6 | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ |
| 7 to 15 | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ |
| 16 to 39 | 3,156 | 28.9 | 22.9 | $8.2 \%$ | $24.0 \%$ |
| 40 to 64 | 8,788 | 54.8 | 24.0 | $3.8 \%$ | $36.0 \%$ |
| 65 or older | 16,845 | 73.7 | 24.0 | $3.0 \%$ | $35.2 \%$ |

| BMI (Weight/Height ${ }^{2}$ ) (males) |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Age group | Number of <br> participants | Average age | Average value | $18 \mathrm{~kg} / \mathrm{m}^{2}$ or <br> lower | $25 \mathrm{~kg} / \mathrm{m}^{2}$ or <br> over |  |
| 0 to 6 | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ |  |
| 7 to 15 | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ |  |
| 16 to 39 | 1,238 | 27.8 | 23.6 | $7.0 \%$ | $32.3 \%$ |  |
| 40 to 64 | 3,158 | 55.0 | 25.0 | $1.5 \%$ | $44.9 \%$ |  |
| 65 or older | 7,852 | 73.8 | 24.2 | $1.7 \%$ | $38.1 \%$ |  |

| BMI (Weight/Height ${ }^{2}$ )(females) |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Age group | Number of <br> participants | Average age | Average value | $18 \mathrm{~kg} / \mathrm{m}^{2}$ or <br> lower | $25 \mathrm{~kg} / \mathrm{m}^{2}$ or <br> over |  |
| 0 to 6 | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ |  |
| 7 to 15 | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ |  |
| 16 to 39 | 1,918 | 29.6 | 22.4 | $9.0 \%$ | $18.7 \%$ |  |
| 40 to 64 | 5,630 | 54.6 | 23.5 | $5.1 \%$ | $31.0 \%$ |  |
| 65 or older | 8,993 | 73.6 | 23.7 | $4.0 \%$ | $32.6 \%$ |  |

## 1. Physical Exam (2) Abdominal Circumference

| Abdominal circumference (cm) (overall) |  |  |  |
| :---: | :---: | :---: | :---: |
| Age group | Number of <br> participants | Average age | Average value |

| 65 or older | 8,995 | 73.6 | 5.7 | $0.8 \%$ | $8.8 \%$ | $1.5 \%$ | $0.5 \%$ |

## 3. Peripheral Blood Test (3)-2 Neutrophil count

| Neutrophil count (count/ $\mu \mathrm{L}$ ) (overall) |  |  |  |
| :---: | :---: | ---: | ---: |
| Age group | Number of <br> participants | Average age | Average value |
| 0 to 6 | 710 | 3.6 | 3,186 |
| 7 to 15 | 1,930 | 11.4 | 3,181 |
| 16 to 39 | 3,153 | 28.9 | 3,411 |
| 40 to 64 | 8,788 | 54.8 | 3,247 |
| 65 or older | 16,849 | 73.7 | 3,328 |

| Neutrophil count (count/ $\mu \mathrm{L}$ ) (males) |  |  |  |
| :---: | :---: | ---: | ---: |
| Age group | Number of <br> participants | Average age | Average value |
| 0 to 6 | 388 | 3.5 | 3,171 |
| 7 to 15 | 979 | 11.5 | 3,135 |
| 16 to 39 | 1,236 | 27.8 | 3,308 |
| 40 to 64 | 3,158 | 55.0 | 3,441 |
| 65 or older | 7,855 | 73.8 | 3,467 |

| Neutrophil count (count/ $\mu \mathrm{L}$ ) (females) |  |  |  |
| :---: | ---: | ---: | ---: |
| Age group | Number of <br> participants | Average age | Average value |
| 0 to 6 | 322 | 3.6 | 3,203 |
| 7 to 15 | 951 | 11.4 | 3,228 |
| 16 to 39 | 1,917 | 29.7 | 3,478 |
| 40 to 64 | 5,630 | 54.6 | 3,138 |
| 65 or older | 8,994 | 73.6 | 3,208 |

## 3. Peripheral Blood Test (3)-3 Lymphocyte Count

| Lymphocyte count (count/ $\mu \mathrm{L}$ ) (overall) |  |  |  |
| :---: | :---: | ---: | ---: |
| Age group | Number of <br> participants | Average age | Average value |
| 0 to 6 | 710 | 3.6 | 4,459 |
| 7 to 15 | 1,930 | 11.4 | 2,593 |
| 16 to 39 | 3,153 | 28.9 | 1,991 |
| 40 to 64 | 8,788 | 54.8 | 1,968 |
| 65 or older | 16,849 | 73.7 | 1,971 |

| Lymphocyte count (count/ $\mu \mathrm{L}$ ) (males) |  |  |  |
| :---: | :---: | ---: | ---: |
| Age group | Number of <br> participants | Average age | Average value |
| 0 to 6 | 388 | 3.5 | 4,480 |
| 7 to 15 | 979 | 11.5 | 2,604 |
| 16 to 39 | 1,236 | 27.8 | 2,054 |
| 40 to 64 | 3,158 | 55.0 | 2,043 |
| 65 or older | 7,855 | 73.8 | 1,943 |

| Lymphocyte count (count/ $\mu \mathrm{L}$ ) (females) |  |  |  |
| :---: | ---: | ---: | ---: |
| Age group | Number of <br> participants | Average age | Average value |
| 0 to 6 | 322 | 3.6 | 4,435 |
| 7 to 15 | 951 | 11.4 | 2,582 |
| 16 to 39 | 1,917 | 29.7 | 1,950 |
| 40 to 64 | 5,630 | 54.6 | 1,926 |
| 65 or older | 8,994 | 73.6 | 1,996 |

## 3. Peripheral Blood Test (3)-4 Monocyte Count

| Monocyte count (count/ $\mu \mathrm{L}$ ) (overall) |  |  |  |
| :---: | :---: | ---: | ---: |
| Age group | Number of <br> participants | Average age | Average value |
| 0 to 6 | 710 | 3.6 | 423 |
| 7 to 15 | 1,930 | 11.4 | 345 |
| 16 to 39 | 3,153 | 28.9 | 321 |
| 40 to 64 | 8,788 | 54.8 | 315 |
| 65 or older | 16,849 | 73.7 | 340 |

| Monocyte count (count $/ \mu \mathrm{L}$ ) (males) |  |  |  |
| :---: | :---: | ---: | ---: |
| Age group | Number of <br> participants | Average age | Average value |
| 0 to 6 | 388 | 3.5 | 433 |
| 7 to 15 | 979 | 11.5 | 357 |
| 16 to 39 | 1,236 | 27.8 | 339 |
| 40 to 64 | 3,158 | 55.0 | 356 |
| 65 or older | 7,855 | 73.8 | 373 |

| Monocyte count (count/ $\mu \mathrm{L}$ ) (females) |  |  |  |
| :---: | :---: | ---: | ---: |
| Age group | Number of <br> participants | Average age | Average value |
| 0 to 6 | 322 | 3.6 | 412 |
| 7 to 15 | 951 | 11.4 | 332 |
| 16 to 39 | 1,917 | 29.7 | 309 |
| 40 to 64 | 5,630 | 54.6 | 292 |
| 65 or older | 8,994 | 73.6 | 311 |

## 3. Peripheral Blood Test (3)-5 Eosinophil Count

| Eosinophil count (count/ $\mu \mathrm{L}$ ) (overall) |  |  |  |
| :---: | :---: | ---: | ---: |
| Age group | Number of <br> participants | Average age | Average value |
| 0 to 6 | 710 | 3.6 | 323 |
| 7 to 15 | 1,930 | 11.4 | 260 |
| 16 to 39 | 3,153 | 28.9 | 167 |
| 40 to 64 | 8,788 | 54.8 | 159 |
| 65 or older | 16,849 | 73.7 | 155 |

| Eosinophil count (count/ LL ) (males) |  |  |  |
| :---: | :---: | ---: | ---: |
| Age group | Number of <br> participants | Average age | Average value |
| 0 to 6 | 388 | 3.5 | 355 |
| 7 to 15 | 979 | 11.5 | 296 |
| 16 to 39 | 1,236 | 27.8 | 194 |
| 40 to 64 | 3,158 | 55.0 | 187 |
| 65 or older | 7,855 | 73.8 | 179 |

| Eosinophil count (count/ $\mu \mathrm{L}$ ) (females) |  |  |  |
| :---: | ---: | ---: | ---: |
| Age group | Number of <br> participants | Average age | Average value |
| 0 to 6 | 322 | 3.6 | 285 |
| 7 to 15 | 951 | 11.4 | 223 |
| 16 to 39 | 1,917 | 29.7 | 150 |
| 40 to 64 | 5,630 | 54.6 | 144 |
| 65 or older | 8,994 | 73.6 | 135 |

## 3. Peripheral Blood Test (3)-6 Basophil Count

| Basophil count (count/ $\mu \mathrm{L}$ ) (overall) |  |  |  |
| :---: | :---: | ---: | ---: |
| Age group | Number of <br> participants | Average age | Average value |
| 0 to 6 | 710 | 3.6 | 44 |
| 7 to 15 | 1,930 | 11.4 | 38 |
| 16 to 39 | 3,153 | 28.9 | 39 |
| 40 to 64 | 8,788 | 54.8 | 40 |
| 65 or older | 16,849 | 73.7 | 38 |

| Basophil count (count/ $\mu \mathrm{L}$ ) (males) |  |  |  |
| :---: | :---: | ---: | ---: |
| Age group | Number of <br> participants | Average age | Average value |
| 0 to 6 | 388 | 3.5 | 46 |
| 7 to 15 | 979 | 11.5 | 41 |
| 16 to 39 | 1,236 | 27.8 | 41 |
| 40 to 64 | 3,158 | 55.0 | 44 |
| 65 or older | 7,855 | 73.8 | 39 |

| Basophil count (count/ $\mu \mathrm{L}$ ) (males) |  |  |  |
| :---: | ---: | ---: | ---: |
| Age group | Number of <br> participants | Average age | Average value |
| 0 to 6 | 322 | 3.6 | 41 |
| 7 to 15 | 951 | 11.4 | 35 |
| 16 to 39 | 1,917 | 29.7 | 38 |
| 40 to 64 | 5,630 | 54.6 | 38 |
| 65 or older | 8,994 | 73.6 | 36 |

## 4. Blood Biochemistry (1)-1 Liver Function (AST)

| AST (U/L) (overall) |  |  |  |  |  |  |
| :---: | :---: | ---: | ---: | ---: | ---: | :---: |
| Age group | Number of <br> participants | Average age | Average value | $31 \mathrm{U} / \mathrm{L}$ or over | $51 \mathrm{U} / \mathrm{L}$ or over |  |
| 0 to 6 | $\cdot$ | $\cdot$ | $\cdot$ |  |  |  |
| 7 to 15 | 1,894 | 11.4 | 23.2 | $9.3 \%$ | $0.6 \%$ |  |
| 16 to 39 | 3,155 | 28.9 | 21.4 | $9.4 \%$ | $2.4 \%$ |  |
| 40 to 64 | 8,788 | 54.8 | 24.5 | $15.0 \%$ | $3.0 \%$ |  |
| 65 or older | 16,850 | 73.7 | 26.0 | $17.6 \%$ | $2.7 \%$ |  |

| AST (U/L) (males) |  |  |  |  |  |
| :---: | :---: | ---: | ---: | ---: | ---: |
| Age group | Number of <br> participants | Average age | Average value | 31 U/L or over | 51 U/L or over |
| 0 to 6 | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ |
| 7 to 15 | 952 | 11.5 | 24.8 | $12.8 \%$ | $1.1 \%$ |
| 16 to 39 | 1,237 | 27.8 | 25.3 | $17.2 \%$ | $4.4 \%$ |
| 40 to 64 | 3,158 | 55.0 | 27.3 | $23.3 \%$ | $4.7 \%$ |
| 65 or older | 7,855 | 73.8 | 27.1 | $21.7 \%$ | $3.5 \%$ |

| AST (U/L) (females) |  |  |  |  |  |  |
| :---: | :---: | ---: | ---: | ---: | ---: | :---: |
| Age group | Number of <br> participants | Average age | Average value | 31 U/L or over | 51 U/L or over |  |
| 0 to 6 | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ |  |
| 7 to 15 | 942 | 11.4 | 21.6 | $5.7 \%$ | $0.2 \%$ |  |
| 16 to 39 | 1,918 | 29.6 | 18.9 | $4.4 \%$ | $1.0 \%$ |  |
| 40 to 64 | 5,630 | 54.6 | 23.0 | $10.4 \%$ | $2.1 \%$ |  |
| 65 or older | 8,995 | 73.6 | 25.0 | $13.9 \%$ | $2.0 \%$ |  |

## 4. Blood Biochemistry (1)-2 Liver Function (ALT)

| ALT (U/L) (overall) |  |  |  |  |  |
| :---: | :---: | ---: | ---: | ---: | ---: |
| Age group | Number of <br> participants | Average age | Average value | $31 \mathrm{U} / \mathrm{L}$ or over | $51 \mathrm{U} / \mathrm{L}$ or over |
| 0 to 6 | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ |
| 7 to 15 | 1,894 | 11.4 | 16.1 | $5.4 \%$ | $1.8 \%$ |
| 16 to 39 | 3,155 | 28.9 | 23.9 | $19.2 \%$ | $8.4 \%$ |
| 40 to 64 | 8,788 | 54.8 | 25.3 | $22.0 \%$ | $7.4 \%$ |
| 65 or older | 16,850 | 73.7 | 22.1 | $14.5 \%$ | $3.6 \%$ |

| ALT (U/L) (males) |  |  |  |  |  |
| :---: | :---: | ---: | ---: | ---: | ---: |
| Age group | Number of <br> participants | Average age | Average value | 31 U/L or over | 51 U/L or over |
| 0 to 6 | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ |
| 7 to 15 | 952 | 11.5 | 18.8 | $8.6 \%$ | $2.9 \%$ |
| 16 to 39 | 1,237 | 27.8 | 35.0 | $37.6 \%$ | $16.9 \%$ |
| 40 to 64 | 3,158 | 55.0 | 32.0 | $36.0 \%$ | $13.0 \%$ |
| 65 or older | 7,855 | 73.8 | 24.1 | $19.1 \%$ | $4.7 \%$ |

| ALT (U/L) (females) |  |  |  |  |  |
| :---: | :---: | ---: | ---: | ---: | ---: |
| Age group | Number of <br> participants | Average age | Average value | 31 U/L or over | 51 U/L or over |
| 0 to 6 | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ |
| 7 to 15 | 942 | 11.4 | 13.3 | $2.1 \%$ | $0.7 \%$ |
| 16 to 39 | 1,918 | 29.6 | 16.7 | $7.4 \%$ | $3.0 \%$ |

| 65 or older | 8,995 | 73.6 | 118.6 | $46.0 \%$ | $22.6 \%$ |

## 4. Blood Biochemistry (2)-2 Lipids (Triglyceride)

| Triglyceride (TG) (mg/dL) (overall) |  |  |  |  |  |  |  |  |
| :---: | :---: | ---: | ---: | ---: | ---: | :---: | :---: | :---: |
| Age group | Number of <br> participants | Average age | Average value | $150 \mathrm{mg} / \mathrm{dL}$ or <br> over | $300 \mathrm{mg} / \mathrm{dL}$ or <br> over |  |  |  |
| 0 to 6 | $\cdot$ | $\cdot$ |  |  |  |  |  | $\cdot$ |
| 7 to 15 | 1,894 | 11.4 | 79.1 | $7.9 \%$ | $0.7 \%$ |  |  |  |
| 16 to 39 | 3,155 | 28.9 | 88.6 | $11.1 \%$ | $1.6 \%$ |  |  |  |
| 40 to 64 | 8,788 | 54.8 | 117.0 | $21.3 \%$ | $3.2 \%$ |  |  |  |
| 65 or older | 16,850 | 73.7 | 115.2 | $20.2 \%$ | $2.0 \%$ |  |  |  |

| Triglyceride (TG) (mg/dL) (males) |  |  |  |  |  |
| :---: | :---: | ---: | ---: | ---: | ---: |
| Age group | Number of <br> participants | Average age | Average value | $150 \mathrm{mg} / \mathrm{dL}$ or <br> over | $300 \mathrm{mg} / \mathrm{dL}$ or <br> over |
| 0 to 6 | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ |
| 7 to 15 | 952 | 11.5 | 79.1 | $8.6 \%$ | $0.9 \%$ |
| 16 to 39 | 1,237 | 27.8 | 110.2 | $17.8 \%$ | $3.6 \%$ |
| 40 to 64 | 3,158 | 55.0 | 145.6 | $32.1 \%$ | $6.3 \%$ |
| 65 or older | 7,855 | 73.8 | 120.6 | $23.5 \%$ | $2.7 \%$ |

| Triglyceride (TG) (mg/dL) (females) |  |  |  |  |  |
| :---: | :---: | ---: | ---: | ---: | ---: |
| Age group | Number of <br> participants | Average age | Average value | $150 \mathrm{mg} / \mathrm{dL}$ or <br> over | $300 \mathrm{mg} / \mathrm{dL}$ or <br> over |
| 0 to 6 | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ |
| 7 to 15 | 942 | 11.4 | 79.2 | $7.2 \%$ | $0.4 \%$ |
| 16 to 39 | 1,918 | 29.6 | 74.7 | $6.8 \%$ | $0.4 \%$ |
| 40 to 64 | 5,630 | 54.6 | 101.0 | $15.2 \%$ | $1.5 \%$ |
| 65 or older | 8,995 | 73.6 | 110.4 | $17.4 \%$ | $1.3 \%$ |

4. Blood Biochemistry (2)-3 Lipids (HDL Cholesterol)

| HDL-C (mg/dL) (overall) |  |  |  |  |
| :---: | :---: | ---: | ---: | ---: |
| Age group | Number of <br> participants | Average age | Average value | Lower than 40 <br> $\mathrm{mg} / \mathrm{dL}$ |
| 0 to 6 | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ |
| 7 to 15 | 1,894 | 11.4 | 61.5 | $2.4 \%$ |
| 16 to 39 | 3,155 | 28.9 | 62.4 | $3.7 \%$ |
| 40 to 64 | 8,788 | 54.8 | 64.1 | $4.3 \%$ |
| 65 or older | 16,850 | 73.7 | 60.6 | $5.8 \%$ |

| HDL-C (mg/dL) (males) |  |  |  |  |
| :---: | :---: | ---: | ---: | :---: |
| Age group | Number of <br> participants | Average age | Average value | Lower than 40 <br> $\mathrm{mg} / \mathrm{dL}$ |
| 0 to 6 | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ |
| 7 to 15 | 952 | 11.5 | 61.3 | $3.2 \%$ |
| 16 to 39 | 1,237 | 27.8 | 55.9 | $6.6 \%$ |
| 40 to 64 | 3,158 | 55.0 | 57.0 | $9.0 \%$ |
| 65 or older | 7,855 | 73.8 | 56.5 | $9.4 \%$ |

| HDL-C (mg/dL) (females) |  |  |  |  |
| :---: | :---: | ---: | ---: | :---: |
| Age group | Number of <br> participants | Average age | Average value | Lower than 40 <br> $\mathrm{mg} / \mathrm{dL}$ |
| 0 to 6 | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ |
| 7 to 15 | 942 | 11.4 | 61.8 | $1.7 \%$ |
| 16 to 39 | 1,918 | 29.6 | 66.7 | $1.8 \%$ |
| 40 to 64 | 5,630 | 54.6 | 68.1 | $1.7 \%$ |
| 65 or older | 8,995 | 73.6 | 64.2 | $2.6 \%$ |

4. Blood Biochemistry (3)-1 Blood Glucose (Fasting Blood Glucose)

| Fasting blood glucose (mg/dL) (overall) |  |  |  |  |  |  |  |
| :---: | :---: | ---: | ---: | ---: | ---: | ---: | :---: |
| Age group | Number of <br> participants | Average age | Average value | $110 \mathrm{mg} / \mathrm{dL}$ or <br> over | $130 \mathrm{mg} / \mathrm{dL}$ or <br> over | $160 \mathrm{mg} / \mathrm{dL}$ or <br> over |  |
| 0 to 6 | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | - |  |
| 7 to 15 | 1,203 | 11.7 | 87.0 | $0.3 \%$ | - | - |  |
| 16 to 39 | 2,746 | 28.9 | 89.1 | $2.4 \%$ | $0.8 \%$ | $0.3 \%$ |  |
| 40 to 64 | 7,522 | 54.6 | 99.5 | $15.5 \%$ | $5.0 \%$ | $1.6 \%$ |  |
| 65 or older | 12,926 | 73.3 | 105.7 | $28.1 \%$ | $9.5 \%$ | $2.4 \%$ |  |

| Fasting blood glucose (mg/dL) (males) |  |  |  |  |  |  |  |
| :---: | :---: | ---: | ---: | ---: | ---: | ---: | :---: |
| Age group | Number of <br> participants | Average age | Average value | $110 \mathrm{mg} / \mathrm{dL}$ or <br> over | $130 \mathrm{mg} / \mathrm{dL}$ or <br> over | $160 \mathrm{mg} / \mathrm{dL}$ or <br> over |  |
| 0 to 6 | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | - |  |
| 7 to 15 | 593 | 11.8 | 87.7 | $0.3 \%$ | - | - |  |
| 16 to 39 | 1,051 | 27.8 | 91.0 | $3.0 \%$ | $1.0 \%$ | $0.4 \%$ |  |
| 40 to 64 | 2,690 | 54.9 | 104.0 | $23.2 \%$ | $7.7 \%$ | $2.6 \%$ |  |
| 65 or older | 6,067 | 73.4 | 108.4 | $34.0 \%$ | $12.4 \%$ | $3.1 \%$ |  |

| Fasting blood glucose (mg/dL) (females) |  |  |  |  |  |  |  |
| :---: | :---: | ---: | ---: | ---: | ---: | ---: | :---: |
| Age group | Number of <br> participants | Average age | Average value | $110 \mathrm{mg} / \mathrm{dL}$ or <br> over | $130 \mathrm{mg} / \mathrm{dL}$ or <br> over | $160 \mathrm{mg} / \mathrm{dL}$ or <br> over |  |
| 0 to 6 | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ |  |
| 7 to 15 | 610 | 11.6 | 86.4 | $0.3 \%$ | - | - |  |
| 16 to 39 | 1,695 | 29.5 | 88.0 | $2.1 \%$ | $0.6 \%$ | $0.3 \%$ |  |
| 40 to 64 | 4,832 | 54.4 | 96.9 | $11.3 \%$ | $3.5 \%$ | $1.0 \%$ |  |
| 65 or older | 6,859 | 73.2 | 103.2 | $22.8 \%$ | $7.0 \%$ | $1.7 \%$ |  |

4. Blood Biochemistry (3)-2 Blood Glucose (HbA1c)

| HbA1c (\%) (NGSP) (overall) |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Age group | Number of participants | Average age | Average value | 6.0\% or over | 7.0\% or over | 8.0\% or over |
| 0 to 6 | - | - | - | - | - | - |
| 7 to 15 | 1,892 | 11.4 | 5.3 | 0.2\% | - | - |
| 16 to 39 | 3,154 | 28.9 | 5.3 | 2.4\% | 0.8\% | 0.5\% |
| 40 to 64 | 8,788 | 54.8 | 5.6 | 16.3\% | 3.8\% | 1.3\% |
| 65 or older | 16,851 | 73.7 | 5.8 | 29.2\% | 5.4\% | 1.3\% |

| HbA1c (\%) (NGSP) (males) |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Age group | Number of participants | Average age | Average value | 6.0\% or over | 7.0\% or over | 8.0\% or over |
| 0 to 6 | - | - | - | - | - | - |
| 7 to 15 | 950 | 11.5 | 5.3 | 0.3\% | - | - |
| 16 to 39 | 1,237 | 27.8 | 5.3 | 3.0\% | 0.8\% | 0.6\% |
| 40 to 64 | 3,158 | 55.0 | 5.7 | 19.9\% | 5.9\% | 2.1\% |
| 65 or older | 7,855 | 73.8 | 5.9 | 31.5\% | 6.6\% | 1.5\% |

| HbA1c (\%) (NGSP) (females) |  |  |  |  |  |  |  |
| :---: | :---: | ---: | ---: | ---: | ---: | ---: | :---: |
| Age group | Number of <br> participants | Average age | Average value | $6.0 \%$ or over | $7.0 \%$ or over | $8.0 \%$ or over |  |
| 0 to 6 | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ |  | $\cdot$ |  |
| 7 to 15 | 942 | 11.4 | 5.3 | $0.1 \%$ | - | - |  |
| 16 to 39 | 1,917 | 29.7 | 5.3 | $2.1 \%$ | $0.7 \%$ | $0.4 \%$ |  |
| 40 to 64 | 5,630 | 54.6 | 5.6 | $14.3 \%$ | $2.7 \%$ | $0.9 \%$ |  |
| 65 or older | 8,996 | 73.6 | 5.8 | $27.3 \%$ | $4.2 \%$ | $1.0 \%$ |  |

## 4. Blood Biochemistry (4)-1 Renal Function (Serum Creatinine)

| Serum creatinine (mg/dL) (overall) |  |  |  |
| :---: | :---: | ---: | ---: |
| Age group | Number of <br> participants | Average age | Average value |
| 0 to 6 | $\cdot$ | $\cdot$ | $\cdot$ |
| 7 to 15 | 1,894 | 11.4 | 0.51 |
| 16 to 39 | 3,155 | 28.9 | 0.71 |
| 40 to 64 | 8,788 | 54.8 | 0.74 |
| 65 or older | 16,850 | 73.7 | 0.80 |

| Serum creatinine (mg/dL) (males) |  |  |  |  |  |
| :---: | :---: | ---: | ---: | ---: | :---: |
| Age group | Number of <br> participants | Average age | Average value | $1.15 \mathrm{mg} / \mathrm{dL}$ or <br> over | $1.35 \mathrm{mg} / \mathrm{dL}$ or <br> over |
| 0 to 6 | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ |
| 7 to 15 | 952 | 11.5 | 0.53 | - | - |
| 16 to 39 | 1,237 | 27.8 | 0.84 | $1.1 \%$ | $0.1 \%$ |
| 40 to 64 | 3,158 | 55.0 | 0.89 | $3.8 \%$ | $1.0 \%$ |
| 65 or older | 7,855 | 73.8 | 0.93 | $10.5 \%$ | $3.8 \%$ |

| Serum creatinine (mg/dL) (females) |  |  |  |  |  |
| :---: | :---: | ---: | ---: | :---: | :---: |
| Age group | Number of <br> participants | Average age | Average value | $0.95 \mathrm{mg} / \mathrm{dL}$ or <br> over | $1.15 \mathrm{mg} / \mathrm{dL}$ or <br> over |
| 0 to 6 | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ |
| 7 to 15 | 942 | 11.4 | 0.49 | - | - |
| 16 to 39 | 1,918 | 29.6 | 0.62 | $0.2 \%$ | - |
| 40 to 64 | 5,630 | 54.6 | 0.65 | $1.1 \%$ | $0.3 \%$ |
| 65 or older | 8,995 | 73.6 | 0.70 | $4.9 \%$ | $1.6 \%$ |

## 4. Blood Biochemistry (4)-2 Renal Function (eGFR)

| eGFR (mL/min/1.73m²) (overall) |  |  |  |
| :---: | :---: | :---: | :---: |
| Age group | Number of <br> participants | Average age | Average value |
| 0 to 6 | $\cdot$ | $\cdot$ | $\cdot$ |
| 7 to 15 | $\cdot$ | $\cdot$ | $\cdot$ |
| 16 to 39 | 3,155 | 28.9 | 93.9 |
| 40 to 64 | 8,788 | 54.8 | 74.6 |
| 65 or older | 16,850 | 73.7 | 65.3 |

| $\mathrm{eGFR}\left(\mathrm{mL} / \mathrm{min} / 1.73 \mathrm{~m}^{2}\right.$ ) (males) |  |  |  |
| :---: | :---: | :---: | :---: |
| Age group | Number of <br> participants | Average age | Average value |
| 0 to 6 | $\cdot$ | $\cdot$ | $\cdot$ |
| 7 to 15 | $\cdot$ | $\cdot$ | $\cdot$ |
| 16 to 39 | 1,237 | 27.8 | 93.0 |
| 40 to 64 | 3,158 | 55.0 | 74.0 |
| 65 or older | 7,855 | 73.8 | 65.1 |

| $\mathrm{eGFR}\left(\mathrm{mL} / \mathrm{min} / 1.73 \mathrm{~m}^{2}\right.$ ) (females) |  |  |  |
| :---: | :---: | :---: | :---: |
| Age group | Number of <br> participants | Average age | Average value |
| 0 to 6 | $\cdot$ | $\cdot$ | $\cdot$ |
| 7 to 15 | $\cdot$ | $\cdot$ | $\cdot$ |
| 16 to 39 | 1,918 | 29.6 | 94.5 |
| 40 to 64 | 5,630 | 54.6 | 74.9 |
| 65 or older | 8,995 | 73.6 | 65.4 |

## 4. Blood Biochemistry (4)-3 Renal Function (Uric Acid)

| Uric acid (mg/dL) (overall) |  |  |  |  |  |  |
| :---: | :---: | :---: | ---: | ---: | :---: | :---: |
| Age group | Number of <br> participants | Average age | Average value | $7.1 \mathrm{mg} / \mathrm{dL}$ or <br> over | $8.0 \mathrm{mg} / \mathrm{dL}$ or <br> over |  |
| 0 to 6 | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ |  |
| 7 to 15 | 1,894 | 11.4 | 4.7 | $4.1 \%$ | $1.1 \%$ |  |
| 16 to 39 | 3,155 | 28.9 | 5.1 | $9.8 \%$ | $3.8 \%$ |  |
| 40 to 64 | 8,788 | 54.8 | 5.1 | $8.9 \%$ | $2.8 \%$ |  |
| 65 or older | 16,848 | 73.7 | 5.2 | $8.5 \%$ | $2.2 \%$ |  |

| Uric acid (mg/dL) (males) |  |  |  |  |  |  |  |
| :---: | :---: | ---: | ---: | ---: | ---: | ---: | :---: |
| Age group | Number of <br> participants | Average age | Average value | $7.1 \mathrm{mg} / \mathrm{dL}$ or <br> over | $7.9 \mathrm{mg} / \mathrm{dL}$ or <br> over | $8.0 \mathrm{mg} / \mathrm{dL}$ or <br> over |  |
| 0 to 6 | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ |  |
| 7 to 15 | 952 | 11.5 | 5.0 | $7.8 \%$ | $2.3 \%$ | $2.0 \%$ |  |
| 16 to 39 | 1,237 | 27.8 | 6.2 | $23.0 \%$ | $10.9 \%$ | $9.3 \%$ |  |
| 40 to 64 | 3,158 | 55.0 | 6.1 | $20.9 \%$ | $7.6 \%$ | $6.7 \%$ |  |
| 65 or older | 7,854 | 73.8 | 5.7 | $14.4 \%$ | $4.6 \%$ | $3.8 \%$ |  |

| Uric acid (mg/dL) (females) |  |  |  |  |  |  |  |
| :---: | :---: | ---: | ---: | ---: | ---: | ---: | :---: |
| Age group | Number of <br> participants | Average age | Average value | $5.6 \mathrm{mg} / \mathrm{dL}$ or <br> over | $7.1 \mathrm{mg} / \mathrm{dL}$ or <br> over | $8.0 \mathrm{mg} / \mathrm{dL}$ or <br> over |  |
| 0 to 6 | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ |  |
| 7 to 15 | 942 | 11.4 | 4.3 | $7.1 \%$ | $0.3 \%$ | $0.2 \%$ |  |
| 16 to 39 | 1,918 | 29.6 | 4.4 | $12.0 \%$ | $1.3 \%$ | $0.3 \%$ |  |
| 40 to 64 | 5,630 | 54.6 | 4.6 | $17.9 \%$ | $2.1 \%$ | $0.6 \%$ |  |

## Report on the Results of Pregnancy and Birth Survey for FY2020

## 1. Outline

### 1.1 Purpose

We address anxieties associated with pregnancy and childbirth and provide necessary support through assessing participants' physical and mental health. The survey also aims to improve perinatal care in Fukushima Prefecture by listening to people's needs and expectations.
1.2 Covered population

11,382 persons who meet either of the following conditions:
(i) Those who received Maternal and Child Health Handbooks from municipal offices in Fukushima Prefecture from August 1, 2019 to July 31, 2020
(ii) Those who had handbooks issued in other prefectures during the same period as in (i), but who returned to their hometown in Fukushima for child-birth

| [For reference] | Year <br> Surveyed | Survey population |
| :---: | :---: | :---: |
|  | FY2011 | 16,001 |
|  | FY2012 | 14,516 |
|  | FY2013 | 15,218 |
|  | FY2014 | 15,125 |
|  | FY2015 | 14,572 |
|  | FY2016 | 14,154 |
|  | FY2017 | 13,552 |
|  | FY2018 | 12,838 |
| FY2019 | 11,909 |  |
|  | FY2020 | 11,382 |

1.3 Survey methods
A. Survey sheet: Self-administered questionnaire
B. Dates of questionnaire distribution
[Group 1] *November 2, 2020, January 15, 2021, and March 12, 2021
[Group 2] Distributed on an as-needed basis with cooperation of the obstetric clinics/hospitals in Fukushima Prefecture
*For Group 1, questionnaires were sent at 3 separate intervals depending on expected delivery date, based on pregnancy registration information provided by all 59 municipalities in Fukushima Prefecture.

For FY2017 survey: When we requested the municipalities to provide pregnancy registration information, we asked them to exclude miscarriages, stillbirths, and cases in which the survival of a baby could not be confirmed; we report only the number of these cases.

For FY2016 survey: We excluded miscarriages, stillbirths, and cases in which the survival of the baby could not be confirmed from the mailing list if we had received this information from municipalities before sending.

For FY2015 and previous surveys: We sent the questionnaire to all pregnant women in the prefecture.
C. Response method: by post or online
*Online responses were accepted from November 2, 2020 to April 30, 2021.
1.4 Survey items

The major survey items are as follows:
A. Mental health of expectant mothers
B. Current living conditions (e.g., evacuation status, separation of family members)
C. Conditions of delivery and mothers' health conditions during pregnancy
D. Confidence in child rearing
E. Expectations for the next pregnancy
1.5 Data tabulation period

Responses received from November 2, 2020 to December 17, 2021

## 2. Summary of Survey Results

Survey results are as shown in 5.1, 5.2, and 5.3 of "5 Pregnancy and Birth Survey for FY2020."
Note that the number of valid responses by category may not match valid responses in total due to missing values in each category.
2.1 Response rates (See Table 1-1)

The total number of responses (response rate) for FY2020 was 6,359 (55.9\%), the number of valid responses was 6,330 , and the number of invalid responses was 29 . Of these, the number of online responses (response rate) was 2,076 (32.6\%).

| [For reference] | Year <br> surveyed | Number of <br> responses <br> (response rate) | By post | Online | Percentage <br> of online <br> responses |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | FY2011 | $9,316(58.2 \%)$ | 9,316 |  |  |
|  | FY2012 | $7,181(49.5 \%)$ | 7,181 |  |  |
| FY2013 | $7,260(47.7 \%)$ | 7,260 |  |  |  |
|  | FY2014 | $7,132(47.2 \%)$ | 7,132 |  |  |
|  | FY2015 | $7,031(48.3 \%)$ | 7,031 |  | 1,147 |
| FY2016 | $7,326(51.8 \%)$ | 6,179 | $15.7 \%$ |  |  |
| FY2017 | $6,449(47.6 \%)$ | 5,272 | 1,177 | $18.3 \%$ |  |
| FY2018 | $6,649(51.8 \%)$ | 5,429 | 1,220 | $18.3 \%$ |  |
|  | FY2019 | $6,328(53.1 \%)$ | 4,895 | 1,433 | $22.6 \%$ |
| FY2020 | $6,359(55.9 \%)$ | 4,283 | 2,076 | $32.6 \%$ |  |

2.2 Number of respondents by region (See Tables 1-1 and 1-2)
A. The number of respondents (response rate) by region of residence for the FY2020 Survey was as follows: 1,640 (58.9\%) in Kenpoku, 1,844 (54.4\%) in Kenchu, 484 (56.9\%) in Kennan, 367 ( $45.4 \%$ ) in Soso, 1,103 (55.0\%) in Iwaki, 764 (56.3\%) in Aizu, 64 ( $64.0 \%$ ) in Minamiaizu, and 93 in other prefectures.
B. Most respondents were in the 30-34 age group, followed by 25-29 and 35-39 age groups.

### 2.3 Survey results

A. Pregnancy outcomes (See Tables 9-2, 13-3, 14-8, and Tables 14-21 through 14-24)
(a) The proportions of miscarriages and induced abortions among the covered population that were not known at the time of receiving information from the municipalities or which were reported afterwards were $0.41 \%$ and $0.09 \%$, respectively. (Q9)
[For reference]

| Year <br> surveyed | Proportion of <br> miscarriages | Proportion of <br> induced <br> abortion | Note (Covered population) |
| :---: | :---: | :---: | :---: |
| FY2011 | $0.77 \%$ | $0.06 \%$ | We sent the questionnaire to all pregnant |
| women in the prefecture. |  |  |  |

* The FY2017 and subsequent surveys are not comparable with the FY2016 and prior surveys because the target groups are different.
(b) The proportion of preterm deliveries was 4.4\%. (Q13)
[For reference]

| Year <br> surveyed | Proportion of preterm <br> deliveries |
| :---: | :---: |
| FY2011 | $4.6 \%$ |
| FY2012 | $5.6 \%$ |
| FY2013 | $5.2 \%$ |
| FY2014 | $5.3 \%$ |
| FY2015 | $5.6 \%$ |
| FY2016 | $5.3 \%$ |
| FY2017 | $5.3 \%$ |
| FY2018 | $5.2 \%$ |
| FY2019 | $5.1 \%$ |
| FY2020 | $4.4 \%$ |

Percentages for FY2011-2018 differ from those reported in the Pregnancy and Birth Survey Report (2011-2018) due to a change of the total number of preterm deliveries after excluding stillbirths.

Reference: According to the 2020 Vital Statistics of the Ministry of Health, Labor and Welfare, the proportion of preterm deliveries among all childbirths in Japan was 5.5\%
(c) The proportion of low birth weight infants (less than $2,500 \mathrm{~g}$ ) was $8.1 \%$. (Q14)
[For reference]

| Years <br> surveyed | Proportion of low <br> birth weight infants |
| :---: | :---: |
| FY2011 | $8.6 \%$ |
| FY2012 | $9.2 \%$ |
| FY2013 | $9.6 \%$ |
| FY2014 | $9.8 \%$ |
| FY2015 | $9.4 \%$ |
| FY2016 | $9.2 \%$ |
| FY2017 | $9.2 \%$ |
| FY2018 | $9.0 \%$ |
| FY2019 | $9.1 \%$ |
| FY2020 | $8.1 \%$ |

Percentages for FY2011-2018 differ from those reported in the Pregnancy and Birth Survey Report (2011-2018) due to a change of the total number of preterm deliveries after excluding stillbirths.

Reference: According to the 2020 Vital Statistics of the Ministry of Health, Labour and Welfare, the proportion of low birth weight infants among all childbirths in Japan was 9.2\%.
(d) The incidence of congenital anomalies in singleton pregnancies was $2.21 \%$. The most frequent anomaly was cardiovascular malformation with an incidence of $0.61 \%$. (Q14)

| [For reference] | Year <br> surveyed | Incidence of congenital <br> anomalies in singleton <br> pregnancies | Incidence of <br> cardiovascular <br> malformation |
| :---: | :---: | :---: | :---: |
|  | FY2011 | $2.85 \%$ | $0.89 \%$ |
|  | FY2012 | $2.39 \%$ | $0.79 \%$ |
|  | FY2013 | $2.35 \%$ | $0.91 \%$ |
|  | FY2014 | $2.30 \%$ | $0.74 \%$ |
| FY2015 | $2.24 \%$ | $0.75 \%$ |  |
|  | FY2016 | $2.55 \%$ | $0.91 \%$ |
| FY2017 | $2.38 \%$ | $0.62 \%$ |  |
| FY2018 | $2.19 \%$ | $0.92 \%$ |  |
| FY2019 | $2.71 \%$ | $0.85 \%$ |  |
| FY2020 | $2.21 \%$ | $0.61 \%$ |  |

Reference: In general, it is reported that the incidence of congenital anomalies in singleton pregnancies is 3 to $5 \%$, and the natural incidence rate of cardiovascular malformation is about 1\%.
B. Mental health of mothers (See Tables 4-1 through 4-3)

The proportion of mothers with depressive symptoms was $18.0 \%$.
For information, according to the national maternal and child health plan in Japan (Sukoyaka Oyako 21), the proportions of mothers suspected of experiencing postnatal depression (based on the Edinburgh Postnatal Depression Scale) were 8.4\% in FY2013 and 9.8\% in FY2017.

The proportion with postnatal depression in the FY2020 survey (based on the Edinburgh Postnatal Depression Scale) is estimated to be 10.0\%. (Reference used for calculation: Mishina H, et al. Pediatr Int. 2009; 51: 48.)

| [For reference] | Year <br> surveyed |
| :---: | :---: |
| FY2011 | Proportion of those <br> with depressive <br> symptoms |
|  | FY2012 |
| FY2013 | $27.1 \%$ |
| FY2014 | $25.5 \%$ |
| FY2015 | $24.5 \%$ |
| FY2016 | $22.4 \%$ |
| FY2017 | $21.1 \%$ |
| FY2018 | $20.7 \%$ |
| FY2019 | $18.4 \%$ |
| FY2020 | $18.3 \%$ |

C. Perinatal care (See Table 3)
$3.9 \%$ of mothers answered "no" or "not at all" to a question if they received sufficient antenatal and delivery care. (Q3)

| [For reference] | Year <br> surveyed |
| :---: | :---: |
| Proportion of those <br> who answered "no" or <br> "not at all" |  |
| FY2011 | No applicable question |
| FY2012 | $3.5 \%$ |
| FY2013 | $2.3 \%$ |
| FY2014 | $2.7 \%$ |
| FY2015 | $2.4 \%$ |
| FY2016 | $2.1 \%$ |
| FY2017 | $1.7 \%$ |
| FY2018 | $1.7 \%$ |
| FY2019 | $1.4 \%$ |
| FY2020 | $3.9 \%$ |

D. Family life and child rearing (See Tables 5-1 and 15)

The proportion of those who are still living as evacuees (in temporary houses or other accommodations) is on the decrease and the current rate is $1.2 \%$ overall for Fukushima Prefecture. (Q5)

| [For reference] | Year <br> surveyed |
| :---: | :---: |
| Proportion of those <br> who are still living as <br> evacuees |  |
| FY2011 | No applicable question |
| FY2012 | $7.7 \%$ |
| FY2013 | $5.5 \%$ |
| FY2014 | $4.9 \%$ |
| FY2015 | $3.8 \%$ |
| FY2016 | $3.4 \%$ |
| FY2017 | $2.3 \%$ |
| FY2018 | $1.8 \%$ |
| FY2019 | $1.6 \%$ |
| FY2020 | $1.2 \%$ |

$17.5 \%$ answered that they sometimes lose confidence in child rearing. (Q15)

| [For reference] | Year <br> surveyed | Proportion of those <br> who sometimes feel <br> unconfident in child <br> rearing |
| :---: | :---: | :---: |
|  | FY2011 | No applicable question |
|  | FY2012 | $15.4 \%$ |
| FY2013 | $17.5 \%$ |  |
| FY2014 | $16.6 \%$ |  |
| FY2015 | $17.7 \%$ |  |
| FY2016 | $16.6 \%$ |  |
| FY2017 | $18.1 \%$ |  |
| FY2018 | $17.7 \%$ |  |
| FY2019 | $18.8 \%$ |  |
| FY2020 | $17.5 \%$ |  |

Reference: According to the 2013 Health and Welfare Science Research "Study on Final Evaluation/Problem Analysis of Healthy Parents and Children 21 and Promotion of Next National Health Movement" (Yamagata Zentaro Group), 19.3\% of mothers answered at the health checkup for 3-and 4-monthold children that they did not have confidence in child rearing.
E. Expectations for the next pregnancy (See Tables 17-1 through 17-3)

- The proportion of those who anticipate another pregnancy was $50.0 \%$.
- The following services were requested by those who anticipate another pregnancy: improvement of preschool, care for longer hours, or day care for sick children, $76.7 \%$; improvement of childbirth and parental leaves, 72.4\%.
- The reasons for not anticipating another pregnancy were as follows: no desire, 53.9\%; age- or healthrelated reasons, $36.5 \%$. The proportion of those who answered that they were not planning a pregnancy due to worries about radiation effects was $0.2 \%$.

| [For reference] | Year <br> surveyed | Proportion of those <br> anticipating another <br> pregnancy |
| :---: | :---: | :---: |
| FY2011 | Proportion of those <br> not anticipating <br> another pregnancy <br> due to worries about <br> radiation effects |  |
| FY2012 | $52.9 \%$ | No applicable question |
| No applicable question |  |  |
|  | FY2013 | $52.8 \%$ |
| FY2014 | $57.1 \%$ | $5.6 \%$ |
| FY2015 | $53.3 \%$ | $3.9 \%$ |
| FY2016 | $54.6 \%$ | $1.6 \%$ |
| FY2017 | $52.4 \%$ | $1.2 \%$ |
| FY2018 | $52.2 \%$ | $0.8 \%$ |
| FY2019 | $51.3 \%$ | $0.5 \%$ |
| FY2020 | $50.0 \%$ | $0.5 \%$ |

Reference: Percentages of couples married for less than 10 years who were planning a pregnancy was $60 \%$ in the $14^{\text {th }}$ National Fertility Survey in $2010(51 \%$ among those who already had a child) and $57 \%$ in the $15^{\text {th }}$ National Fertility Survey in 2015 ( $50 \%$ among those who already had a child).

## F. Free comments (See Table 18)

- 871 respondents (13.8\%) provided comments in the free comments section
- The most frequently discussed issues were about child rearing ( $24.8 \%$ ) followed by matters related to COVID-19 (24.7\%).
- The proportion of those who wrote comments on radiation effects on the fetus and child was $0.5 \%$.

| [For reference] | Year <br> surveyed | Number of those who <br> provided comments in <br> the free comments <br> section | Proportion of those <br> who wrote comments <br> on radiation effects on <br> fetus and child |
| :---: | :---: | :---: | :---: |
| FY2011 | $3,722(42.2 \%)$ | $29.6 \%$ |  |
| FY2012 | $1,481(20.7 \%)$ | $26.4 \%$ |  |
| FY2013 | $867(12.0 \%)$ | $12.9 \%$ |  |
| FY2014 | $745(10.5 \%)$ | $9.5 \%$ |  |
| FY2015 | $1,101(15.7 \%)$ | $5.2 \%$ |  |
| FY2016 | $965(13.3 \%)$ | $6.1 \%$ |  |
| FY2017 | $799(12.4 \%)$ | $4.8 \%$ |  |
| FY2018 | $881(13.4 \%)$ | $1.8 \%$ |  |
| FY2019 | $818(13.0 \%)$ | $2.1 \%$ |  |
| FY2020 | $871(13.8 \%)$ | $0.5 \%$ |  |

### 2.4 Summary

A. Pregnancy outcomes

The proportions of preterm deliveries and low birth weight infants decreased from the results up to FY2019. The incidence of congenital anomalies in singleton pregnancies also decreased, and was not notably higher than the generally reported incidence of $3-5 \%$.
B. Mental health of mothers

The proportion of those with depressive symptoms decreased over time. The proportion of those suspected of experiencing postnatal depression based on the Edinburgh Postnatal Depression Scale was $9.8 \%$ in the FY2017 Survey, and is expected to be $10.0 \%$ in the FY2020 Main Survey.
C. Perinatal care

The proportion of those who answered "no" or "not at all" to a question if they received sufficient care during pregnancy and delivery had shown a decreasing trend over time since FY2012, but increased in the FY2020 Survey.
D. Free comments

The most frequently discussed issues were about child rearing, followed by matters related to COVID19. Concern about radiation effects on the fetus and child came up most frequently in FY2011 and 2012, but has decreased since then.

## 3. Outline of Post-Survey Support

### 3.1 Purpose

To alleviate anxieties of those among all the FY2020 Pregnancy and Birth Survey respondents who were judged as requiring consultation and support by providing consultation and support via telephone or email by midwives and public health nurses.
3.2 Coverage for support (See Table 19)

Among respondents of FY2020 Pregnancy and Birth Survey who returned their response between November 2, 2020 and December 17, 2021, those judged as requiring support were covered with telephone consultation and support.
3.3 Criteria for Support (See Table 20)

Respondents who fall under one of the following:
A. Those who responded "yes" to two questions regarding depressive symptoms (Q4-1, Q4-2); and/or
B. Those who wrote comments that suggest the need for support (in the free comment section or other parts of the questionnaire.).
Ex.) Those who appeared to have a severely depressed mood
Those in need of support for child rearing

Those who are concerned about radiation dose Those who complain of poor physical condition Those who want direct, substantial response Those who requested support

### 3.4 Methods <br> Consultation and support via telephone and email

## 4. Summary of Support Results

The results of the support are as shown in " 5.4 Status of Support" under " 5 . Tabulated Results of Pregnancy and Birth Survey for FY2020" below.
4.1 Number of support candidates (See Tables 19 and 20)

- Of 6,359 respondents who returned their response from November 2, 2020 through December 17, 2021, 688 persons, or $10.8 \%$, were judged as in need of telephone consultation and support.
- Of these, $6.0 \%$ were judged to be in need of support based on the criteria for depressive symptoms and $4.8 \%$ were judged to be in need of support based on free comments. Since 2012, the content of free comments has also been used to judge support needs so that support can be extended to a larger number of people.
[For reference]

| Years <br> surveyed | Number of <br> respondents | Support based on <br> depressive <br> symptoms | Support based on <br> free comments | Support <br> candidates |
| :---: | :---: | :---: | :---: | :---: |
| FY2011 | 9,316 | $1,224(13.1 \%)$ | $177(1.9 \%)$ | $1,401(15.0 \%)$ |
| FY2012 | 7,181 | $751(10.5 \%)$ | $353(4.9 \%)$ | $1,104(15.4 \%)$ |
| FY2013 | 7,260 | $744(10.2 \%)$ | $357(4.9 \%)$ | $1,101(15.2 \%)$ |
| FY2014 | 7,132 | $645(9.0 \%)$ | $185(2.6 \%)$ | $830(11.6 \%)$ |
| FY2015 | 7,031 | $549(7.8 \%)$ | $364(5.2 \%)$ | $913(13.0 \%)$ |
| FY2016 | 7,326 | $573(7.8 \%)$ | $378(5.2 \%)$ | $951(13.0 \%)$ |
| FY2017 | 6,449 | $449(7.0 \%)$ | $350(5.4 \%)$ | $799(12.4 \%)$ |
| FY2018 | 6,649 | $424(6.4 \%)$ | $287(4.3 \%)$ | $711(10.7 \%)$ |
| FY2019 | 6,328 | $376(5.9 \%)$ | $292(4.6 \%)$ | $668(10.6 \%)$ |
| FY2020 | 6,359 | $380(6.0 \%)$ | $308(4.8 \%)$ | $688(10.8 \%)$ |

Cases falling under both criteria (depressive symptoms and free comments) were counted as depressive symptoms.
4.2 Contents of consultation (See Table 21)

- The most frequently discussed issue was child rearing (life) (54.5\%), followed by physical and mental health of mothers (52.0\%) and family life (11.2\%). (Issues relating to "child rearing" include breastfeeding volume, baby food, growth/development, how to relate to children, etc.)
- The proportion of consultation related to radiation effects and anxiety was $0.6 \%$.
[For reference]

| Yearsurveyed | Content |  |  | $\qquad$ consultations related toradiation effects and anxiety |
| :---: | :---: | :---: | :---: | :---: |
|  | 1st | 2nd | 3rd |  |
| FY2011 | Concerns about radiation effects and anxiety $\qquad$ | Physical and mental health of mothers 20.2\% | Child rearing (life) $14.0 \%$ | 29.2\% |
| FY2012 | Physical and mental health of mothers 33.4\% | Child rearing (life) <br> 26.7\% | Concerns about radiation effects and anxiety $23.7 \%$ | 23.7\% |
| FY2013 | Physical and mental health of mothers 42.5\% | Child rearing (life) 38.7\% | Physical and mental health of children 20.3\% | 17.1\% |
| FY2014 | Physical and mental health of mothers 49.5\% | Child rearing (life) 36.1\% | Family life $20.5 \%$ | 9.5\% |
| FY2015 | Physical and mental health of mothers 53.1\% | Child rearing (life) <br> 40.9\% | Family life $21.8 \%$ | 5.9\% |
| FY2016 | Physical and mental health of mothers 59.8\% | Child rearing (life) $43.4 \%$ | Family life $19.5 \%$ | 5.0\% |
| FY2017 | Physical and mental health of mothers 55.6\% | $\begin{array}{r} \text { Child rearing (life) } \\ 51.8 \% \end{array}$ | Family life $16.4 \%$ | 4.1\% |
| FY2018 | Physical and mental health of mothers 53.2\% | Child rearing (life) $41.4 \%$ | Physical and mental health of children 16.0\% | 3.4\% |
| FY2019 | Physical and mental health of mothers 48.1\% | Child rearing (life) $42.5 \%$ | Physical and mental health of children 12.1\% | 1.5\% |
| FY2020 | Child rearing (life) 54.5\% | Physical and mental health of mothers 52.0\% | Family life $11.2 \%$ | 0.6\% |

4.3Reasons for ending support (See Table 22)

Reasons for ending support include "listened carefully" (supporters listened carefully and helped to sort out the respondent's problems) in 494 cases ( $71.8 \%$ ), followed by "provided information" (supporters provided relevant information and administrative service contact information) in 359 cases ( $52.2 \%$ ), and "confirmed consultation availability" (supporters confirmed that the respondent had already seen a doctor or has someone to consult with) in 111 cases ( $16.1 \%$ ). Note: Multiple answers were allowed. The denominator of percentages is the total number of those requiring support.

### 4.4 Conclusions

- The proportion of support candidates based on depressive symptoms in FY2020 Survey was on par with FY2019.
- The most frequently discussed issue in the consultation in FY2020 was "child rearing (life)," followed by "physical and mental health of mothers," which had been the most frequently discussed issue since FY2012. Issues related to the effects and anxiety of radiation became less frequent over time.

## 5. Tabulated Results of Pregnancy and Birth Survey for FY2020

In the following tabulations, "Outside Fukushima" indicates those who temporarily returned to Fukushima to give birth. The survey questionnaires were distributed to them and responses were collected from them with cooperation of obstetric clinics and hospitals in Fukushima Prefecture.
5.1 Number of questionnaires sent and responses received
[Table 1-1] Number of distribution and response

| Region | Questionnaires sent |  | Responses received |  | Online responses |  |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: |
| Kenpoku | 2,784 | $24.5 \%$ | 1,640 | $58.9 \%$ | 564 | $34.4 \%$ |
| Kenchu | 3,387 | $29.8 \%$ | 1,844 | $54.4 \%$ | 594 | $32.2 \%$ |
| Kennan | 850 | $7.5 \%$ | 484 | $56.9 \%$ | 165 | $34.1 \%$ |
| Soso | 808 | $7.1 \%$ | 367 | $45.4 \%$ | 106 | $28.9 \%$ |
| Iwaki | 2,004 | $17.6 \%$ | 1,103 | $55.0 \%$ | 374 | $33.9 \%$ |
| Aizu | 1,356 | $11.9 \%$ | 764 | $56.3 \%$ | 222 | $29.1 \%$ |
| Minamiaizu | 100 | $0.9 \%$ | 64 | $64.0 \%$ | 17 | $26.6 \%$ |
| Outside |  |  |  |  |  |  |
| Fukushima | 93 | $0.8 \%$ | 93 | $100.0 \%$ | 34 | $36.6 \%$ |
| Total | 11,382 | $100.0 \%$ | 6,359 | $55.9 \%$ | 2,076 | $32.6 \%$ |

The total number of respondents is 6,330 out of 6,359 , with 29 invalid responses excluded.
Each category includes non-responses and invalid responses. Percentages have been rounded and may not total to $100 \%$
[Table 1-2] Age group of respondents (age is as of the time of occurrence i.e., delivery, stillbirth)

| Region | $\begin{gathered} \text { Ages } \\ 15-19 \end{gathered}$ |  | $\begin{gathered} \text { Ages } \\ 20-24 \end{gathered}$ |  | $\begin{gathered} \text { Ages } \\ 25-29 \end{gathered}$ |  | $\begin{gathered} \text { Ages } \\ 30-34 \end{gathered}$ |  | $\begin{gathered} \text { Ages } \\ 35-39 \end{gathered}$ |  | $\begin{gathered} \text { Ages } \\ 40-44 \end{gathered}$ |  | $\begin{gathered} \text { Ages } \\ 45-49 \end{gathered}$ |  | Nonresponse/ invalid response ${ }^{1)}$ |  | Total |

*Basically, a birth of twins is counted as 1 Delivered. However, for 3 cases of twins with different outcomes, the results were counted separately. For example, twin pregnancies with a sound delivery and a miscarriage are counted as 1 Delivered and 1 Miscarriage.

* A premature birth is one that occurs between 22 and 36 weeks of pregnancy.
${ }^{1)}$ The denominator for premature birth rates is the total number of deliveries $(6,334)$ excluding those who had an unknown number of fetuses, delivered at an unknown number of weeks, or delivered at less than 12 weeks, minus the number of deliveries at less than 22 weeks ( 0 ).

*1) The denominator of percentage is the sum of valid responses (those who responded either "yes" or "no" to the question on congenital anomalies in singletons).
The above incidence rates differ from those in the report on FY2011 survey results, which were calculated including invalid responses.
[Table 14-23] Incidence of diseases*1)
Responses from 137 respondents who answered "yes" to the question on birth defects/congenital anomalies in singletons (multiple answers were allowed).

| Region | Cataract | $\begin{aligned} & \text { Heart } \\ & \text { malform- } \\ & \text { ation } \end{aligned}$ | Kidney/ urinary tract anomaly | Spina bifida | Hydrocephalus | Cleft lip and palate | Anal atresia | Polydactyly <br> /Syndactyly | Other |

## Report on the Results of the Second Follow-up Survey Covering FY2012 Pregnancy and Birth Survey Respondents

## 1. Outline

(1) Purpose

To continue to provide support to those who were pregnant or nursing around the time of the 3.11 disaster, by assessing their health conditions through a second follow-up survey of FY2012 Pregnancy and Birth Survey (PBS) respondents.
(2) Background

The PBS found a high prevalence of depressive symptoms among respondents immediately after the disaster. Accordingly, follow-up surveys were conducted in FY2015 through FY2018, covering respondents of FY2011FY2014 surveys at four years post-partum, when loss of confidence in child rearing tends to increase.
Respondents to the FY2011 and FY2012 PBS showed strong concerns about radiation effects and high depressive symptoms. Such tendencies were also observed in their follow-ups, from which it was considered that they were still impacted by the disaster.
Respondents to the FY2013 and FY2014 PBS, on the other hand, indicated fewer depressive symptoms; their main concerns were general issues in child rearing. Therefore, in the FY2019 and FY2020 PBS, we conducted a second follow-up (and offered support) for the FY2011 and FY2012 PBS respondents, respectively, instead of the planned four-year post-partum follow-up for FY2015 and FY2016 PBS respondents.
(3) Covered population

Of FY2012 PBS respondents (excluding those who miscarried, terminated their pregnancy, or had a stillbirth), 5,152 persons, identified through municipal records to be living with children in their respective municipalities, were covered.
[For reference]

| Survey year | Survey | Covered respondents | No. of persons |
| :---: | :---: | :---: | :---: |
| FY2015 | First Follow-up | FY2011 PBS respondents | 7,252 |
| FY2016 |  | FY2012 PBS respondents | 5,602 |
| FY2017 |  | FY2013 PBS respondents | 5,734 |
| FY2018 |  | FY2014 PBS respondents | 5,856 |
| FY2019 | Second Follow-up | FY2011 PBS respondents | 6,643 |
| FY2020 |  | FY2012 PBS respondents | 5,152 |

(4) Survey methods
A. Survey sheet: self-administered questionnaire (post card)
B. Date of questionnaire distribution: January 15, 2021
C. Response methods: by post or online
*Online responses were accepted from January 15 to April 30, 2021.
(5) Survey items

The following items and a free comment section were in the questionnaire.
How many children do you have? ( )
How old is your youngest child? ( ) years and ( ) months
Q1. Do you usually consider yourself healthy?
$\square$ Yes, I think I am very healthy. $\quad$ Yes, I think I am healthy. $\quad$ No, I don't think I am so healthy.
$\square$ No, I don't think I am healthy.
Q2. Have you often felt down or depressed during the past month?
$\square$ Yes $\square$ No
Q3. During the past month, have you often felt uninterested in or unable to truly enjoy things? $\square$ Yes $\square$ No
Q4. Do you sometimes feel unconfident about child rearing?
$\square$ Yes $\square$ No $\quad \square$ Neither yes nor no
Q5. Please check all the boxes that describe what you are worried about regarding radiation effects. $\square$ Water $\square$ Food $\quad$ Your child's outdoor activities $\quad$ Your child's health $\quad$ Prejudice $\square$ Genetic effects $\quad$ OOther

Q6. Has your child ever had a disease that required hospitalization?
$\square$ Yes (disease name: ) $\quad$ No
Q7. Please check all the boxes that describe what you are anxious about regarding your child. $\square$ Mental and physical development $\square$ Diseases $\square$ Lifestyle habits $\quad$ School life $\square$ Other
(6) Data tabulation period

Responses returned from January 15 to August 31, 2021 were tabulated for this report.
[For reference]

| Survey Year | Survey | Data tabulation period <br> (Period for accepting online responses) |
| :---: | :---: | :---: |
| FY2015 | Follow-up Survey Covering FY2011 <br> Survey Respondents <br> ("First Follow-up for FY2011") | September 14, 2015-May 31, 2016 <br> (Online response was not available) |

| FY2019 | Second Follow-up Survey Covering FY201 <br> Survey Respondents <br> ("Second Follow-up for FY2011") | January 10-August 31, 2020 <br> (January 10-April 30, 2020) |
| FY2020 | Second Follow-up Survey Covering <br> FY2012 Survey Respondents <br> ("Second Follow-up for FY2012") | January 15-August 31, 2021 <br> (January 15-April 30, 2021) |

## 2. Interim summary of survey results

Survey results are as shown below in 5.1 through 5.3 , under " 5 . Tabulated Results of the Second Follow-up for FY2012." Note that the totals may not match the sum of valid responses due to missing values in each question item.
(1) Number of responses (response rate) (See Table 1)

The number of responses (response rate) in the Second Follow-up for FY2012 was 2,178 (42.3\%) and the number of valid responses was 2,178 (there were no invalid responses). Among them, the number of online responses (response rate) was 901 (41.4\%).
[For reference]

| Survey year | Survey | Total | Breakdown by response method |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Responses <br> (response rate) | by post | online | Percentage of <br> online responses |  |
| FY2015 | First Follow-up <br> for FY2011 | 2,554 <br> $(35.2 \%)$ | 2,554 | - | - |
| FY2016 | First Follow-up <br> for FY2012 | 2,021 <br> $(36.1 \%)$ | 1,719 | 302 | $14.9 \%$ |
| FY2017 | First Follow-up <br> for FY2013 | 2,706 <br> $(47.2 \%)$ | 2,062 | 644 | $23.8 \%$ |
| FY2019 | Second Follow-up <br> for FY2011 | 2,354 <br> for FY2014 <br> $(35.4 \%)$ | 1,641 | 713 | $30.3 \%$ |
| FY2020 | 2,719 <br> Second Follow-up <br> for FY2012 | 2,178 <br> $(42.3 \%)$ | 1,277 | 901 | $41.4 \%$ |

(2) Number of responses, by area of residence (See Table 1)

The number of responses (with response rates in parentheses) by area of residence in the Second Follow-up for FY2012 was as follows: 713 (51.7\%) in Kenpoku, 579 (39.7\%) in Kenchu, 154 (38.6\%) in Kennan, 106 (34.0\%) in Soso, 352 (36.8\%) in Iwaki, 248 (42.0\%) in Aizu, and 26 (48.1\%) in Minamiaizu.

| Survey year | Survey | Respondents by district (\%) |  |  |  |  |  |  |

(3) Maternal mental health conditions (See Table 4-7)
A. The proportion of mothers who responded that their subjective health was poor ("Not so healthy" or "Not healthy") was $9.4 \%$. The proportion was $9.3 \%$ in the First Follow-up for FY2012, four years prior (Q1).
[For reference]

| Survey | Second <br> Follow-up | First <br> Follow-up | Main Survey |
| :---: | :---: | :---: | :---: |
| FY2011 survey <br> respondents | $9.8 \%$ | $9.6 \%$ | No applicable <br> question |
| FY2012 survey <br> respondents | $9.4 \%$ | $9.3 \%$ | $3.8 \%$ |
| FY2013 survey <br> respondents | - | $7.9 \%$ | $3.7 \%$ |

| FY2014 survey <br> respondents | - | $7.9 \%$ | $3.9 \%$ |
| :---: | :---: | :---: | :---: |

B. The proportion of mothers who were deemed as having depressive symptoms was $27.1 \%$. The proportion was $25.7 \%$ in the First Follow-up for FY2012, four years prior (Q2, Q3)
[For reference]

| Survey | Second <br> Follow-up | First <br> Follow-up | Main Survey |
| :---: | :---: | :---: | :---: |
| FY2011 survey <br> respondents | $24.3 \%$ | $25.6 \%$ | $27.1 \%$ |
| FY2012 survey <br> respondents | $27.1 \%$ | $25.7 \%$ | $25.5 \%$ |
| FY2013 survey <br> respondents | - | $23.5 \%$ | $24.5 \%$ |
| FY2014 survey <br> respondents | - | $22.5 \%$ | $23.4 \%$ |

Reference: According to the 2010 national survey to assess toddlers' health status (conducted by the Japanese Society of Child Health), $21.8 \%$ of mothers with children aged 1 to 6 years (pre-school) responded that they cannot say they are in good mental condition.
(4) Family life and child rearing (See Table 8)

The proportion of mothers who responded that they sometimes feel unconfident about child rearing was $18.8 \%$. The proportion was $18.2 \%$ in the First Follow-up for FY2012, four years prior (Q4).
[For reference]

| Survey | Second <br> Follow-up | First <br> Follow-up | Main Survey |
| :---: | :---: | :---: | :---: |
| FY2011 survey <br> respondents | $19.1 \%$ | $15.8 \%$ | No applicable <br> question |
| FY2012 survey <br> respondents | $18.8 \%$ | $18.2 \%$ | $15.4 \%$ |
| FY2013 survey <br> respondents | - | $16.7 \%$ | $17.5 \%$ |
| FY2014 survey <br> respondents | - | $17.7 \%$ | $16.6 \%$ |

Reference: According to the 2010 national survey to assess toddlers' health status
(conducted by the Japanese Society of Child Health), $23.0 \%$ of mothers with children
aged 1 to 6 (pre-school children) responded that they sometimes feel unconfident about child rearing.
(5) Anxiety about radiation effects (See Table 9)

The proportion of mothers who checked at least one box in the list of anxieties about radiation effects was $84.0 \%$. Among them, the proportion of those who checked the box for the child's health was $62.8 \%$ (Q5).
[For reference]

| Survey | Those who checked at least one box <br> for anxiety about radiation effects |  | Those who checked the box for <br> child's health |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Second <br> Follow-up | First <br> Follow-up | Second <br> Follow-up | First <br> Follow-up |

| FY2012 survey <br> respondents | $84.0 \%$ | $90.9 \%$ | $62.8 \%$ | $68.7 \%$ |
| FY2013 survey <br> respondents | - | $87.5 \%$ | - | $66.3 \%$ |
| FY2014 survey <br> respondents | - | $85.4 \%$ | - | $63.3 \%$ |

(6) Children's health conditions and mothers' anxiety about their children (See Tables 10-1, 10-2, and 11)
A. The proportion of mothers who responded that hospitalization had been required for a child's disease was $27.2 \%$. Major diseases for hospitalization included pneumonia, respiratory syncytial virus infection, bronchitis, and Kawasaki disease (Q6).
[For reference]

| Survey | Second <br> Follow-up | First <br> Follow-up |
| :---: | :---: | :---: |
| FY2011 survey <br> respondents | $26.5 \%$ | $24.7 \%$ |
| FY2012 survey <br> respondents | $27.2 \%$ | $24.4 \%$ |
| FY2013 survey <br> respondents | - | $23.7 \%$ |
| FY2014 survey <br> respondents | - | $25.3 \%$ |

B. The proportion of mothers who checked at least one box in the list of anxieties about their children was 72.5\% (Q7).
[For reference]

| Survey | Those who checked at <br> least one box for anxiety <br> about their children |  | Those who checked the <br> box for anxiety about <br> physical and mental <br> development | Those who checked the <br> box for anxiety about <br> diseases |  |  |

| FY2013 survey <br> respondents | - | $61.2 \%$ | - | $57.4 \%$ | - | $40.4 \%$ |
| FY2014 survey <br> respondents | - | $63.4 \%$ | - | $56.9 \%$ | - | $38.7 \%$ |

(7) Content of free comments (See Tables 12-1 and 12-2)

A total of 248 respondents (11.4\%) wrote comments in the free comment section. The most frequently raised topics were those related with the COVID 19 pandemic, positive comments about this survey, and consultation about child rearing.

(8) Conclusion

The proportion of mothers with depressive symptoms in the Second Follow-up for FY2012 Survey Respondents showed a temporal increase, compared with the FY2012 Main Survey eight years prior and the First Follow-up for FY2012 four years prior.
There was also an increase in the proportion of mothers with anxieties about their children and the proportion of mothers with poor subjective health while the proportion of mothers with anxieties about radiation effects showed a decline.
A. The response rate was $42.3 \%$, which is higher than the First Follow-up for FY2012, four years prior.
B. $9.4 \%$ of the respondents had poor subjective health (those who responded "not so healthy" or "not healthy"). This was at a similar level compared with the First Follow-up for FY2012, four years prior.
C. $27.1 \%$ of the respondents had depressive symptoms, and a temporal increase was shown compared with the FY2012 Main Survey eight years prior and the First Follow-up for FY2012 four years prior. It was also higher than the Second Follow-up for FY2011 conducted last year.
D. $84.0 \%$ of the respondents checked at least one box in the list of anxieties about radiation effects. This was a decrease from the First Follow-up for FY2012 four years prior and the Second Follow-up for FY2011 last year.
E. $72.5 \%$ of the respondents checked at least one box in the list of anxieties about their children. This was higher than the First Follow-up for FY2012 four years prior and the Second Follow-up for FY2011 last year. Most common anxiety was about physical and mental development of their children (52.2\%).
F. There were $11.4 \%$ of the respondents who wrote in the free comment section. The most frequently raised topic was the COVID 19 pandemic, followed by positive comments about this survey and consultation about child rearing.

## 3. Outline of Post-Survey Support

(1) Purpose

To address anxieties of the Second Follow-up of FY2012 Survey respondents who were deemed to be in need of counselling and support by providing telephone/online counselling and support from midwives and public health nurses.
(2) Support eligible respondents (See Table 13)

Among respondents to the Second Follow-up for the FY2012 Survey, those who were judged to be needed telephone counselling or support ("support required respondents").
(3) Selection criteria for providing support (See Table 14)

Respondents who fall under either one of the following:
A: Those who responded "yes" to two questions regarding depressive symptoms (Q2, Q3)
B: Those who wrote comments implying the need for support (in the free comment section or other parts of the questionnaire)
e.g., any comments in which we can see or perceive severe depression, need of support in child rearing, anxieties about radiation levels, poor health conditions, request for direct response or counseling, or request for support.
(4) Methods

Telephone and email counselling and support

## 4. Summary of Results of Post-Survey Support

Detailed results of post-survey support are as shown below in 5. Interim Results of the Second Follow-up for the FY2012 Survey Respondents, subpart (4) Implementation status of post-survey support,
(1) Number of respondents requiring support (See Tables 13 and 14)

Of 2,178 respondents from January 15 to August 31, 2021, there were 386 who were judged to be needed telephone counselling and support.
Since the FY2017 Survey, we started to include as candidates for support those who expressed specific anxieties in places other than the questionnaire's free comment section. As a result, the proportion of respondents requiring support was $17.7 \%$ in total, with $13.2 \%$ based on Criteria A and $4.5 \%$ based on Criteria $B$.
[For reference]

* If a respondent falls under both Criteria A and B, the person was counted as a support candidate based on Criteria A.
(2) Topics mentioned during support provision (See Table 15)

The most common topics mentioned by respondents were "mother's own physical and mental health conditions" (32.9\%), followed by "child rearing (daily life)" (18.9\%), based on the same support criteria as those in the previous follow-up surveys.
The proportion of "questions and anxiety about radiation effects" was $8.3 \%$.
[For reference]

*1 The support criteria and data entry method (questionnaire format, data entry staff, etc.) were changed in the First Follow-up for FY2013 and those that followed.
*2 This criterion was added in the First Follow-up for FY2013 and those that followed.
(3) Reasons for ending support (See Table 16)

The most common reasons for ending support were "listened carefully" (supporters listened carefully and helped to sort out the respondent's problems) in 217 cases (56.2\%), followed by "provided information" (supporters provided information on relevant municipal contact points and other useful information) in 107 cases (27.7\%). Support ended because support required respondents were "absent" at the time of phone call in 73 cases (18.9\%). (Note: Multiple answers allowed.)
[For reference]

| Survry <br> Year | Survey | No. 1 reason | No. 2 reason | No. 3 reason | Absent |
| :---: | :---: | :---: | :---: | :---: | :---: |
| FY2015 | First Follow-up for FY2011 | Listened carefully*1 197(52.5\%) | Provided information *2 105(28.0\%) | Confirmed consultation availability *3 29(7.7\%) | 131 (34.9\%) |

| FY2019 | Second Followup for FY2011 | Listened carefully 217(51.5\%) | Provided information 98(23.3\%) | Confirmed consultation availability 37(8.8\%) | 98 (23.3\%) |
| FY2020 | Second Followup for FY2012 | Listened carefully 217(56.2\%) | Provided information 107(27.7\%) | Confirmed consultation availability 32(8.3\%) | 73 (18.9\%) |

[^9](4) Conclusion
A. The proportion of those deemed to be needed support based on the questions asking about depressive symptoms was $13.2 \%$, and this is an increase from last year's Second Follow-up for FY2011.
B. The most frequently mentioned topics during support was "mother's physical and/or mental health" according to the same criteria for support that were used in the previous follow-up surveys. "Questions and anxieties about radiation effects" decreased from the First Follow-up for FY2012 four years prior but increased from the Second Follow-up for FY2011 last year.
C. The most common reason for ending support was "listened carefully" (supporters listened carefully and helped the mother sort out her problems).

## 5．Interim Results of the Second Follow－up for FY2012

Covered population：5，152 respondents of the FY2012 Pregnancy and Birth Survey，who gave a live birth and were confirmed to be living with their children as of September 2020
Tabulated responses： 2,178 responses received from January 15 to August 31，2021．Survey sheets were sent out by post on January 15， 2021.
＊The sum of individual percentages for each question item may not add up to $100 \%$ ，due to rounding．
（1）Number of survey sheets sent and returned

（2）Tabulated results by question item
Responses from 2，178 respondents were tabulated（invalid responses：0）．Individual question items may contain non－responses or invalid responses．

【Table 2】 How many children do you have？

| Region | Total | Minimum | Maximum | Valid <br> responses |
| :--- | :---: | :---: | :---: | :---: |
| Kenpoku | $2.4 \pm 0.9$ | 1 | 7 | 693 |
| Kenchu | $2.4 \pm 0.9$ | 1 | 6 | 560 |
| Kennan | $2.4 \pm 0.9$ | 1 | 5 | 148 |
| Soso | $2.5 \pm 0.9$ | 1 | 5 | 100 |
| Iwaki | $2.3 \pm 0.9$ | 1 | 7 | 342 |
| Aizu | $2.5 \pm 0.8$ | 1 | 6 | 235 |
| Minamiaizu | $2.5 \pm 0.8$ | 1 | 4 | 26 |
| Total | $2.4 \pm 0.9$ | 1 | 7 | 2,104 |

【Table 3】How old is your youngest child（in months）？

| Region | Total | Minimum | Maximum | Valid <br> responses |
| :--- | :---: | :---: | :---: | :---: |
| Kenpoku | $78.0 \pm 28.5$ | 0 | 115 | 673 |
| Kenchu | $77.1 \pm 29.4$ | 0 | 113 | 550 |
| Kennan | $81.1 \pm 27.0$ | 3 | 119 | 144 |
| Soso | $76.3 \pm 29.4$ | 1 | 116 | 95 |
| Iwaki | $78.1 \pm 27.9$ | 2 | 118 | 338 |
| Aizu | $78.5 \pm 28.4$ | 3 | 109 | 231 |
| Minamiaizu | $79.5 \pm 30.9$ | 8 | 104 | 24 |
| Total | $78.0 \pm 28.6$ | 0 | 119 | 2,055 |

【Table 4】Do you usually consider yourself healthy？（Q1）
The proportion of mothers who responded that their subjective health was poor（＂Not so healthy＂or＂Not healthy＂）was 9．4\％

| Region | Very healthy |  | Healthy |  | Not so healthy |  | Not healthy |  | Non－response／ <br> invalid responses | Total |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| Kenpoku | 94 | $13.2 \%$ | 555 | $77.8 \%$ | 57 | $8.0 \%$ | 6 | $0.8 \%$ | 1 | $0.1 \%$ |
| Kenchu | 84 | $14.5 \%$ | 435 | $75.1 \%$ | 50 | $8.6 \%$ | 7 | $1.2 \%$ | 3 | $0.5 \%$ |
| Kennan | 28 | $18.2 \%$ | 113 | $73.4 \%$ | 11 | $7.1 \%$ | 1 | $0.6 \%$ | 1 | $0.6 \%$ |
| Soso | 18 | $17.0 \%$ | 76 | $71.7 \%$ | 10 | $9.4 \%$ | 2 | $1.9 \%$ | 0 | $0.0 \%$ |
| Iwaki | 70 | $19.9 \%$ | 248 | $70.5 \%$ | 31 | $8.8 \%$ | 3 | $0.9 \%$ | 0 | $0.0 \%$ |
| Aizu | 39 | $15.7 \%$ | 181 | $73.0 \%$ | 23 | $9.3 \%$ | 3 | $1.2 \%$ | 2 | $0.8 \%$ |
| Minamiaizu | 6 | $23.1 \%$ | 19 | $73.1 \%$ | 1 | $3.8 \%$ | 0 | $0.0 \%$ | 0 | $0.0 \%$ |
| Total | 339 | $15.6 \%$ | 1,627 | $74.7 \%$ | 183 | $8.4 \%$ | 22 | $1.0 \%$ | 7 | $0.3 \%$ |
| FY2019 | 362 | $15.4 \%$ | 1,753 | $74.5 \%$ | 199 | $8.5 \%$ | 32 | $1.4 \%$ | 8 | $0.3 \%$ |

【Table 5】Have you often felt down or depressed during the past month？（Q2）

| Region | Yes |  | No |  | Non－response／ <br> invalid responses | Total |  |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| Kenpoku | 184 | $25.8 \%$ | 524 | $73.5 \%$ | 5 | $0.7 \%$ | 713 |
| Kenchu | 134 | $23.1 \%$ | 441 | $76.2 \%$ | 4 | $0.7 \%$ | 579 |
| Kennan | 29 | $18.8 \%$ | 124 | $80.5 \%$ | 1 | $0.6 \%$ | 154 |
| Soso | 21 | $19.8 \%$ | 83 | $78.3 \%$ | 2 | $1.9 \%$ | 106 |
| Iwaki | 89 | $25.3 \%$ | 261 | $74.1 \%$ | 2 | $0.6 \%$ | 352 |
| Aizu | 72 | $29.0 \%$ | 176 | $71.0 \%$ | 0 | $0.0 \%$ | 248 |

| Request for financial support | $0.4 \%$ |  |
| Request regarding Fukushima Health Management Survey | $0.4 \%$ |  |
| Others | 2 | 0.3 |

[^10]（4）Status of post－survey support
Number of respondents requiring support in the Second Follow－up for FY2012 was 386 （17．7\％of 2，178 respondents）
Tabulation of data regarding post－survey support is based on 2,178 responses returned between January 15 and August 31， 2021.

【Table 13】 Number and proportion of respondents requiring support，by Region

| Region | Respondents | Support required <br> respondents |  |
| :--- | ---: | ---: | ---: |
| Kenpoku | 713 | 144 | $20.2 \%$ |
| Kenchu | 579 | 87 | $15.0 \%$ |
| Kennan | 154 | 20 | $13.0 \%$ |
| Soso | 106 | 15 | $14.2 \%$ |
| Iwaki | 352 | 62 | $17.6 \%$ |
| Aizu | 248 | 53 | $21.4 \%$ |
| Minamiaizu | 26 | 5 | $19.2 \%$ |
| Total | 2,178 | 386 | $17.7 \%$ |
| FY2019 | 2,354 | 421 | $17.9 \%$ |

＊The denominator for percentage calculations is the number of respondents．
【Table 14】Breakdown of respondents requiring support，by Region

| Region | Support based on <br> depression <br> symptoms |  | Support based on the <br> content of free comments |  | Total |
| :--- | ---: | ---: | ---: | ---: | ---: |
| Kenpoku | 108 | $75.0 \%$ | 36 | $25.0 \%$ | 144 |
| Kenchu | 70 | $80.5 \%$ | 17 | $19.5 \%$ | 87 |
| Kennan | 10 | $50.0 \%$ | 10 | $50.0 \%$ | 20 |
| Soso | 11 | $73.3 \%$ | 4 | $26.7 \%$ | 15 |
| Iwaki | 45 | $72.6 \%$ | 17 | $27.4 \%$ | 62 |

* The denominator for percentage calculations is the number of respondents requiring support. The numbers are cumulative totals. The sum of individual percentages may be other than $100 \%$ because multiple answers were allowed.

1) Support ended after listening carefully and helping to sort out the mother's problems.
2) Support ended after providing information on relevant municipal service contact points and other useful information.
3) Support ended after confirming that the mother has already consulted doctors or other specialists.
4) Support ended after answering questions from the mother.
5) Support ended after recommending that the mother seek medical consultation.
6) Support ended after forwarding the mother's information to FMU's Mental Health Support Team (with consent).
7) Support ended after forwarding the mother's information to relevant sections of the municipality of residence (with consent).
8) Support ended after forwarding the mother's information to FMU's radiation consultation desk (with consent).
9) Support ended after forwarding the mother's information to medical specialists at FMU.

# Summary of the Results of the Pregnancy and Birth Survey, Fukushima Health Management Survey (FY2011-FY2020) 

## 1. Purpose and Outline of the Survey

The Pregnancy and Birth Survey (PBS) was conducted every year from FY2011 to FY2020 with the aim of properly ascertaining physical and mental health conditions of pregnant women intending to give birth and raise children in Fukushima, and alleviating their worries and providing them with necessary care.
The PBS found a high prevalence of depressive symptoms among respondents immediately after the disaster. Accordingly, the first round of Follow-up Survey was also conducted from FY2015 (covering FY2011 Survey respondents) to FY2018 (covering FY2014 Survey respondents), at four years after childbirth, when the number of mothers who lose confidence about rearing their children tends to increase and there are no health checks for their children.

The Follow-up Surveys revealed that FY2011 and FY2012 Survey respondents showed strong concerns about radiation effects and high depressive symptoms and that a certain number of respondents to the FY2013 Survey still considered that their subjective health was poor, had depressive symptoms, or were worried about radiation effects. Therefore, it was decided to conduct the second round of Follow-up Surveys from FY2019 (covering FY2011 Survey respondents) to FY2022 (covering FY2014 Survey respondents), at eight years after childbirth.

## 2. Outline of the Survey and Support

(1) Main Survey

Covered population

- Women who obtained a maternity handbook from municipalities in Fukushima
- Women who obtained a maternity handbook somewhere else but received prenatal health checks and gave birth in Fukushima

## Survey items

- Pregnancy outcomes and health status of the child
- Mental health of pregnant and nursing mothers
- Current living conditions (evacuation, family separation)
- Childbirth status and maternal health status during pregnancy
- Confidence in child rearing
- Expectations for the next pregnancy

## Survey methods

Survey sheets were sent by post, asking them to fill in the sheets and send them back by post. The online response system was newly introduced in FY2016.
(2) Follow-up Survey

Covered population
Respondents to the Main Surveys conducted from FY2011 to FY2014 (excluding those having a miscarriage, an abortion, or a stillbirth) who have been confirmed to be alive along with their children through inquiries to their respective municipalities (See [For reference] below.)

Survey items

- Mental health of pregnant and nursing mothers
- Confidence in child rearing
- Worries over radiation effects
- Hospitalization of children
- Worries over children

## Survey methods

Survey sheets were sent by post, asking them to fill in the sheets and send them back by post. The online response system was newly introduced in FY2016.

(3) Provision of support

Criteria for providing support
Respondents who fall under either of the following:
A. Those who responded "yes" to questions regarding depressive symptoms
B. Those who wrote comments that suggest the need for support (in the free comment section or other parts of the questionnaire)
e.g., Those who wrote comments suggesting severe depression, the need for support in child rearing, anxieties about radiation levels, poor health conditions, request for concrete responses, or request for support

## Support methods

A. Check the content of survey responses promptly after we receive them and identify respondents who seem to be in need of support.
B. Midwives and public health nurses of the Radiation Medical Science Center for the Fukushima Health Management Survey provide counseling and support by phone sequentially.
C. When any case requiring more specialized responses is found through telephone support, the case is referred to specialized physicians. For women for whom regional support is found to be necessary, requests are made to municipalities where they reside to ask for further responses.
D. Consultations are accepted at the email address and the phone line dedicated for the Pregnancy and Birth Survey and support is provided accordingly.

## 3. Survey Results

(1) Number of covered populations, number of responses, and response rate

The response rate of the Main Survey has remained at around 50\% for ten years, showing a high level of people's interest. By district, the response rate was especially high at over $60 \%$ in Kenpoku and Soso immediately after the earthquake, but has shown no notable changes in all districts thereafter. The covered population, which temporarily decreased in FY2012, immediately after the earthquake, recovered in FY2013 but has been on a decline in the same manner as the trend of the number of births nationwide.
The response rate of the Follow-up Survey has been increasing, although being slightly lower than that of the Main Survey. By district as well, the response rates for the last two surveys were higher than before for all districts.

【Number of surveys sent, number of responses, and response rate】 (Main Survey)

Source: Summary of 2020 Vital Statistics(Final Data), List of Statistical Surveys conducted by Ministry of Health Labour and Welfare.

【Response rate by region】（Main Survey）

【Number of surveys sent，number of responses，response rate】（Follow－up Survey）

【Response rate by district】（Follow－up Survey）

（2）Summary of responses
A．Pregnancy outcome（percentages of preterm births and congenital abnormalities or anomalies）
The results of FY2011 survey to FY2020 survey showed almost no differences from data of government statistics and other generally published data for each fiscal year．The percentages of congenital anomalies by district also showed no difference．
＊National average percentage of preterm births for FY2020：5．5\％（preterm births：births at a gestational age from 22 weeks to less than 36 weeks）
＊
The percentage of morphological abnormalities（fetal anomalies）identifiable at the time of birth is generally $3 \%$ to $5 \%$ and the causes are diverse（＂Guidelines for Obstetrical Practice in Japan：Obstetrics 2020＂）

【Preterm birth rate】（Main Survey）

【Congenital anomaly incidence rate（singleton）】（Main Survey）

【Congenital anomaly incidence rate（singleton），by district】（Main Survey）

B．Mothers＇mental health（percentage of those with depressive symptoms）
The number of mothers who answered＂yes＂to both or either of the questions＂Do you feel depressed？＂ and＂Do you feel uninterested in things？＂and＂Do you feel uninterested in things？＂was rather large in the earlier surveys but has been decreasing thereafter．

【Change in the percentage of those with depressive symptoms】（Main Survey and Follow－up Survey）

C．Care for pregnancy and delivery
The percentage of mothers unsatisfied with the perinatal care they received was decreasing over time after FY2012，but increased in FY2020 survey．

【Percentage of those unsatisfied with perinatal care】（Main Survey）

| Survey year | Those who answered＂no＂or <br> ＂not at all＂ |
| :---: | :---: |
| FY2011 | No applicable question |
| FY2012 | $3.5 \%$ |
| FY2013 | $2.3 \%$ |
| FY2014 | $2.7 \%$ |
| FY2015 | $2.4 \%$ |
| FY2016 | $2.1 \%$ |
| FY2017 | $1.7 \%$ |
| FY2018 | $1.7 \%$ |
| FY2019 | $1.4 \%$ |
| FY2020 | $3.9 \%$ |

D．Status of family life and child rearing（percentages of mothers who are living a refugee life and mothers not confident in child rearing）
－The percentage of mothers who responded that they are living a refugee life is decreasing year by year．
－The percentage of mothers who responded that they sometimes feel unconfident in child rearing has remained slightly less than $20 \%$ since immediately after the earthquake up until now．

【Percentages of those living a refugee life】（Main Survey）

| Survey year | Those still under evacuation <br> in temporary and other type of <br> housing） |
| :---: | :---: |
| FY2011 | No applicable question |
| FY2012 | $7.7 \%$ |
| FY2013 | $5.5 \%$ |
| FY2014 | $4.9 \%$ |
| FY2015 | $3.8 \%$ |
| FY2016 | $3.4 \%$ |
| FY2017 | $2.3 \%$ |
| FY2018 | $1.8 \%$ |
| FY2019 | $1.6 \%$ |
| FY2020 | $1.2 \%$ |

【Percentages of those who sometimes feel unconfident in child rearing】（Main Survey and Follow－ up Survey）

| Survey year | Main Survey | Follow－up Survey |
| :---: | :---: | :---: |
| FY2011 | No applicable question | - |
| FY2012 | $15.4 \%$ | - |
| FY2013 | $17.5 \%$ | - |
| FY2014 | $16.6 \%$ | - |
| FY2015 | $17.7 \%$ | $15.8 \%$ |
| FY2016 | $16.6 \%$ | $18.2 \%$ |
| FY2017 | $18.1 \%$ | $16.7 \%$ |
| FY2018 | $17.7 \%$ | $17.7 \%$ |
| FY2019 | $18.8 \%$ | $19.1 \%$ |
| FY2020 | $17.5 \%$ | $18.8 \%$ |

E．Anticipation for the next pregnancy and delivery
The percentage of mothers wishing to have another child has been constantly over $50 \%$ since the earthquake．Mothers who cited worries over radiation effects as a reason for not wishing to have another child accounted for less than $1 \%$ in the most recent survey．

【Anticipation for the next pregnancy and delivery】（Main Survey）

| Survey year | Those anticipating another <br> pregnancy | Those not anticipating another <br> pregnancy due to worries about <br> radiation effects |
| :---: | :---: | :---: |
| FY2011 | No applicable question | No applicable question |
| FY2012 | $52.9 \%$ | $14.8 \%$ |
| FY2013 | $52.8 \%$ | $5.6 \%$ |
| FY2014 | $57.1 \%$ | $3.9 \%$ |
| FY2015 | $53.3 \%$ | $1.6 \%$ |
| FY2016 | $54.6 \%$ | $1.2 \%$ |
| FY2017 | $52.4 \%$ | $0.8 \%$ |
| FY2018 | $52.2 \%$ | $0.5 \%$ |
| FY2019 | $51.3 \%$ | $0.5 \%$ |
| FY2020 | $50.0 \%$ | $0.2 \%$ |

F．Worries over radiation effects
The percentage of mothers who put a checkmark to at least one question regarding worries over radiation effects has been decreasing year by year，and among such mothers，the percentage of those who responded that they have worries over children＇s health conditions has also been decreasing year by year．

【Percentage of those who have worries over radiation effects】（Follow－up Survey）

| Respondents | Those who checked at least one box for <br> anxiety about radiation effects |  | Those who checked the box for <br> child＇s health |  |
| :---: | :---: | :---: | :---: | :---: |
|  | First Follow－up | Second Follow－up | First Follow－up | Second Follow－up |
| FY2011 PBS <br> respondents | $94.2 \%$ | $87.2 \%$ | $79.5 \%$ | $68.1 \%$ |
| FY2012 PBS <br> respondents | $90.9 \%$ | $84.0 \%$ | $68.7 \%$ | $62.8 \%$ |
| FY2013 PBS <br> respondents | $87.5 \%$ | - | $66.3 \%$ | - |
| FY2014 PBS <br> respondents | $85.4 \%$ | - | $63.3 \%$ | - |

G．Free comments（percentages of mothers who wrote free comments and mothers who mentioned worries over radiation effects on fetuses and children，in particular）
The percentage of mothers who wrote free comments on their worries over radiation effects on fetuses and children in the Main Survey was nearly $30 \%$ immediately after the commencement of the survey but has been decreasing year by year to below $1 \%$ recently．

【Number of respondents who wrote free comments】（Main Survey and Follow－up Survey）

| Survey year | Main Survey | Follow－up Survey |
| :---: | :---: | :---: |
| FY2011 | $3,722(42.2 \%)$ | - |
| FY2012 | $1,481(20.7 \%)$ | - |
| FY2013 | $867(12.0 \%)$ | - |
| FY2014 | $745(10.5 \%)$ | - |
| FY2015 | $1,101(15.7 \%)$ | $383(15.0 \%)$ |
| FY2016 | $965(13.3 \%)$ | $186(9.2 \%)$ |
| FY2017 | $799(12.4 \%)$ | $208(7.7 \%)$ |
| FY2018 | $881(13.4 \%)$ | $198(7.3 \%)$ |
| FY2019 | $818(13.0 \%)$ | $304(12.9 \%)$ |
| FY2020 | $871(13.8 \%)$ | $248(11.4 \%)$ |

【Percentage of those who mentioned worries over radiation effects on fetuses and children】

| Survey year | Main Survey | Follow－up Survey |
| :---: | :---: | :---: |
| FY2011 | $29.6 \%$ | - |
| FY2012 | $26.4 \%$ | - |
| FY2013 | $12.9 \%$ | - |
| FY2014 | $9.5 \%$ | - |
| FY2015 | $5.2 \%$ | $13.8 \%$ |
| FY2016 | $6.1 \%$ | $12.4 \%$ |
| FY2017 | $4.8 \%$ | $11.5 \%$ |
| FY2018 | $1.8 \%$ | $7.1 \%$ |
| FY2019 | $2.1 \%$ | $17.4 \%$ |
| FY2020 | $0.5 \%$ | $14.9 \%$ |

（3）Results of support
A．Provision of support
For mothers，out of the respondents of the survey，who were judged to be in need of consultations and support based on their responses，midwives and public health nurses provide consultations and support by phone or by email．The percentage of mothers in need of support identified based on their responses to questions regarding depressive symptoms in the Main Survey has decreased by nearly $50 \%$ from the level immediately after the earthquake and the percentage identified through the Follow－up Surveys has also been on a decline．Since FY2012，the coverage of support has been expanded to include those suspected to be in need of support from the content of their free comments and the percentage of those in need of support marked 10．8\％in FY2020．

【Change in the number of support candidates】(Main Survey)

## B. Topics of consultations

Through the main survey, support by phone has been provided to nearly 1,000 mothers every fiscal year, but the number of targets has been decreasing recently. Details of the consultations have varied by fiscal year. Consultations on worries over radiation and its effects were most common immediately after the earthquake but have decreased over time. Since FY2012, consultations on mothers' mental and physical health and matters concerning child rearing (daily life) have been increasing and have become dominant.

In the follow-up survey, the number of consultations on mothers' mental and physical health has constantly been the largest since the commencement of the survey in FY2015. Consultations on worries over radiation and its effects have been decreasing year by year.

【Topics mentioned during telephone support】(Main Survey)

|  | No. 1 | No. 2 | No. 3 | No. 4 | No. 5 |

（Exclude＂The support needed due to comment section of other topics＂form FY2013 First follow－up survey and onwards，

【Questions and anxiety about radiation effects】（Main Survey and Follow－up Survey）

## C．Referral to other organizations

When an urgent need for referral to a municipal office is found based on responses to the survey，such as deterioration in psychological symptoms，difficulties in child rearing，child neglect，abuse，or domestic violence，a request for support is made to a service office of the relevant municipality after consulting with a member of the Expert Committee responsible for the Pregnancy and Birth Survey and obtaining consent from the relevant mother concerning the referral to the service office．

| Seek advice from the <br> Office of the Mental <br> Health and Lifestyle <br> Survey and Care |  |

Obtain the respondent＇s consent on providing the information to external organizations

## 4. Publication of Survey Results and Feedback to Communities

- The latest survey results are made available on the website of the Radiation Medical Science Center for the Fukushima Health Management Survey, Fukushima Medical University.
- From FY2014 to FY2017, we held briefing sessions to explain survey results in five districts of the prefecture (Kenpoku, Kennan, Soso, Aizu, and Iwaki).
- Since FY2015, we have reported the outline of the survey results to public health nurses, etc. at meetings of personnel in charge of maternal and child health of all municipalities held by the prefectural government.
- Since FY2019, we have directly visited 13 municipalities designated as evacuation zone, and have individually reported the survey results.
- We prepared a leaflet to outline the survey and explain the outcomes and sent copies thereof together with survey sheets to all intended survey respondents and also delivered them to municipalities and obstetrics and gynecology clinics and other medical facilities.
- On the occasions of the public symposium hosted by the Fukushima Medical Association and the "Iki Iki Kenko Zukuri (Live with Vitality) Forum" hosted by the Health Promotion Center, we displayed panels showing the survey results and delivered the leaflet.

## 5. Efforts for Raising Response Rates

- From the FY2016 Main Survey, the online response system was newly introduced for the convenience of respondents. Combined use of the paper-based response system and the online response system contributed to raising response rates. Both systems have advantages, but it was found that respondents using the paper-based response system generally expressed their feelings and opinions more clearly.
- In collaboration with municipalities, we conducted a questionnaire regarding the volume and the content of survey items of the Main Survey in FY2014 and utilized the results in revising the survey content. We also posted requests for cooperation to the survey on municipal PR magazines.
- As the Main Survey contains questions concerning a health examination for one-month old babies, we started to deliver survey sheets on three occasions considering mothers' due dates from the FY2014 survey so that mothers could respond to those questions on a timely basis.
- We reviewed and decreased the questions to alleviate respondents' burden.
- We sent a reminder or sent survey sheets again to encourage participation from persons not making responses.
- We conducted a survey to check the status of responses among the targets of the FY2014 survey. We selected one municipality each from the Hamadori area, Nakadori area and Aizu area, and conducted a questionnaire with approximately 100 mothers who came to receive a health examination for three to four-month old babies ( 30 to 40 mothers per municipality) to obtain suggestions concerning survey methods.

## 6. Roles Having Been Played by the Survey

(1) Demonstrating the safety of pregnancy and childbirth in the prefecture

The survey clarified changes in the percentages of preterm births and congenital anomalies in Fukushima over time and showed that those percentages were the same as figures of nationwide surveys and general standards, thereby presenting the safety of getting pregnant and giving birth in Fukushima. In particular, in support by phone for mothers having high depressive symptoms and strong concerns about the possibility of congenital anomalies, we made a special effort to explain the results of the survey in the prefecture and the safety of getting pregnant and giving birth to reassure them. We also published papers based on the survey data, and compiled the major outcomes of those research papers prepared in four years as an interim report.
(2) Opportunities for watching over the health of pregnant and nursing mothers and providing support through the survey

The survey conducted every year has contributed to continuously observing pregnant women in Fukushima and ascertaining their circumstances individually and has led to the provision of concrete support.
(3) Implementation of interactive support

- For mothers who are judged to be in need of support based on the survey results (including those who cannot seek support by themselves), supporters have made phone calls to ascertain the current situation and provide support on a case-by-case basis. The survey results have been used to identify cases requiring individual visit support and to refer such cases to respective
municipalities.
- We prepared a dedicated phone line and email account to make it easier for anyone to make consultations and also established a contact point to receive consultations from the mothers.
(4) Cooperation with organizations involved in obstetrics, gynecology, and related disciplines, and establishment of support systems
- We requested obstetrics and gynecology physicians and other organizations for the cooperation in delivering survey sheets and referred mothers judged in need of specialized support to them, thereby promoting continued support for those mothers.
- We visited the Fukushima Midwives Association and built a system for collaboration, asking the association for assistance with the main survey and provision of consultations for such mothers as those who experienced a stillbirth.
- We aimed to strengthen collaboration with medical facilities through informing them of mothers' requests entered in survey sheets via the Fukushima Society of Obstetrics and Gynecology and the Fukushima Obstetrics and Gynecology Association.
(5) Close collaboration with municipalities

We have referred mothers in need of urgent measures or continued support identified based on their responses to the survey or the results of support by phone to responsible personnel of the respective municipalities and have provided support to those mothers in collaboration therewith.
(6) Information sharing on the current status of and issues related to maternal and child health (with the prefecture, municipalities, and related organizations)

- Since FY2013, explanations have been provided directly by physicians at briefing sessions to explain survey results to groups of public health nurses or hospital nurses, and other related organizations in Fukushima and meetings of municipal personnel in charge of maternal and child health hosted by the prefectural government. For the FY2017 Main Survey, at meetings with personnel of the 13 municipalities in the Hamadori area, we explained the situation of each municipality and conducted opinion exchanges to share information.
- Upon requests from municipalities, we provided survey results for the respective municipalities separately.
(7) Response to anxieties about radiation
- From the first Main Survey in FY2011 until the FY2013 Main Survey, we prepared a support book to help children and their guardians maintain their good physical and mental health and sent copies thereof to intended survey respondents. From FY2012, we sent the support book together with the survey sheet to each of the intended respondents to ensure that the information would directly reach guardians worrying about radiation effects.
- From the FY2014 Main Survey and the Follow-up Survey, we prepared a leaflet to outline the survey and explain the outcomes and sent copies thereof together with survey sheets. We also sent copies to cooperative medical facilities and relevant organizations in the prefecture to disseminate the survey results.
(8) Support to supporters

In order to further enhance qualities of supporters who provide support by phone so that they would be able to properly respond to mothers' worries and questions, we have encouraged them to acquire specialized knowledge and conduct case studies, and have provided them with training concerning knowledge on radiation and the thyroid gland, thereby promoting their appropriate responses to wideranging consultations.
(9) Noteworthy achievements

- We have been able to maintain high response rates. There were criticisms concerning the survey, but there were also words of thanks and encouraging remarks. We have simplified questions and introduced an online response system and have secured enough space for free comments since the first survey. Additionally, we have provided support by phone or by email. All these efforts are considered to have contributed to gaining people's approval for the survey.
- We could announce the fact that the percentages of stillbirths, preterm births, low birth-weight babies, and congenital anomalies in Fukushima have been at the same levels as the national averages.
- We have visited respective areas in Fukushima to directly explain survey results to responsible
municipal personnel and this has raised people's interest in the survey and has enabled us to smoothly provide support to those in need of help in collaboration with municipalities. We received the following comments from municipal personnel in charge of maternal and child health who participated in briefing sessions: "I understand the current status of Fukushima Prefecture. It was very helpful." "Today's explanations will serve as useful information when I respond to consultations concerning child rearing by phone or at the time of a health examination and visit support."

Summary of published papers
1 The percentages of stillbirths ( $0.25 \%$ ), preterm births (4.4\%), low birth-weight babies (8.7\%), and congenital anomalies ( $2.72 \%$ ) were almost the same as the national averages of those percentages in Japan.

Pregnancy and Birth Survey after the Great East Japan Earthquake and Fukushima Daiichi Nuclear Power Plant Accident in Fukushima Prefecture
Fujimori K, et al. Fukushima J Med Sci. 2014;60(1):75-81.
2 Mothers found to have depressive symptoms accounted for $28 \%$ throughout the prefecture. The percentage was high for mothers in the Soso district and those who changed obstetric care facilities, but was low for mothers in the Iwaki and Aizu districts.

Immediate effects of the Fukushima nuclear power plant disaster on depressive symptoms among mothers with infants: A prefectural-wide cross-sectional study from the Fukushima Health Management Survey Goto A, et al. BMC Psychiatry. 2015 Mar 26;15:59.

3 In Fukushima, depressive symptoms were observed more frequently among mothers who experienced a miscarriage or stillbirth than among those who had a live birth.

IMMEDIATE MENTAL CONSEQUENCES OF THE GREAT EAST JAPAN EARTHQUAKE AND FUKUSHIMA NUCLEAR POWAR PLANT ACCIDENT ON MOTHERS EXPERIENCING MISCARRIAGE, ABORTION, AND STILLBIRTH: THE FUKUSHIMA HEALTH MANAGEMENT SURVEY
Komiya H, et al. Fukushima J Med Sci. 2015;61(1):66-71.
4 Changes of obstetric care facilities due to medical reasons often result in preterm births. However, no association was observed between preterm births and changes of obstetric care facilities by mothers by themselves.

Effect of medical institution change on gestational duration after the Great East Japan Earthquake: The Fukushima Health Management Survey
Suzuki K, et al. J Obstet Gynaecol Res. 2016 Dec;42(12):1704-1711.
5 No influence of the earthquake was observed in the growth of one-month-old babies. In the Soso area, the percentage of mothers using powdered milk showed an increasing trend over time after the earthquake.

Impact of the Great East Japan Earthquake on feeding methods and newborn growth at 1 month postpartum: results from the Fukushima Health Management Survey. Kyozuka H, et al. Radiat Environ Biophys. 2016 May;55(2):139-46.

6 A significantly larger percentage of mothers who used to live in the evacuation zone and who could not receive prenatal health checks as scheduled used powdered milk due to worries over radioactive contamination.

Factors Associated with Infant Feeding Methods after the Nuclear Power Plant Accident in Fukushima: Data from the Pregnancy and Birth Survey for the Fiscal Year 2011 Fukushima Health Management Survey.
Ishii K, et al. Matern Child Health J. 2016 Aug;20(8):1704-12.
7 Women who became pregnant within six months after the earthquake showed higher percentages of preterm births and low birth-weight babies, and cases of respiratory diseases and mental disorders increased.

Obstetric outcomes in women in Fukushima prefecture during and after the Great East Japan Earthquake and Fukushima nuclear power plant accident: The Fukushima Health Management Survey
Hayashi M, et al. Open Journal of Obstetrics and Gynecology, 2016, 6, 705-713
8 A significantly larger percentage of mothers who were forced to change prenatal health checks and obstetric care facilities, those with high-risk pregnancy, those who had a Caesarean, and those who gave birth to their first babies are receiving support by phone. They use powdered milk more often than those who do not receive support, worrying about radiation effects.

Characteristics of Mothers in Need of Support by Phone after the Accident at the Tokyo Electric Power Company's Fukushima Daiichi Nuclear Power Station and the Details of Consultations - Based on the Pregnancy and Birth Survey, Fukushima Health Management Survey in FY2011 -
Kayoko Ishii, et al., Japan Society of Maternal Health (2016)
9 Mothers whose babies were SGA (small-for-gestational-age) accounted for $5.6 \%$. Areas where they lived at the time of the accident at the NPS and the timing of getting pregnant did not exert any influence on the occurrence of SGA.

Influence of the Great East Japan Earthquake and the Fukushima Daiichi Nuclear Disaster on the Birth Weight of Newborns in Fukushima Prefecture: Fukushima Health Management Survey.
Yasuda S, et al. J Matern Fetal Neonatal Med. 2017 Dec;30(24):2900-2904
10 The use of ART temporarily decreased in Fukushima immediately after the Great East Japan Earthquake but no long-term influence of the earthquake has been observed.

Impact of the Great East Japan Earthquake and Fukushima nuclear power plant accident on assisted
reproductive technology in Fukushima prefecture: The Fukushima Health Management Survey Hayashi M, et al. J Clin Med Res. 2017 Sep;9(9):776-781.

11 A refugee life and worries over radiation were associated with depressive symptoms, but were not associated with a low confidence in child rearing.

The Fukushima Nuclear Accident Affected Mothers' Depression but Not Maternal Confidence.
Goto A, et al. Asia Pac J Public Health. 2017 Mar;29(2_suppl):139S-150S.
12 The percentages of those aged 30 or older and those with depressive symptoms were higher among mothers who entered free comments in the survey sheet than those who did not. Mothers' concerns shifted from radiationrelated problems to their own physical and mental health.

Fukushima mothers' concerns and associated factors after the Fukushima nuclear power plant disaster: analysis of qualitative data from the Fukushima Health Management Survey 2011-2013
Ito S, et al. Asia Pac J Public Health. 2017 Mar;29(2_suppl):151S-160S.
13 Major research papers based on the results of the surveys for four years were compiled.
Pregnancy and Birth Survey of the Fukushima Health Management Survey: Review of four surveys conducted annually after the disaster
Ishii K, et al. Asia Pac J Public Health. 2017 Mar;29(2_suppl):56S-62S. Review.
$1441.2 \%$ of the surveyed mothers felt worries due to prejudice and discrimination and their such worries are especially associated with their age, whether they have depressive symptoms, whether they received prenatal health checks as scheduled, and whether they have developed any new diseases or symptoms after the earthquake.

Overview of the Pregnancy and Birth Survey section of the Fukushima Health Management Survey: Focusing on mother's anxieties toward radioactive exposure
Ito S, et al. Journal of the National Institute of Public Health 201867 (1) 59-70
15 Mothers who used to live in the evacuation zone and those still living a refugee life are more likely to show depressive tendencies significantly. In particular, mothers who are living a refugee life separately from some of their family members and those who did not respond that they have good communications with their family members showed a higher percentage of having depressive symptoms.

Consideration of Refugee Life and Mental Health of Pregnant Women Caused by the Great East Japan Earthquake
Ota Misao, et al., Journal of the Japan Maternal and Infant Caring Association (2018)
16 Pregnant women who were in later pregnancy at the time of the earthquake showed increased risks of hypertensive disorders of pregnancy.

The effect of the Great East Japan Earthquake on Hypertensive Disorders during pregnancy: A study from the Fukushima Health Mangement Survey
Kyozuka H, et al. J Matern Fetal Neonatal Med. 2019 Apr 1:1-6.
17 In the case of mothers having only one child, worries over radiation are associated with their reluctance to have another child.

Factors associated with intention of future pregnancy among women affected by the Fukushima Nuclear Accident: Analysis of Fukushima Health Management Survey Data from 2012 to 2014
Goto A, et al. J Epidemiol. 2019 Aug 5;29(8):308-314
18 By combining a paper survey and an online survey, the response rate has been raised. Respondents to the paperbased survey generally expressed their feelings and opinions more clearly.

Development and Implementation of an Internet Survey to Assess Community Health in the Face of a Health Crisis: Data from the Pregnancy and Birth Survey of the Fukushima Health Management Survey, 2016 Nakano H, et al. Int J Environ Res Public Health. 2019 Jun 1;16(11). pii: E1946.

## Report on the TUE Full-Scale Survey (the fourth-round survey)

As of September 30, 2021

## 1. Summary

### 1.1 Purpose

In order to monitor the long-term health of children, we continued the Full-Scale Survey (now fourthround survey), following the Preliminary Baseline Survey for initial assessment of thyroid glands, and two Full-Scale Surveys (the second- and third-round surveys) to continuously monitor the status of thyroid glands.

### 1.2 Eligible Persons

All Fukushima residents $\sim 18$ years old or younger at the time of the Great East Japan Earthquake (those born between April 2, 1992 and April 1, 2012).

### 1.3 Implementation Period

FY2018 and FY2019, starting in April 2018:
1.3-1 For those 18 years old or younger

The examination will be carried out on a municipality-by-municipality basis in FY2018 and FY2019.
1.3-2 For those 19-24 years old

The examination will be carried out on an age group basis (i.e., school grade).
FY2018: those born in FY1996 and FY1998
FY2019: those born in FY1997 and FY1999
1.3-3 For those 25 years old and older

Those who are older than 20 are recommended to receive the examination every 5 years at the ages of 25,30 , and so on.

FY 2018: those born in FY1993
FY 2019: those born in FY1994
Results of the survey for those 25 years old will be reported separately.
1.4 Implementing Organizations (Number of medical facilities and institutions with agreements for conducting of thyroid examinations, as of September 30, 2021)

Fukushima Prefecture commissioned Fukushima Medical University (FMU) to conduct the survey in cooperation with organizations inside and outside Fukushima for the convenience of participants.

## 1.4-1 Primary examination facilities <br> Inside Fukushima Prefecture 84 medical facilities <br> Outside Fukushima Prefecture 127 medical facilities

> 1.4-2 Confirmatory examination facilities
> Inside Fukushima Prefecture $\quad 5$ medical facilities including FMU
> Outside Fukushima Prefecture $\quad 37$ medical facilities

### 1.5 Method

1.5-1 Primary examination

Ultrasonography of the thyroid gland
Assessments are made by specialists on the basis of the following criteria:

- Grade A

A1: No nodules/cysts
A2: Nodules $\leq 5.0 \mathrm{~mm}$ and/or cysts $\leq 20.0 \mathrm{~mm}$

- Grade B

Nodules $\geq 5.1 \mathrm{~mm}$ and/or cysts $\geq 20.1 \mathrm{~mm}$
Some A2 results may be re-classified as B results when clinically indicated.

- Grade C

Prompt confirmatory examination warranted, based on clinical judgment of initial results.
1.5-2 Confirmatory examination

Ultrasonography of the thyroid gland, blood and urine tests, and fine needle aspiration cytology (FNAC) if needed for those with Grade B or C results.
Priority is given to those in urgent clinical need. A medical follow-up may be recommended based on confirmatory examination results.

## 1.5-3 Flow chart

Fig. 1 Flow chart

### 1.6 Municipalities Surveyed

The municipalities where examinations (for those 18 years old or younger) were carried out in FY2018 and FY2019 are as follows:

Fig. 2 Municipalities surveyed in FY2018 and FY2019
Note: Primary examinations that had been scheduled in March 2020 at elementary and junior high schools in Iwaki City but postponed due to COVID-19 pandemic were conducted in September and October of 2020.

## 2. Results as of September 30, 2021

### 2.1 Results of the Primary Examination

## 2.1-1 Implementation status

The examination was carried out for 183,383 participants ( $62.3 \%$ ) by September 30, 2021 (Implementation status for each municipality and prefectures other than Fukushima are shown in Appendix 1 and Appendix 2).
Results of 183,373 participants (100.0\%) have been finalized and individual result report were already sent to them. (The result for each municipality is shown in Appendix 3).
Of these, 61,700 ( $33.6 \%$ ) had Grade A1 results, 120,281 (65.6\%) had Grade A2, 1,392 (0.8\%) had Grade $B$, and none had Grade C.

Table 1 Progress and results of the primary examination

|  | Eligible persons | Participants (\%) |  |  | Participants with finalized results (\%) |  |  |  |  |  |  |  |  |  |

[^11]2.1-3 Comparison of the third- and fourth-round survey results

Comparison of results of two Full-Scale Surveys (third- and fourth-round surveys) is shown in Table 4.
Among 163,665 participants with Grade A1 or A2 results in the third-round survey, 162,986 (99.6\%) had Grade A1 or A2 results, and 679 ( $0.4 \%$ ) had Grade B results in the fourth-round survey.

Among 731 participants with Grade B results in the third-round survey, 148 (20.2\%) had Grade A1 or A2 results, and 583 ( $79.8 \%$ ) had Grade B results in the fourth-round survey.

### 2.2 Results of the Confirmatory Examination

## 2.2-1 Implementation status

By September 30, 2021, 1,031 (74.1\%) of 1,392 people have received the examination. Of those, 1,004 ( $97.4 \%$ ) had completed the entire process of the confirmatory examination. (Progress and results of the confirmatory examination are shown in Table 5.)
Of the aforementioned 1,004 participants, 94 (9.4\%) were confirmed to meet Grade A diagnostic criteria by the primary examination standards (A1: 6, A2: 88) (including those with other thyroid conditions).
The remaining $910(90.6 \%)$ were confirmed to be outside of A1/A2 criteria.
Table 5 Progress and results of the confirmatory examination

|  | Those referred to confirmatory exams <br> a | Participants (\%) |  | Those with finalized results (\%) |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

2.2-2 Results of fine needle aspiration cytology (FNAC)

Among those who underwent FNAC, 37 had nodules classified as malignant or suspicious for malignancy: 17 of them were male, and 20 were female.

Participants' age at the time of the confirmatory examination ranged from 9 to 24 years (mean age: $16.7 \pm 3.0$ years). The minimum and maximum tumor diameters were 6.1 mm and 29.4 mm . Mean tumor diameter was $13.4 \pm 6.3 \mathrm{~mm}$.

Of these 37 participants, 25 had Grade A results (A1: 6, A2: 19) and 9 had Grade B results in the thirdround survey. The remaining 3 people did not participate in the third-round survey.

Table 6. Results of FNAC

- Mean tumor size $\pm$ SD (min - max):
$13.4 \pm 6.3 \mathrm{~mm}(6.1-29.4 \mathrm{~mm})$

[^12]
## 2.2-3 Age distribution of malignant or suspicious-for-malignancy cases diagnosed by FNAC

Age distributions of 37 people with malignant or suspicious nodules based on their age as of March 11, 2011 is per Fig. 3, and age distribution based on their age at the time of confirmatory examination is per Fig. 4.

Fig. 3 Age as of March 11, 2011
Note: Those aged between 15 and 18 at the time of disaster are not included in the fourth-round survey participants.
The horizontal axis begins at -1 to include Fukushima Prefecture residents born between April 2, 2011 and April 1, 2012.
*Those born between March 12 and April 1, 2011 are included in age 0.

Fig. 4 Age as of the date of confirmatory examination
2.2-4 Basic Survey results of those with malignant or suspicious nodules by FNAC Of the 37 people with malignant or suspicious nodules, 19 people ( $51.4 \%$ ) had participated in the Basic Survey (for external radiation dose estimation), and all 19 received their results. The highest effective dose documented was 2.4 mSv .

Table 7 A breakdown of dose estimates for Basic Survey participants

| Effective <br> dose (mSv) | Age at the time of the disaster |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## 2.2-5 Blood and urinary iodine test results

Table 8 Blood test results

| Reference Range | $\begin{gathered} \text { FT4 }^{1)} \\ (\mathrm{ng} / \mathrm{dL}) \\ \hline \end{gathered}$ | $\begin{gathered} \mathrm{FT3}^{2)} \\ (\mathrm{pg} / \mathrm{mL}) \\ \hline \end{gathered}$ | $\begin{gathered} \mathrm{TSH}^{3)} \\ (\mu \mathrm{IU} / \mathrm{mL}) \\ \hline \end{gathered}$ | $\begin{gathered} \mathrm{Tg}^{4)} \\ (\mathrm{ng} / \mathrm{mL}) \\ \hline \end{gathered}$ | $\begin{gathered} \mathrm{TgAb}^{5)} \\ (\mathrm{IU} / \mathrm{mL}) \end{gathered}$ | $\begin{aligned} & \left.\mathrm{TPOAb}^{6}\right) \\ & (\mathrm{IU} / \mathrm{mL}) \end{aligned}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 0.95-1.74 ${ }^{7}$ | $2.13-4.07^{7)}$ | 0.340-3.880 ${ }^{7}$ | $\leq 33.7$ | < 28.0 | $<16.0$ |
| $\begin{aligned} & \text { Malignant or } \\ & \text { suspicious: } \end{aligned}$ | $1.3 \pm 0.1$ (2.7\%) | $3.6 \pm 0.5$ (0.0\%) | $1.3 \pm 0.7$ (2.7\%) | $32.4 \pm 53.1$ (24.3\%) | 37.8\% | 24.3\% |
| Other: 925 | $1.2 \pm 0.2$ (5.1\%) | $3.5 \pm 0.7$ (6.8\%) | $1.2 \pm 0.8$ (7.8\%) | $32.9 \pm 113.8$ (16.8\%) | 6.8\% | 6.9\% |

Table 9 Urinary iodine test results ( $\mu \mathrm{g} / \mathrm{day}$ )
$\left.\begin{array}{|r|c|c|c|c|c|}\hline & & \text { Minimum } & \text { 25th percentile } & \text { Median } & 75 \text { th percentile } \\ \text { Maximum } \\ \hline \begin{array}{r}\text { Malignant or } \\ \text { suspicious: }\end{array} & 37 & 35 & 94 & 200 & 432\end{array}\right] 1,783$

1) FT4: free thyroxine; thyroid hormone binding 4 iodines; higher among patients with thyrotoxicosis (such as Graves' disease) and lower with hypothyroidism (such as Hashimoto's thyroiditis).
2) FT3: free triiodothyronine; thyroid hormone binding 3 iodines; higher among patients with thyrotoxicosis (such as Graves' disease) and lower with hypothyroidism (such as Hashimoto's thyroiditis).
3) TSH: thyroid-stimulating hormone; higher among patients with Hashimoto's disease and lower with Graves' disease.
4) Tg: thyroglobulin; higher when thyroid tissue is destroyed or when neoplastic tissue produces thyroglobulin.
5) TgAb: anti-thyroglobulin antibody; higher among patients with Hashimoto's disease and Graves' disease.
6) TPOAb: anti-thyroid peroxidase antibody; higher among patients with Hashimoto's disease or Graves' disease.
7) Reference interval varies according to age.

## 2.2-6 Confirmatory examination results by area

The percentages of those with malignant or suspicious nodules were $0.03 \%$ in Hamadori and $0.02 \%$ in Nakadori and Aizu, versus $0.01 \%$ in the 13 municipalities of the nationally-designated evacuation zone.

Table 10 Confirmatory examination results by area

|  | Number of participants $\mathrm{a}$ | Those referred to confirmatory exam b | Percentage of b <br> (\%) <br> b/a | Confirmatory exam participants | Malignant or suspicious cases | Percentage of c <br> (\%) <br> c/a |

4) Aizuwakamatsu, Kitakata, Shimogo, Hinoemata, Tadami, Minami-aizu, Kitashiobara, Nishiaizu, Bandai, Inawashiro, Aizubange, Yugawa, Yanaizu, Mishima, Kaneyama, Showa, Aizumisato

## 3. Mental Health Care

We provide the following support for thyroid examination participants.

### 3.1 Support for Primary Examination Participants

After the examination, medical doctors offer person-to-person explanation of examination results, showing the ultrasound images in private consultation booths at examination venues set up in public facilities.

Consultation booths were set up at all venues for examinations conducted in and after April 2018; as of September 30, 2021, 2,648 of 2,649 participants (100\%) have visited these consultation booths.

### 3.2 On-location Lectures and Information Sessions

To help participants or their parents/guardians improve their understanding of the thyroid examination, we have conducted on-location lectures and information sessions since April 2018.

By March 31, 2020, a total of 1,063 people had participated in these sessions, offered at 32 locations.

### 3.3 Support for Confirmatory Examination Participants

A support team has been set up within Fukushima Medical University to offer psychological support to address anxieties and concerns of confirmatory examination participants during examination. The team also answers questions and offers counseling via our website.

Since the start of the fourth-round survey, 483 participants ( 163 males and 320 females) have received support as of September 30, 2021. The number of support sessions provided was 957 in total. Of these, 480 ( $50.2 \%$ ) received support at the participants' first examination and 477 ( $49.8 \%$ ) at subsequent examinations.

For those who proceeded to regular insured medical care, the support team continues to provide support in cooperation with teams of medical staff at hospitals.

44_TUE(EN)2_Report on the TUE Full-Scale Survey (the fifth-round survey) Report on the TUE Full-Scale Survey (the fifth-round survey)

As of September 30, 2021

## 1. Summary

### 1.1 Purpose

In order to monitor the long-term health of children, we continue the Full-Scale Survey (now fifth-round survey), following the Preliminary Baseline Survey for initial assessment of thyroid glands, and three Full-Scale Surveys (second-, third-, and fourth-round surveys) to continuously monitor the status of thyroid glands.

### 1.2 Eligible persons

All Fukushima residents $\sim 18$ years old or younger at the time of earthquake (those born between April 2, 1992 and April 1, 2012).

### 1.3 Implementation Period

FY2020 and FY2022, starting in April 2020:
1.3-1 For those 18 years old or younger

The examination implementation period covers 3 years, from FY2020 through FY2022.
1.3-2 For those 19 years old or older

The examination will be carried out on an age group basis (i.e., school grade).
FY2020: those born in FY1998 and FY2000
FY2021: those born in FY1999 and FY2001
FY2022: N/A
1.3-3 For those 25 years old or older

Those who are older than 20 are recommended to receive the examination every 5 years.
FY2020: those born in FY1995
FY2021: those born in FY1996
FY2022: those born in FY1997
Results of the survey for those 25 years old will be reported separately.
1.4 Implementing Organizations (Number of medical facilities with agreements for conducting thyroid examinations as of September 30, 2021)
Fukushima Prefecture commissioned Fukushima Medical University (FMU) to conduct the survey in cooperation with organizations inside and outside Fukushima for the convenience of participants (the number of medical facilities shown below is as of March 31, 2021).

## 1.4-1 Primary examination facilities <br> Inside Fukushima Prefecture 84

Outside Fukushima Prefecture 127

## 1.4-2 Confirmatory examination facilities <br> Inside Fukushima Prefecture 5 including FMU <br> Outside Fukushima Prefecture 37

### 1.5 Methods

1.5-1 Primary examination

Ultrasonography of the thyroid gland
Multiple specialists assess examination results based on the following criteria:

- Grade A

A1: No nodules/cysts
A2: Nodules $\leq 5.0 \mathrm{~mm}$ or cysts $\leq 20.0 \mathrm{~mm}$

- Grade B

## B: Nodules $\geq 5.1 \mathrm{~mm}$ or cysts $\geq 20.1 \mathrm{~mm}$

Some A2 results may be re-classified as B results when clinically indicated.
-Grade C
C: Prompt confirmatory examination warranted, based on clinical judgment of initial results.

## 1.5-2 Confirmatory examination

Ultrasonography of the thyroid gland, blood and urine tests, and fine needle aspiration cytology (FNAC, if needed) for those with B or C test results.
Priority is given to those in urgent clinical need. A medical follow-up may be recommended based on confirmatory exam results.

## 1.5-3 Flow chart

Fig. 1 Flow chart

### 1.6 Municipalities Surveyed

The municipalities where examinations (for those 18 years old or younger) were carried out in FY2020 and FY2021 are as follows:

Fig. 2 Municipalities covered for primary examinations at elementary and junior high schools

$\square$ Primary examinations in FY2021 (25 municipalities)
$\square$ Primary examinations in FY2022 (34 municipalities)

Fig. 3 Municipalities covered for primary examinations at high schools and other facilities

Results of these surveys were aggregated based on the year when examinations were originally scheduled, which may differ from the year in which some examinations were actually conducted.

## 2. Results as of September 30, 2021

### 2.1 Results of the Primary Examination

2.1-1 Implementation status

The primary examination was carried out for 45,860 participants (18.1\%) by September 30, 2021.
Results of 38,136 participants ( $83.2 \%$ ) have been finalized and individual result reports were already sent to them.

Of these, 11,689 (30.7\%) had Grade A1 results, 25,989 (68.1\%) had Grade A2, 458 (1.2\%) had Grade B, and none had Grade C.

Table 1 Progress and results of the primary examination

|  | Eligible persons <br> a | Participants (\%) |  | c (c/b) | Participants with finalized results (\%) |  |  |  |

| Total | 252,855 | 45,860 (18.1) | 6,028 | 38,136 (83.2) | 11,689 (30.7) | 25,989 (68.1) | 458 (1.2) | 0 (0.0) |

Table 2 Number and proportion of participants with nodules/cysts
(See Appendix 1 for more details)

|  | Participants with finalized results <br> a | Participants with nodules/cysts (\%) |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Nodules |  | Cysts |  |
|  |  | $\begin{array}{lr} \geq 5.1 \mathrm{~mm} \\ b & (\mathrm{~b} / \mathrm{a}) \end{array}$ | $\begin{array}{lr} \hline \leq 5.0 \mathrm{~mm} \\ \mathrm{c} & (\mathrm{c} / \mathrm{a}) \\ \hline \end{array}$ | $\begin{array}{cr} \geq 20.1 \mathrm{~mm} \\ \text { d } & (\mathrm{d} / \mathrm{a}) \end{array}$ | $\begin{array}{lr} \hline \leq 20.0 \mathrm{~mm} \\ \mathrm{e} & (\mathrm{e} / \mathrm{a}) \\ \hline \end{array}$ |
| FY2020 | 33,142 | 336 (1.0) | 159 (0.5) | 1 (0.0) | 22,868 (69.0) |
| FY2021 | 4,994 | 122 (2.4) | 50 (1.0) | 0 (0.0) | 3,368 (67.4) |
| Total | 38,136 | 458 (1.2) | 209 (0.5) | 1 (0.0) | 26,236 (68.8) |

- Proportions are rounded to a lower decimal place. This applies to other tables as well.
- Those who receive the examination at 5-year intervals (born between FY1992 and FY1997) are excluded. The results of examinations with 5 -year intervals will be shown separately.
- Examinations for those born in FY1992 (approx. 23,000), FY1993 (approx. 22,000), FY1994 (approx. 22,000), FY1995 (approx. 21,000) took place in FY2017, FY2018, FY2019, and FY2020, respectively. Examinations for those born in FY1996 (approx. 21,000) and FY1997 (approx. 20,000 ) will be carried out in FY2021 and FY2022, respectively.
2.1-2 Participation rate by age group

The participation rate for each age group as of April 1 of each year is shown in Table 3.
Table 3 Participation rates by age group

|  |  |  | Total |  | ge group |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| FY2020 | Age group* |  |  | 8-11 | 12-17 | 18-24 |
|  | Eligible persons | (a) | 144,868 | 37,072 | 61,908 | 45,888 |
|  | Participants | (b) | 39,686 | 16,983 | 19,218 | 3,485 |
|  | Participation rate (\%) | (b/a) | 27.4 | 45.8 | 31.0 | 7.6 |
| FY2021 | Age group ** |  |  | 9-11 | 12-17 | 18-24 |
|  | Eligible persons | (a) | 107,987 | 19,724 | 45,057 | 43,206 |
|  | Participants | (b) | 6,174 | 770 | 2,286 | 3,118 |
|  | Participation rate (\%) | (b/a) | 5.7 | 3.9 | 5.1 | 7.2 |
| Total | Eligible persons | (a) | 252,855 | 56,796 | 106,965 | 89,094 |
|  | Participants | (b) | 45,860 | 17,753 | 21,504 | 6,603 |
|  | Participation rate (\%) | (b/a) | 18.1 | 31.3 | 20.1 | 7.4 |

- Age groups are formed with the age as of April 1 of each fiscal year.
2.1-3 Comparison of the fourth- and fifth-round survey results

Comparison of results of two Full-Scale Surveys (fourth- and fifth-round surveys) is shown in Table 4.
Among 35,175 participants with Grade A1 or A2 results in the fourth-round survey, 34,941 (99.3\%) had Grade A1 or A2 results and $234(0.7 \%)$ had Grade B results in the fifth-round survey.

Among 200 participants with Grade B results in the fourth-round survey, 30 (15.0\%) had Grade A1 or A2 results and 170 ( $85.0 \%$ ) had Grade B results in the fifth-round survey.

### 2.2 Results of the Confirmatory Examination

## 2.2-1 Implementation status

By September 30, 2021, 238 (52.0\%) of 458 eligible persons had participated in the confirmatory examination, and 210 ( $88.2 \%$ ) of them had completed the entire procedure of the examination.

Of the aforementioned 210 participants, 22 (10.5\%) were confirmed to meet A1 (2)or A2 (20) diagnostic criteria by the primary examination standards (including those with other thyroid conditions) after detailed examination; 188 (89.5\%) were confirmed to be outside of A1/A2 criteria.

2.2-2 Results of fine needle aspiration cytology (FNAC)

Among those who underwent FNAC, 6 people (1 male, 5 females) had nodules classified as malignant or suspicious for malignancy.

Participants' age at the time of the confirmatory examination ranged from 13 to 22 (mean age: $16.8 \pm 3.4$ years). The minimum and maximum tumor diameters were 8.1 mm and 14.7 mm . Mean tumor diameter was $11.4 \pm 2.5 \mathrm{~mm}$.

Of these 6 participants, 3 had Grade A (A1:1, A2:2), 2 had Grade B at the fourth-round survey, and remaining one person did not participate the Survey.

1) FT4: free thyroxine; thyroid hormone binding 4 iodines; higher among patients with thyrotoxicosis (such as Graves' disease) and lower with hypothyroidism (such as Hashimoto's thyroiditis).
2) FT3: free triiodothyronine; thyroid hormone binding 3 iodines; higher among patients with thyrotoxicosis (such as Graves' disease) and lower with hypothyroidism (such as Hashimoto's thyroiditis).
3) TSH: thyroid-stimulating hormone; higher among patients with Hashimoto's disease and lower with Graves' disease.
4) Tg: thyroglobulin; higher when thyroid tissue is destroyed or when neoplastic tissue produces thyroglobulin.
5) TgAb: anti-thyroglobulin antibody; higher among patients with Hashimoto's disease and Graves' disease.
6) TPOAb: anti-thyroid peroxidase antibody; higher among patients with Hashimoto's disease or Graves' disease.
7) Reference interval varies according to age.

## 3. Mental Health Care

We provide the following support for thyroid examination participants.

### 3.1 Support for Primary Examination Participants

After the examination, medical doctors offer person-to-person explanation on examination results, showing ultrasound images in private consultation booths at examination venues set up in public facilities.

Consultation booths were set up at all venues for examinations conducted in and after April 2020, and as of September 30, 2021, all 1,397 participants ( $100 \%$ ) have visited these consultation booths.

### 3.2 On-location Lectures and Information Sessions

To help participants and their parents/guardians improve their understanding of the thyroid examination, we have conducted on-location lectures and information sessions since April 2018.

By September 30, 2021, a total of 392 people participated in these sessions offered at 6 locations.
Since the start of these sessions, 15,478 people have participated.

### 3.3 Support for Confirmatory Examination Participants

A support team has been set up within Fukushima Medical University to offer psychological support to address the anxieties and concerns of confirmatory examination participants during examination. The team also answers questions and offers counseling via our website.

Since the start of the fifth-round survey, 141 participants ( 49 males and 92 females) have received support as of September 30, 2021. The number of support sessions provided was 236 in total. Of these, 141 (59.7\%) received support at the participants' first examination and 95 (40.3\%) at subsequent examinations.

For those who proceeded to regular insured medical care, the support team continues to provide support in cooperation with teams of medical staff at hospitals.

## Report on the TUE Full-Scale Survey (Survey for Age 25+)

As of September 30, 2021

## 1. Summary

### 1.1 Eligible Persons

Among Fukushima residents 18 years old or younger at the time of disaster (born between April 2, 1992 and April 1,2012), those who turn 25 years old during each fiscal year, including those who moved out of the prefecture, are invited to receive a thyroid ultrasound examination (TUE).

Persons born in FY1996 are among those eligible for the Survey for Age 25, but participation rate was low. Therefore, this report includes the status of the following participants groups:

- Those born in FY1992 (between April 2, 1992 and April 1, 1993)
- Those born in FY1993 (between April 2, 1993 and April 1, 1994)
- Those born in FY1994 (between April 2, 1994 and April 1, 1995)
- Those born in FY1995 (between April 2, 1995 and April 1, 1996)

### 1.2 Implementation Period

The Survey for Age 25+ (hereinafter "Age 25+ Survey") started in FY2017 for those who turn 25 years old during each fiscal year. If residents cannot receive the examination in the year they turn 25 , they are entitled to one any time through the fiscal year prior to the year they turn 30 (see Fig. 1 for the implementation schedule of Age $25+$ Survey).

Eligible persons are invited to take examinations every 5 years at age 25,30 , etc.

- Beginning in FY2017, examinations are offered to those who turn age 25 in each fiscal year.
- Invitations for the examination will be sent to those who turn age 25 in the fiscal year marked with $\star$.

Fig. 1 Implementation schedule for Age 25+ Survey

## 2. Results as of September 30, 2021

### 2.1 Results of the Primary Examination

2.1-1 Implementation status

Primary examinations for the Age 25 Survey started in May 2017 for those who turned 25 years old in FY2017 (those born between FY1992 and FY1995), of whom 8,163 (9.3\%) participated.

Results of 8,114 participants ( $99.4 \%$ of 8,163 ) have been finalized and individual results reports have been sent to them.

Of these, 3,464 (42.7\%) had Grade A1 results, 4,236 (52.2\%) had Grade A2, 414 (5.1\%) had Grade B, and none had Grade C.

[^13]2.1-2 Comparison with previous examination results

Comparison of results of the Age 25 Survey and previous surveys is shown in Table 3.
Among 4,973 participants with Grade A1 or A2 results in the previous survey, 4,837 (97.3\%) had Grade A1 or A2 results and 136 (2.7\%) had Grade B results in the Age 25 Survey.

Among 164 participants with Grade B results in the previous survey, 44 (26.8\%) had Grade A (A1 or A2) results and 120 ( $73.2 \%$ ) had Grade B results in the Age 25 Survey.

Table 3 Comparison with the previous survey results

* Previous survey results of participants with finalized Age 25 Survey results(person)
** Results of the Age 25 Survey participants who were diagnosed with each grade in the previous survey. Lower figures in parentheses are their proportion (\%).

### 2.2 Results of the Confirmatory Examination

## 2.2-1 Implementation status

Of 414 eligible persons, 328 (79.2\%) participated, of whom 304 ( $92.7 \%$ ) completed the entire process of the confirmatory examination.

Of the aforementioned 304 participants, 23 (7.6\%) were confirmed to meet Grade A diagnostic criteria by primary examination standards ( 2 A1 and 21 A2, including those with other thyroid conditions). The remaining 281 ( $92.4 \%$ ) were confirmed to be outside of A1/A2 criteria.

## 2.2-2 Results of fine needle aspiration cytology (FNAC)

Among those who underwent FNAC, 13 had nodules classified as malignant or suspicious for malignancy: 4 of them were male and 9 were female.

Participants' age at the time of the confirmatory examination ranged from 24 to 27 years (mean age: $25.3 \pm$ 0.8 years). The minimum and maximum tumor diameters were 6.2 mm and 49.9 mm . Mean tumor diameter was $16.9 \pm 12.9 \mathrm{~mm}$.

Of these 13 participants, 2 had Grade A2 results and 3 had Grade B results in the previous survey. The remaining 8 people did not participate in the previous survey.

Table 5. Results of FNAC
Among those who underwent the Age 25 Survey:

- Malignant or suspicious for malignancy: 13*
- Male to female ratio: 4:9
- Mean age $\pm$ SD (min - max): $\quad 25.3 \pm 0.8(24-27)$,
$16.5 \pm 1.0(15-18)$ at the time of disaster
- Mean tumor size $\pm$ SD (min - max): $\quad 16.9 \pm 12.9 \mathrm{~mm}(6.2-49.9 \mathrm{~mm})$
* Surgical cases are as shown in Appendix 2.
2.2-3 Age distribution of malignant or suspicious-for-malignancy cases diagnosed by FNAC Age distribution of 13 people with malignant or suspicious nodules based on their age as of March 11, 2011 is per Fig. 2, and age distribution based on their age at the time of confirmatory examination is per Fig. 3.

Fig. 2 Age as of March 11, 2011
Note: Those aged -1 through 13 at the time of disaster are not included among participants of the Age 25 survey that covers those born in FY1992 through FY1995.
The horizontal axis begins at -1 to include Fukushima Prefecture residents born between April 2, 2011 and April 1, 2012.
*Those born between March 12 and April 1, 2011 are categorized as age 0.

Fig. 3 Age at the time of confirmatory examination
2.2-4 Basic Survey results of those with malignant or suspicious nodules by FNAC Of the 13 people with malignant or suspicious nodules, 7 people (53.8\%) had participated in the Basic Survey (for external radiation dose estimation), and all 7 received their results. The highest effective dose documented was 1.8 mSv .

Table 6 A breakdown of dose estimates for Basic Survey participants

| Effective dose (mSv) | Age at the time of the disaster |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 0-5 |  | 6-10 |  | 11-15 |  | 16-18 |  | Total |  |
|  | Male | Female | Male | Female | Male | Female | Male | Female | Male | Female |
| <1 | 0 | 0 | 0 | 0 | 0 | 0 | 1 | 2 | 1 | 2 |

## 2.2-5 Blood and urinary iodine test result

Table 7 Blood test results

|  | $\mathrm{FT4}^{1)}$ <br> $(\mathrm{ng} / \mathrm{dL})$ | $\mathrm{FT3}^{2)}$ <br> $(\mathrm{pg} / \mathrm{mL})$ | $\mathrm{TSH}^{3)}$ <br> $(\mu \mathrm{IU} / \mathrm{mL})$ | $\mathrm{Tg}^{4)}$ <br> $(\mathrm{ng} / \mathrm{mL})$ | $\mathrm{TgAb}^{5)}$ <br> $(\mathrm{IU} / \mathrm{mL})$ | $\mathrm{TP0Ab}$ <br> $(\mathrm{IU} / \mathrm{mL})$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Reference Range | $0.95-1.74^{7)}$ | $2.13-4.07^{7)}$ | $0.340-3.880^{7)}$ | $\leq 33.7$ | $<28.0$ | $<16.0$ |
| Malignant or <br> suspicious: 13 | $1.2 \pm 0.2(7.7 \%)$ | $3.4 \pm 0.5(15.4 \%)$ | $1.6 \pm 1.4(15.4 \%)$ | $45.0 \pm 43.6(53.8 \%)$ | $7.7 \%$ | $0.0 \%$ |
| Other: 281 | $1.2 \pm 0.2(5.7 \%)$ | $3.2 \pm 0.5(7.1 \%)$ | $1.1 \pm 0.7(7.5 \%)$ | $47.1 \pm 180.7(24.2 \%)$ | $9.6 \%$ | $10.7 \%$ |

Table 8 Urinary iodine test results

|  | Minimum | 25th percentile | Median | 75th percentile | Maximum |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{array}{rr} \hline \text { Malignant or } \\ \text { suspicious: } \end{array} \quad 13$ | 73 | 111 | 156 | 276 | 953 |
| 0ther: 278 | 29 | 117 | 182 | 323 | 11,060 |

1) FT4: free thyroxine; thyroid hormone binding 4 iodines; higher among patients with thyrotoxicosis (such as Graves' disease) and lower with hypothyroidism (such as Hashimoto's thyroiditis).
2) FT3: free triiodothyronine; thyroid hormone binding 3 iodines; higher among patients with thyrotoxicosis (such as Graves' disease) and lower with hypothyroidism (such as Hashimoto's thyroiditis).
3) TSH: thyroid-stimulating hormone; higher among patients with Hashimoto's disease and lower with Graves' disease.
4) Tg: thyroglobulin; higher when thyroid tissue is destroyed or when neoplastic tissue produces thyroglobulin.
5) TgAb: anti-thyroglobulin antibody; higher among patients with Hashimoto's disease and Graves' disease.
6) TPOAb: anti-thyroid peroxidase antibody; higher among patients with Hashimoto's disease or Graves' disease.
7) Reference interval varies according to age.

## 3 Mental Health Care

### 3.1 Support for Primary Examination Participants

Since April 2017, medical doctors offer person-to-person explanations on examination results, showing ultrasound images in private consultation booths at examination venues set up in public facilities. As of September 30, 2021, 611 of 612 participants ( $99.8 \%$ ) visited these consultation booths.

### 3.2 Support for Confirmatory Examination Participants

A support team has been set up within Fukushima Medical University to offer psychological support to address the anxieties and concerns of confirmatory examination participants during examination. The team also answers questions and offers counseling via our website.

Since the start of the Age 25 survey, 100 participants ( 24 males and 76 females) have received support as of September 30, 2021. The number of support sessions provided was 187 in total. Of these, 100 sessions (53.5\%) were offered at the participants' first examination and 87 ( $46.5 \%$ ) at subsequent examinations.

For those who proceeded to regular health insurance medical care, the support team continues to provide support in cooperation with teams of medical staff at hospitals.

## Appendix 2

Surgical cases for malignancy or suspicion of malignancy
Among those who underwent the Age 25 Survey:

- Malignant or suspicious for malignancy: 13 (6 surgical cases: 5 papillary thyroid carcinomas, 1 follicular thyroid carcinoma)

[^0]:    *1 Municipal health checks conducted in the prefecture by the county/municipal medical association or medical facilities
    *2 Municipal health checks conducted outside the prefecture by cooperating facilities

[^1]:    *Eligible persons were divided into "in the prefecture" and "outside the prefecture" based on the mailing address to which health check invitations were sent. This method of division is different from that of dividing participants by health check type or by venue.

[^2]:    * Average value $\pm$ standard deviation
    * By international consensus, red blood cell counts are expressed as numbers $\times 10^{12} / \mathrm{L}$ or $\times 10^{6} / \mu \mathrm{L}$ ).

    Source: Clinical Management of Laboratory Data in Pediatrics 2017 (2 $2^{\text {nd }}$ edition)

[^3]:    *By international consensus, platelet counts are expressed as numbers $\times 10^{9} / \mathrm{L}$ or $\times 10^{3} / \mu \mathrm{L}$. Source: Clinical Management of Laboratory Data in Pediatrics 2017 (2 $2^{\text {nd }}$ edition)

[^4]:    * By international consensus, white blood cell counts are expressed as numbers $\times 10^{9} / \mathrm{L}$ or $\times 10^{3} / \mu \mathrm{L}$ ).

[^5]:    Source: Japan Atherosclerosis Society (JAS) Guidelines for Prevention of Atherosclerotic Cardiovascular Diseases 2017

[^6]:    < Supplementary Notes >

    * Participants aged 16 or older were divided into three age groups: 16 to 39 years, 40 to 64 years, and 65 years or older, with results compiled and shown accordingly.
    * Because individuals shift from one age group to another, year-by-year comparisons are difficult, and definitive conclusions cannot be drawn.
    * Rules for describing tabulation results are the same as those used for Vital Statistics in Japan by the Ministry of Health, Labour and Welfare.

    When there is no data: -
    When the ratio is minor (lower than 0.05): $0.0 \%$

    FY2015: Material 3-2 "Basic Statistics of CHC Results by Health Check Item" for the 26th Prefectural Oversight Committee Meeting for the Fukushima Health Management Survey
    FY2016: Material 2-3 "Basic Statistics of CHC Results by Health Check Item" for the 30th Prefectural Oversight Committee Meeting for the Fukushima Health Management Survey
    FY2017: Material 2-3 "Basic Statistics of CHC Results by Health Check Item" for the 34th Prefectural Oversight Committee Meeting for the Fukushima Health Management Survey
    FY2018: Material 4-4 "Tabulation Results by Health Check Item" for the 37th Prefectural Oversight Committee Meeting for the Fukushima Health Management Survey
    FY2019: Material 3-4 "Tabulation Results by Health Check Item" for the 41st Prefectural Oversight Committee Meeting for the Fukushima Health Management Survey

[^7]:    BMI = Weight (kg) / Height (m) / Height (m)

[^8]:    Source: "Guidelines for the Prevention of Arteriosclerotic Diseases 2017" by the Japan Atherosclerosis Society

[^9]:    *1 Support ended after listening carefully and helping the mother sort out her problems.
    *2 Support ended after providing information on relevant municipal departments and other useful information.
    *3 Support ended after confirming that the mother had already seen a doctor or has someone to consult with.

[^10]:    * Multiple answers were allowed. The denominator for percentage calculations is 248, the total number of those who wrote in the free comment section.

[^11]:    - Age groups are formed with the age as of April 1 of each fiscal year.

[^12]:    * Surgical cases are as shown in Appendix 6.

[^13]:    * Percentages are rounded to one decimal place. This applies to other tables
    **The number of persons eligible for and receiving examination of Age 25 Survey will be added for each fiscal year from now on.
